**SG1846F**

# Current Mode PWM Controller

## Description

The SG1846 family of control ICs provides the required features to implement Fixed Frequency, Current mode control schemes while maintaining a minimum external parts count. The advanced performance of this technique can be measured in improved line regulation, enhanced load response characteristics, and a simpler, easier-to-design control loop. Topological advantages include, inherent pulse-by-pulse current limiting capability, automatic symmetry correction for push-pull converters, and the ability to parallel “power modules” while maintaining equal current sharing.

Protection circuitry includes built-in under-voltage lockout and programmable current limit in addition to soft start capability. A shutdown function is also available which can initiate either a complete shutdown with automatic restart, or latch the supply off.

Other features include fully latched operation, double-pulse suppression, dead-time adjust capability, and a  $\pm 1\%$  trimmed bandgap reference.

## Features

- Automatic Feed-forward Compensation
- Programmable Pulse by Pulse Current Limiting
- Automatic Symmetry Correction in Push-pull Configuration
- Enhanced Load Response Characteristics
- Parallel Operation Capability for Modular Power Systems
- Differential Current Sense Amplifier with Wide Common-mode Range
- Double Pulse Suppression
- 200mA Totem-pole Outputs
- $\pm 1\%$  Bandgap Reference
- Under-voltage Lockout
- Soft-start and Shutdown Capability
- 500kHz Operation

## High Reliability Features

- Available To MIL-STD-883 – 883, ¶ 1.2.1
- Available to DSCC
  - Standard Microcircuit Drawing (SMD)
- SGR1846 Rad-Tolerant Version Available

