

**THE DATASHEET OF
SG7824AK-DESC**

Positive Fixed Voltage Regulator

Description

The SG78xxA/SG78xx series of positive regulators offer self-contained, fixed-voltage capability with up to 1.5 A of load current and input voltage up to 50 V (SG78xxA series only). These units feature a unique on-chip trimming system to set the output voltages to within $\pm 1.5\%$ of nominal on the SG78xxA series with $\pm 2.0\%$ on the SG78xx series. The SG78xxA versions also offer much improved line and load regulation characteristics. Utilizing an improved bandgap reference design, problems such as drift in output voltage and large changes in the line and load regulation, that are normally associated with the Zener diode references have been eliminated.

All protective features of thermal shutdown, current limiting, and safe-area control have been designed into these units and since these regulators require only a small output capacitor for satisfactory performance, ease of application is assured. Although designed as fixed-voltage regulators, the output voltage can be increased through the use of a simple voltage divider. The low quiescent drain current of the device ensures good regulation when this method is used. Product is available in hermetically sealed TO-257 (both case grounded 'G' and isolated 'IG'), TO-3, TO-39 and leadless chip carrier (LCC) packages.

Features

- Output Voltage Set Internally to $\pm 1.5\%$ on SG78xxA
- Input Voltage Range to 50 V max on SG78xxA
- 2 V Input-Output Differential
- Excellent Line and Load Regulation
- Fold back Current Limiting
- Thermal Overload Protection
- Voltages Available: 5 V, 12 V, 15 V
- Contact Factory for Other Voltage Options
- Available in Surface Mount Package

High Reliability Features

- Available to MIL-STD - 883, ¶ 1.2.1
- MIL-M38510/10702BXA - SG7805T-JAN
- MIL-M38510/10703BXA - SG7812T-JAN
- MIL-M38510/10704BXA - SG7815T-JAN
- MIL-M38510/10706BYA - SG7805K-JAN
- MIL-M38510/10707BYA - SG7812K-JAN
- MIL-M38510/10708BYA - SG7815K-JAN
- MSC-AMSG level "S" Processing Available
- Available to DSCC
- Standard Microcircuit Drawing (SMD)

Notes:

1. Contact factory for JAN and DESC product availability.
2. All parts are viewed from the top.
3. “xx” to be replaced by output voltage of specific fixed regulator.
4. Some products will be available in hermetic flat pack (F). Consult factory for price and availability.
5. Both inputs and outputs must be externally connected together at the device terminals.
6. For normal operation, the V_O SENSE pin must be externally connected to the load.

Absolute Maximum Ratings

| Parameter | Value | Units |
|---|------------|-------|
| Device Output Voltage | 5, 12, 15 | V |
| Input Voltage | 35 | V |
| Input Voltage (Transient) (Note 2) | 50 | V |
| Input Voltage Differential (Output Shorted to Ground) | 35 | V |
| Operating Junction Temperature | 150 | °C |
| Storage Temperature Range | -65 to 150 | °C |
| Lead Temperature (Soldering 10 seconds) | 300 | °C |

Notes:

1. Exceeding these ratings could cause damage to the device. All voltages are with respect to Ground. Currents are positive into, negative out of specified terminal.
2. Operation at high input voltages is dependent upon load current. When load current is less than 5 mA, output will rise out of regulation as input-output differential increases beyond 30 V. Note also from [Figure 2](#), that maximum load current is reduced at high voltages. The 50 V input rating of the SG78xxA series refers to ability to withstand high line or transient conditions without damage. Since the regulator’s maximum current capability is reduced, the output may fall out of regulation at high input voltages under nominal loading.

