

LDO Regulator, 300 mA, Low Dropout Voltage, Ultra Low Noise, High PSRR with Power Good

ON Semiconductor®

www.onsemi.com

NCP164C

The NCP164C is a 300 mA LDO, next generation of high PSRR, ultra-low noise and low dropout regulators with Power Good open collector output. Designed to meet the requirements of RF and sensitive analog circuits, the NCP164C device provides ultra-low noise, high PSRR and low quiescent current. The device also offer excellent load/line transients. The NCP164C is designed to work with a 1 μ F input and a 1 μ F output ceramic capacitor. It is available in industry standard TSOP-5, WDFN6 0.65P, 2 mm x 2 mm and DFNW8 0.65P, 3 mm x 3 mm.

Features

- Operating Input Voltage Range: 1.6 V to 5.0 V
- Available in Fixed Voltage Option: 1.2 V to 4.5 V
- Adjustable Version Reference Voltage: 1.1 V
- $\pm 2\%$ Accuracy Over Load and Temperature
- Ultra Low Quiescent Current Typ. 30 μ A
- Standby Current: Typ. 0.1 μ A
- Very Low Dropout: 110 mV at 300 mA for 3.3 V Variant
- Ultra High PSRR: Typ. 85 dB at 10 mA, $f = 1$ kHz
- Ultra Low Noise: 9 μ V_{RMS} (Fixed Version)
- Stable with a 1 μ F Small Case Size Ceramic Capacitors
- Available in – TSOP-5 3 mm x 1.5 mm x 1 mm CASE 483
 - ♦ WDFN6 2 mm x 2 mm x 0.75 mm CASE 511BR
 - ♦ DFNW8 3 mm x 3 mm x 0.9 mm CASE 507AD
- These Devices are Pb-Free, Halogen Free/BFR Free and are RoHS Compliant

Typical Applications

- Communication Systems
- In-Vehicle Networking
- Telematics, Infotainment and Clusters
- General Purpose Automotive

PIN CONNECTONS

ORDERING INFORMATION

See detailed ordering and shipping information on page 8 of this data sheet.

NCP164C

Table 1. PIN FUNCTION DESCRIPTION

Pin No. TSOP-5	Pin No. WDFN6	Pin No. DFNW8	Pin Name	Description
1	6	8	IN	Input voltage supply pin
5	1	1	OUT	Regulated output voltage. The output should be bypassed with small 1 μ F ceramic capacitor
3	4	7	EN	Chip enable: Applying $V_{EN} < 0.2$ V disables the regulator, Pulling $V_{EN} > 0.7$ V enables the LDO
4 / -	3	3	PG	Power Good, open collector. Use 10 k Ω to 100 k Ω pull-up resistor connected to output or input voltage
2	5	6	GND	Common ground connection
- / 4	2	2	ADJ	Adjustable output feedback pin (for adjustable version only)
-	2	2	SNS	Sense feedback pin. Must be connected to OUT pin on PCB (for fixed versions only)
-	-	4, 5	N/C	Not connected, pin can be tied to ground plane for better power dissipation
-	EPAD	EPAD	EPAD	Expose pad should be tied to ground plane for better power dissipation

Table 2. ABSOLUTE MAXIMUM RATINGS

Rating	Symbol	Value	Unit
Input Voltage (Note 1)	V_{IN}	-0.3 to 5.3	V
Output Voltage	V_{OUT}	-0.3 to $V_{IN}+0.3$, max. 5.3	V
Chip Enable Input	V_{CE}	-0.3 to 5.3	V
Power Good Voltage	V_{PG}	-0.3 to 5.3	V
Power Good Current	I_{PG}	30	mA
Output Short Circuit Duration	t_{SC}	unlimited	s
Maximum Junction Temperature	T_J	150	$^{\circ}$ C
Storage Temperature	T_{STG}	-55 to 150	$^{\circ}$ C
ESD Capability, Human Body Model (Note 2)	ESD_{HBM}	2000	V
ESD Capability, Charged Device Model (Note 2)	ESD_{CDM}	1000	V