## Block Diagram

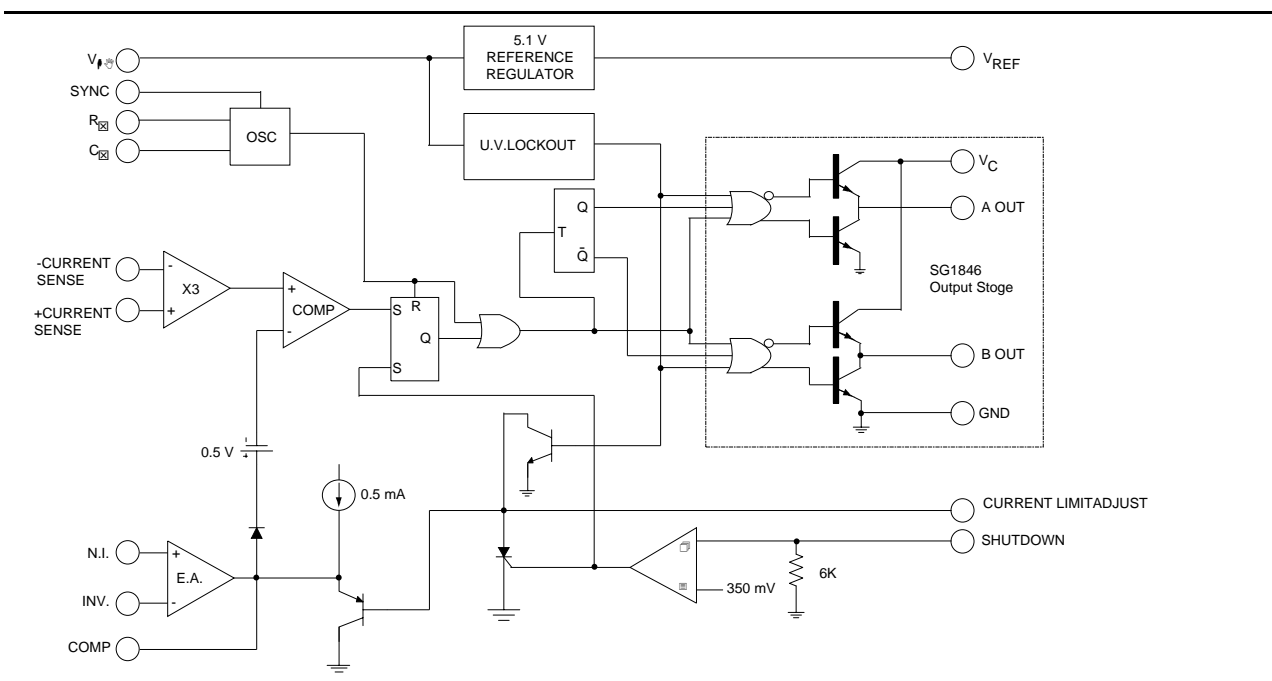

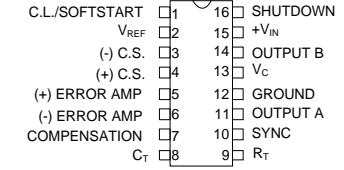

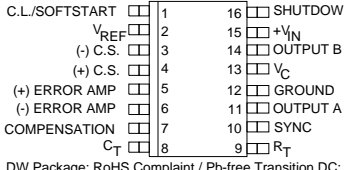

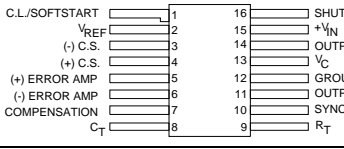

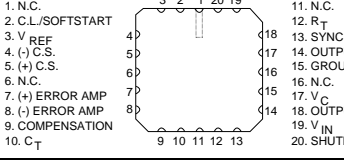

Figure 1 - Block Diagram

## Connection Diagrams and Ordering Information

## Absolute Maximum Ratings

Parameter	Value	Units
Supply Voltage (+V <sub>IN</sub> )	40	V
Collector Supply Voltage(V <sub>C</sub> )	40	V
Analog Inputs (Pins 3, 4, 5, 6, and 16)	-0.3V to +V <sub>IN</sub>	V
Logic Input	-0.3V to 5.5V	V
Source/Sink Load current (continuous)	200	mA
Source/Sink Load Current (peak, 200 ns)	500	mA
Reference Load Current	30	mA
Soft Start Sink Current	50	mA
Sync Output Current	5	mA
Error Amplifier Output Current	5	mA
Oscillator Charging current (Pin 9)	5	mA

Parameter	Value	Units
Operating Junction Temperature Hermetic (J, L, F Packages)	150	°C
Operating Junction Temperature Plastic (N, DW Package)	150	°C
Storage Temperature Range	-65 to 150	°C
Lead Temperature (Soldering, 10 Seconds)	300	°C
RoHS Peak Package Solder Reflow Temp. (40 sec. max. exp.)	260 (+0, -5)	°C
1. Values beyond which damage may occur. 2. Pin numbers refer to ceramic J package.		

## Thermal Data

Parameter	Value	Units
<b>J Package:</b>		
Thermal Resistance-Junction to Case, $\theta_{JC}$	30	°C/W
Thermal Resistance-Junction to Ambient, $\theta_{JA}$	80	°C/W
<b>N Package:</b>		
Thermal Resistance-Junction to Case, $\theta_{JC}$	40	°C/W
Thermal Resistance-Junction to Ambient, $\theta_{JA}$	65	°C/W
<b>DW Package:</b>		
Thermal Resistance-Junction to Case, $\theta_{JC}$	40	°C/W
Thermal Resistance-Junction to Ambient, $\theta_{JA}$	95	°C/W
<b>F Package:</b>		
Thermal Resistance-Junction to Case, $\theta_{JC}$	70	°C/W
Thermal Resistance-Junction to Ambient, $\theta_{JA}$	115	°C/W
<b>L Package:</b>		
Thermal Resistance-Junction to Case, $\theta_{JC}$	35	°C/W
Thermal Resistance-Junction to Ambient, $\theta_{JA}$	120	°C/W
<b>Notes:</b> 1. Junction Temperature Calculation: $T_J = T_A + (P_D \times \theta_{JA})$ . 2. The above numbers for $\theta_{JC}$ are maximums for the limiting thermal resistance of the package in a standard mounting configuration. The $\theta_{JA}$ numbers are meant to be guidelines for the thermal performance of the device/PCBoard system. All of the above assume no ambient airflow.		

## Recommended Operating Conditions

Parameter	Value	Units
Supply Voltage Range	8 to 40	V
Collector Supply Voltage Range	4.5 to 40	V
Source/Sink Output Current (continuous)	100	mA
Source/Sink Output Current (peak 200ns)	200	mA
Reference Load Current	0 to 10	mA
Oscillator Frequency Range	1 to 500	kHz
Oscillator Timing Resistor ( $R_T$ )	2 to 100	k $\Omega$
Oscillator Timing Capacitor ( $C_T$ )	1 to 100	nF
<b>Operating Ambient Temperature Range</b>		
SG1846	55 to 125	°C
SG2846	25 to 85	°C
SG3846	0 to 70	°C
<b>Note:</b> Range over which the device is functional.		