Thermal Data

| Parameter | Value | Units |
|--|-------|-------|
| K Package TO-3 3-Terminal Metal Can (Two pins and case) | | |
| Thermal Resistance-Junction to Case, θ_{JC} | 3 | °C/W |
| Thermal Resistance-Junction to Ambient, θ_{JA} | 35 | °C/W |
| T Package TO-39 3-Pin Metal Can | | |
| Thermal Resistance-Junction to Case, θ_{JC} | 15 | °C/W |
| Thermal Resistance-Junction to Ambient, θ_{JA} | 120 | °C/W |
| G Package TO-257 3-Pin Hermetic | | |
| Thermal Resistance-Junction to Case, θ_{JC} | 3.5 | °C/W |
| Thermal Resistance-Junction to Ambient, θ_{JA} | 42 | °C/W |
| IG Package TO-257 3-Pin Hermetic (Isolated) | | |
| Thermal Resistance-Junction to Case, θ_{JC} | 4 | °C/W |
| Thermal Resistance-Junction to Ambient, θ_{JA} | 42 | °C/W |
| L Package Leadless Chip Carrier 20-Pin Ceramic | | |
| Thermal Resistance-Junction to Case, θ_{JC} | 35 | °C/W |
| Thermal Resistance-Junction to Ambient, θ_{JA} | 120 | °C/W |
| <i>Notes:</i> | | |
| 1. <i>Junction Temperature Calculation: $T_J = T_A + (P_D \times \theta_{JA})$.</i> | | |
| 2. <i>The θ_{JA} numbers are meant to be guidelines for the thermal performance of the device/pc-board system. All of the above assume no ambient airflow.</i> | | |

Recommended Operating Conditions

| Parameter | SG78xx / 78xxA | | | Units |
|---|----------------|-----|-----|-------|
| | Min | Typ | Max | |
| Operating Junction Temperature Range | -55 | | 150 | °C |
| <i>Note: Range over which the device is functional.</i> | | | | |

Electrical Characteristics

Unless specified, these specifications apply over the operating ambient temperatures for SG7805A / SG7805 with $-55\text{ }^{\circ}\text{C} \leq T_A \leq 125\text{ }^{\circ}\text{C}$, $V_{IN} = 10\text{ V}$, $I_O = 500\text{ mA}$ for the K, G, and IG – Power Packages, $I_O = 100\text{ mA}$ for the T and L packages, $C_{IN} = 0.33\text{ }\mu\text{F}$ and $C_{OUT} = 0.1\text{ }\mu\text{F}$. Low duty cycle pulse testing techniques are used, which maintains junction and case temperatures equal to the ambient temperature.

| Parameter | Test Conditions | SG7805A | | | SG7805 | | | Units |

Microsemi Corporation (Nasdaq: MSCC) offers a comprehensive portfolio of semiconductor and system solutions for communications, defense & security, aerospace and industrial markets. Products include high-performance and radiation-hardened analog mixed-signal integrated circuits, FPGAs, SoCs and ASICs; power management products; timing and synchronization devices and precise time solutions, setting the world's standard for time; voice processing devices; RF solutions; discrete components; security technologies and scalable anti-tamper products; Power-over-Ethernet ICs and midspans; as well as custom design capabilities and services. Microsemi is headquartered in Aliso Viejo, Calif., and has approximately 3,400 employees globally. Learn more at www.microsemi.com.

Microsemi makes no warranty, representation, or guarantee regarding the information contained herein or the suitability of its products and services for any particular purpose, nor does Microsemi assume any liability whatsoever arising out of the application or use of any product or circuit. The products sold hereunder and any other products sold by Microsemi have been subject to limited testing and should not be used in conjunction with mission-critical equipment or applications. Any performance specifications are believed to be reliable but are not verified, and Buyer must conduct and complete all performance and other testing of the products, alone and together with, or installed in, any end-products. Buyer shall not rely on any data and performance specifications or parameters provided by Microsemi. It is the Buyer's responsibility to independently determine suitability of any products and to test and verify the same. The information provided by Microsemi hereunder is provided "as is, where is" and with all faults, and the entire risk associated with such information is entirely with the Buyer. Microsemi does not grant, explicitly or implicitly, to any party any patent rights, licenses, or any other IP rights, whether with regard to such information itself or anything described by such information. Information provided in this document is proprietary to Microsemi, and Microsemi reserves the right to make any changes to the information in this document or to any products and services at any time without notice.