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

1. Refer to ELECTRICAL CHARACTERISTICS and APPLICATION INFORMATION for Safe Operating Area.
2. This device series incorporates ESD protection and is tested by the following methods:
 ESD Human Body Model tested per AEC-Q100-002 (EIA/JESD22-A114)
 ESD Charged Device Model tested per EIA/JESD22-C101, Field Induced Charge Model

	Temperature hysteresis		T_{HYST}		15		$^{\circ}\text{C}$
Active output discharge resistance	$V_{EN} < 0.2\text{ V}$, Version A only		R_{DIS}		260		Ω

Product parametric performance is indicated in the Electrical Characteristics for the listed test conditions, unless otherwise noted. Product performance may not be indicated by the Electrical Characteristics if operated under different conditions.

5. Performance guaranteed over the indicated operating temperature range by design and/or characterization.

Production tested at $T_J = T_A = 25^{\circ}\text{C}$.

6. Low duty cycle pulse techniques are used during the testing to maintain the junction temperature as close to ambient as possible. Dropout voltage is characterized when V_{OUT} falls 3% below $V_{OUT(NOM)}$.

7. Guaranteed by design and characterization.

APPLICATIONS INFORMATION

The NCP164C is the member of new family of high output current and low dropout regulators which delivers low quiescent and ground current consumption, good noise and power supply ripple rejection ratio performance. The NCP164C incorporates EN pin and power good output for simple controlling by MCU or logic. Standard features include current limiting, soft-start feature and thermal protection.

Input Decoupling (C_{IN})

It is recommended to connect at least $1\ \mu\text{F}$ ceramic X5R or X7R capacitor between IN and GND pin of the device. This capacitor will provide a low impedance path for any unwanted AC signals or noise superimposed onto constant input voltage. The good input capacitor will limit the influence of input trace inductances and source resistance during sudden load current changes. Higher capacitance and lower ESR capacitors will improve the overall line transient response.

Output Decoupling (C_{OUT})

The NCP164C does not require a minimum Equivalent Series Resistance (ESR) for the output capacitor. The device is designed to be stable with standard ceramics capacitors with values of $1\ \mu\text{F}$ or greater. The X5R and X7R types have the lowest capacitance variations over temperature thus they are recommended.

Power Good Output Connection

The NCP164C include Power Good functionality for better interfacing to MCU system. Power Good output is open collector type, capable to sink up to $10\ \text{mA}$. Recommended operating current is between $10\ \mu\text{A}$ and

$1\ \text{mA}$ to obtain low saturation voltage. External pull-up resistor can be connected to any voltage up to $5.0\ \text{V}$ (please see Absolute Maximum Ratings table).

Power Dissipation and Heat Sinking

The maximum power dissipation supported by the device is dependent upon board design and layout. Mounting pad configuration on the PCB, the board material, and the ambient temperature affect the rate of junction temperature rise for the part. For reliable operation junction temperature should be limited to $+125^\circ\text{C}$, however device is capable to work up to junction temperature $+150^\circ\text{C}$. The maximum power dissipation the NCP164C can handle is given by:

$$P_{D(\text{MAX})} = \frac{[T_{J(\text{MAX})} - T_A]}{R_{\theta\text{JA}}} \quad (\text{eq. 1})$$

The power dissipated by the NCP164C for given application conditions can be calculated from the following equations:

$$P_D \approx V_{IN}(I_{\text{GND}} + I_{\text{OUT}}) + I_{\text{OUT}}(V_{IN} - V_{\text{OUT}}) \quad (\text{eq. 2})$$

or

$$V_{IN(\text{MAX})} \approx \frac{P_{D(\text{MAX})} + (V_{\text{OUT}} \times I_{\text{OUT}})}{I_{\text{OUT}} + I_{\text{GND}}} \quad (\text{eq. 3})$$

Hints

V_{IN} and GND printed circuit board traces should be as wide as possible. When the impedance of these traces is high, there is a chance to pick up noise or cause the regulator to malfunction. Place external components, especially the output capacitor, as close as possible to the NCP164C, and make traces as short as possible.