## Electrical Characteristics

Unless otherwise specified, these specifications apply over the operating ambient temperatures for SG1846 with  $-55^{\circ}\text{C} \leq T_A \leq 125^{\circ}\text{C}$ , SG2846 with  $-25^{\circ}\text{C} \leq T_A \leq 85^{\circ}\text{C}$ , SG3846 with  $0^{\circ}\text{C} \leq T_A \leq 70^{\circ}\text{C}$ ,  $+V_{IN} = 15\text{V}$ . Low duty cycle pulse testing techniques are used which maintains junction and case temperatures equal to the ambient temperature.

# Application Information

**Figure 20** • Oscillator Frequency Curves

**Figure 21** • Oscillator Circuit

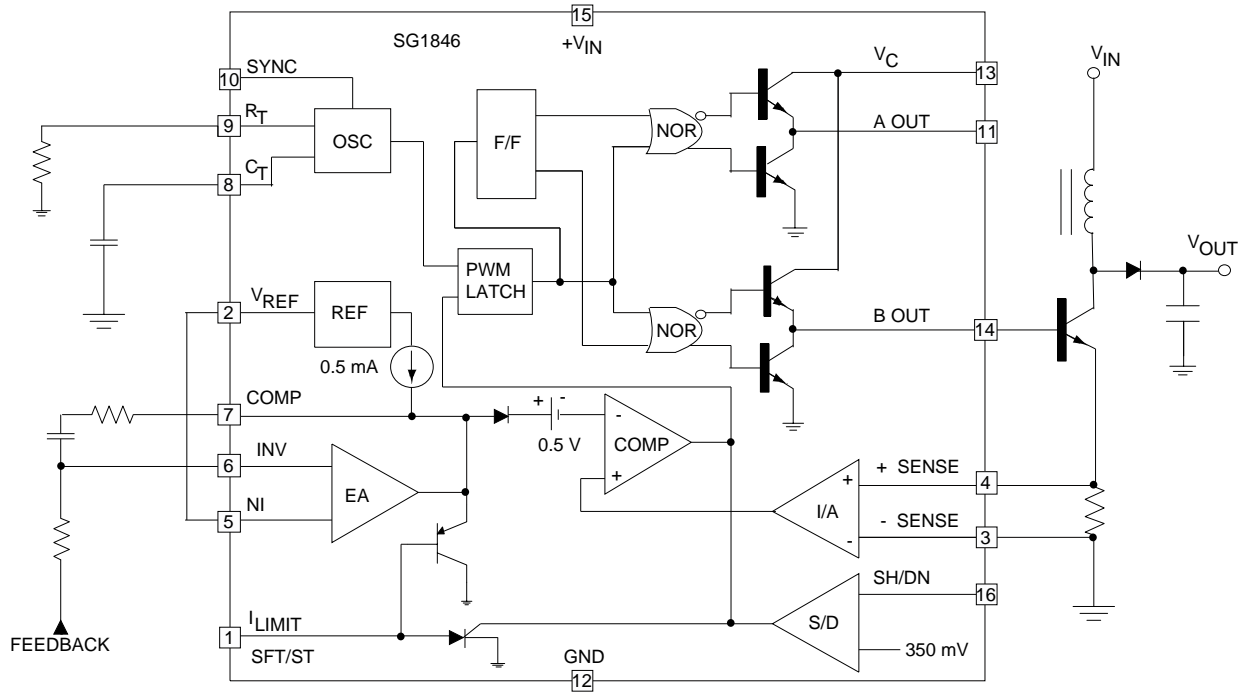

**Figure 22** - Error Amp Output Configuration (Error amplifier can source up to 0.5 mA)

**Figure 23** - Current Sense AMP Connections

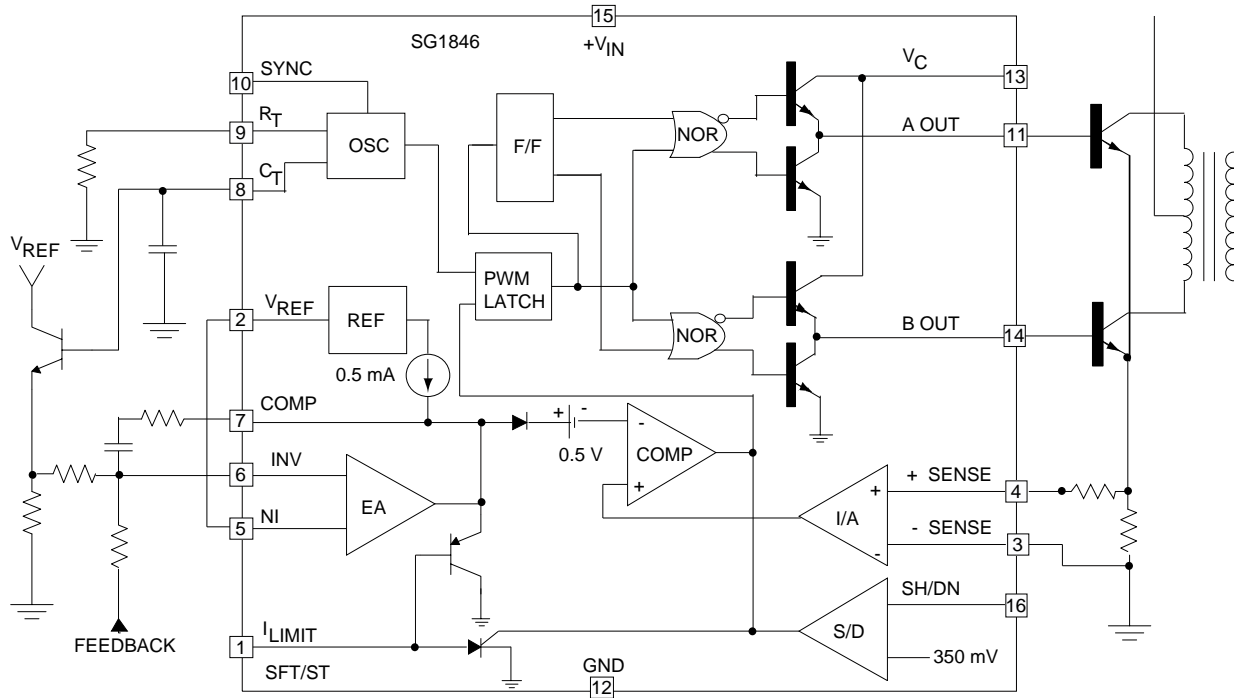

