*1. The value is when both rated output voltage and rated output current are satisfied.

*2. Do not use an inverter output for the product. Inverters with an output frequency of 50/60 Hz are available, but the rise in the internal temperature of the product may result in ignition or burning.

If the input is connected to a UPS, do not connect a UPS with a square-wave output.

Doing so will cause the internal temperature of the product to increase, possibly causing smoking or burning.

*3. The value for the leakage current is determined according to the Electrical Appliances and Material Safety Act.

*4. If the output voltage adjuster (V. ADJ) is turned, the voltage will increase by more than 28 V min of the voltage adjustment range. When adjusting the output voltage, confirm the actual output voltage from the product and be sure that the load is not damaged.

*5. A characteristic when the ambient operating temperature of 25°C.

Engineering Data

480 W (S8VK-S48024) Horizontal separation: 15 mm or more

480 W (S8VK-S48024) Horizontal separation: Less than 15 mm

- Note: 1.** At less than 100 VAC, derate the load at 1%/V.
2. For a DC input, reduce the load given in the above derating curve by multiplying by the following coefficients.
 S8VK-S48024: 0.8
3. In the shaded area, time is required to reach the rated output voltage after the input voltage is applied.

- Note: 1.** Apply the rated voltage
2. In the shaded area, time is required to reach the rated output voltage after the input voltage is applied.