NCP164C

Adjustable Version

Not only adjustable version, but also any fixed version can be used to create adjustable voltage, where original fixed voltage becomes reference voltage for resistor divider and feedback loop. Output voltage can be equal or higher than original fixed option, while possible range is from 1.1 V up to 4.5 V. Figure 16 shows how to add external resistors to increase output voltage above fixed value.

Output voltage is then given by equation

$$V_{OUT} = V_{FIX} \times (1 + R1/R2) \quad (\text{eq. 4})$$

Figure 16. Adjustable Variant Application

Please note that output noise is amplified by V_{OUT} / V_{FIX} ratio. For example, if original 1.2 V fixed variant is used to create 3.6 V output voltage, output noise is increased $3.6 / 1.2 = 3$ times and real value will be $3 \times 9 \mu\text{Vrms} = 27 \mu\text{Vrms}$. For noise sensitive applications it is recommended to use as

where V_{FIX} is voltage of original fixed version (from 1.2 V up to 4.5 V) or adjustable version (1.1 V). Do not operate the device at output voltage about 4.7 V, as device can be damaged.

In order to avoid influence of current flowing into SNS pin to output voltage accuracy (SNS current varies with voltage option and temperature, typical value is 300 nA) it is recommended to use values of R1 and R2 below 500 k Ω .

high fixed variant as possible – for example in case above it is better to use 3.3 V fixed variant to create 3.6 V output voltage, as output noise will be amplified only $3.6 / 3.3 = 1.09 \times (9.8 \mu\text{Vrms})$.

DESCRIPTION:	TSOP-5	PAGE 1 OF 1

ON Semiconductor and ON are trademarks of Semiconductor Components Industries, LLC dba ON Semiconductor or its subsidiaries in the United States and/or other countries. ON Semiconductor reserves the right to make changes without further notice to any products herein. ON Semiconductor makes no warranty, representation or guarantee regarding the suitability of its products for any particular purpose, nor does ON Semiconductor assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation special, consequential or incidental damages. ON Semiconductor does not convey any license under its patent rights nor the rights of others.

MECHANICAL CASE OUTLINE

PACKAGE DIMENSIONS

ON Semiconductor®

SCALE 2:1

DFNW8 3x3, 0.65P
CASE 507AD
ISSUE A

DATE 15 JUN 2018

- NOTES:
- DIMENSIONING AND TOLERANCING PER ASME Y14.5M, 1994.
 - CONTROLLING DIMENSION: MILLIMETERS.
 - DIMENSION b APPLIES TO PLATED TERMINAL AND IS MEASURED BETWEEN 0.15 AND 0.30mm FROM THE TERMINAL TIP.
 - COPLANARITY APPLIES TO THE EXPOSED PAD AS WELL AS THE TERMINALS.
 - THIS DEVICE CONTAINS WETTABLE FLANK DESIGN FEATURE TO AID IN FILLET FORMATION ON THE LEADS DURING MOUNTING.

MILLIMETERS			
DIM	MIN	NOM	MAX
A	0.80	0.90	1.00
A1	---	---	0.05
A3	0.20 REF		
A4	0.10	---	---
b	0.25	0.30	0.35
D	2.90	3.00	3.10
D2	2.30	2.40	2.50
E	2.90	3.00	3.10
E2	1.55	1.65	1.75
e	0.65 BSC		
K	0.28 REF		
L	0.30	0.40	0.50
L3	0.05 REF		

GENERIC MARKING DIAGRAM*

- XXXXXX = Specific Device Code
- A = Assembly Location
- L = Wafer Lot
- Y = Year
- W = Work Week
- = Pb-Free Package

(Note: Microdot may be in either location)

*This information is generic. Please refer to device data sheet for actual part marking. Pb-Free indicator, "G" or microdot "▪", may or may not be present. Some products may not follow the Generic Marking.

RECOMMENDED SOLDERING FOOTPRINT*

*For additional information on our Pb-Free strategy and soldering details, please download the ON Semiconductor Soldering and Mounting Techniques Reference Manual, SOLDERRM/D.