A small RC filter may be required in some applications to reduce switch transients. Differential input allows remote noise free switching.

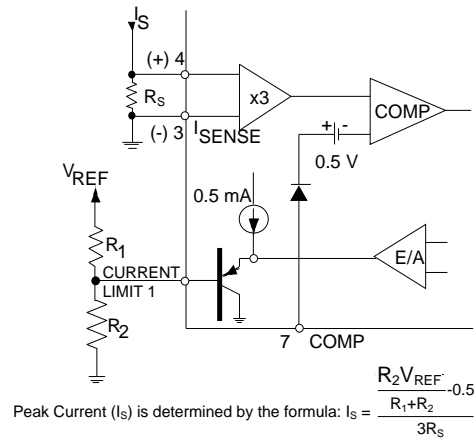

**Figure 24** - Single Ended Boost Configuration

**Figure 25** - Buck Converter with Current Sense Winding

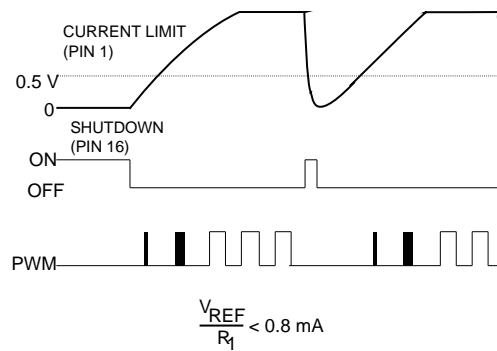

**Figure 26** • Push/Pull Converter with Slope Compensation

**Figure 27** • Pulse by Pulse Current Limiting

**Figure 28** - Soft Start and Shutdown/Restart Functions

**Figure 29** - Shutdown with Auto-Restart

If  $\frac{V_{REF}}{R_1} < 0.8 \text{ mA}$ , the shutdown latch commutates.  
when  $I_{SS} < 0.8 \text{ mA}$ , a restart cycle will be initiated.

**Figure 30** - Shutdown without Auto-Restart (Latched)

If  $\frac{V_{REF}}{R_1} > 3 \text{ mA}$ , the device will latch off until power is recycled.
