## Manufacturing

CTS utilizes more than 120,000 square feet (11,150 square meters) of manufacturing space, dedicated to providing high quality EMI/RFI products.

In addition to the standard catalog items, CTS has numerous variations of these designs and can custom design a part to meet your particular specifications. CTS maintains a staff of highly skilled Customer Engineers to assist our customers in the design of custom products.

## Circuits Available in this Catalog

## Quality Objective

The timely delivery of quality products which exceed our customers' expectations through the use of effective teamwork and the process of continuous improvement.

## Meeting Customer Requirements

CTS is devoted to bringing the company's broad product line to an ever expanding world market.

CTS has more than five decades of efficient manufacturing expertise in its corporate heritage, and utilizes sophisticated equipment to provide customers with attractive pricing and full value for the products they purchase.

## Quality

Quality is the key ingredient in all our products with approval to MIL-PRF-15733, MIL-PRF-81 and MIL-C-11015. CTS maintains a fully approved Quality Assurance laboratory and relies heavily on Statistical Process Control to monitor critical operations.

The products listed in this catalog are only a few of the thousands of variations that CTS produces. For custom component design, please contact the factory direct. component design, please contact the factory direct.

## Providing Excellence in EMI/RFI Filtering Components...

**CTS** manufactures thousands of EMC

Products featuring an extensive line of EMI/RFI Filters and Capacitors.

We combine Technology, Expertise, Versatility and Innovation to produce the industry's most complete line of ceramic EMI/RFI Filters.

CTS draws upon its 50+ years of manufacturing expertise and an accumulated base of ceramic dielectric technology to provide an ever expanding line of EMI/RFI Filters and Capacitors.

CTS products not only set the industry standard but lead the way in the development of tomorrow's EMI Technology.

### How to use this Catalog

This Catalog identifies standard parts produced by CTS. Part numbers are listed in sections by mounting style (Solder Mount or Bushing Mount). Bushing parts are listed by circuit configuration and arranged in ascending order with respect to voltage rating at 125°C and then capacitance value.

#### FILTERS

Filters are assigned a four digit style number followed by a three digit variation number. (Example: 4100-003)

#### FEED-THRU CAPACITORS

Feed-thru capacitors are assigned a three or four digit style number followed by a three digit variation number, then the EIA Code for temperature characteristic, capacitance and tolerance. (Example: 2482-012-X5U0-272M)

For additional EIA Codes and Tolerances, please see page 25.

## Solder Mount C Filters

### TUSONIX 4300 Series Miniature EMI Filters

These filters are ideal for applications where small size and high performance are critical. These C configured filters can be glass sealed on either one of the ends for optimal sealing between system compartments or components.

The gold plating on the leads offers excellent conductivity and connective ability using common gold bonding methods. The small package and large range of electrical characteristics of the 4300 Series make it an effective solution for a variety of microwave applications.

## No Solder/Press-In C Filters

## 4304 Series - C Filters

Tusonix Press-In Ceramic EMI filters suppress unwanted EMI and allow a fast, mechanical bonding that is free from soldering. And, by offering an excellent alternative to the traditional soldering installation, these finely designed, knurled filters significantly reduce assembly costs.

These EMI filters cover a variety of voltage, attenuation and capacitance ranges in a press-in mounting style.

Product installation recommendations (X-2656/9) are provided with parts to prevent damage to the component during installation.

## #4-40 UNC-2A C & L Filters

### TUSONIX 4400 Series Miniature EMI Filters

These filters are ideal for applications where small size and high performance are critical and a threaded mounting technique is desired.

These C and L configured filters are available in two physical configurations and can be supplied with either unified or metric thread (see page 18 for metric). The small package and large range of electrical characteristics of the 4400 Series make it an effective solution for a variety of microwave applications.

### Characteristics

- Dimensions: Inches [metric]  
Dimensional Tolerance:  
± .005 [0.13], thread tolerance class 2.
- Standard finish: Silver
- Nut material: Brass  
Washer material: Phosphor Bronze
- When mounting filter without hardware, into tapped hole, the mounting torque applied to the filter body must be no more than 1/2 the torque limits listed on the chart to the left.

# Product Installation Recommendations and EIA codes

## PRODUCT INSTALLATION RECOMMENDATIONS

The components in this catalog are manufactured with ceramic dielectrics. To minimize possible damage to the components during installation, the recommendations below should be followed. For information concerning other installation requirements and/or component modifications, contact us.

### General Recommendations

- Handling:** Excessive force or direct impact to the component may result in breakage. Lead bending or cutting, if necessary, should be done with a support for the lead to prevent mechanical stress to the component. Components with required lead modifications are available.
- Lead Soldering:** Use a temperature controlled soldering iron with SN60 or SN63 RMA Flux core wire. Maximum soldering temperature to be 500°F(260°C) with a dwell time of 3 seconds maximum. The use of a heat sink between the component body and the solder joint is highly recommended.
- Flux Removal:** Optimum flux removal can be achieved by vapor degreasing the components immediately after the soldering operation. Total immersion of the components is not recommended.

### Solder Mount Recommendations

- Mounting:** Use a convection or infrared oven and SN60 or SN63 solder paste, or solder preforms, with RMA Flux. The oven profile should slowly heat the entire assembly to a reflow temperature of 430°F (221°C), with a rate of change not to exceed 5°F,3°C/Sec. and a dwell time as short as possible.
- Internal Electrode Soldering:** Use a temperature controlled soldering iron with SN62 silver bearing (2%) RMA Flux core solder wire. The components should be preheated to 300°F (150°C), then soldered with a maximum temperature of 500°F (260°C) and a dwell of 3 seconds maximum.

### Bushing Mount Recommendations

*For Mounting Torque, please see standard hardware dimensions table on page 24.*

◆GMV: TUSONIX Code: Guarantied Minimum Value

**Please note:** Maximum Capacitance for each part number is determined by the required operating temperature range and maximum capacitance change.

The products listed in this catalog are only a few of the thousands of variations that CTS produces. For custom component design, please contact the factory direct. component design, please contact the factory direct.

## General Test Specifications

The Components shown in this catalog have been designed and subjected to the following test plan, as is applicable for the individual components. The information shown can be used as a basis for component specifications. For additional information, please contact CTS.

Filters governed by MIL-PRF-15733 shall be inspected and tested to the requirements of the specification and the applicable specification (slash) sheet.

<b>LOT ACCEPTANCE INSPECTION:</b>		
INSPECTION OR TEST	TEST METHOD PER MIL-STD-202 EXCEPT AS NOTED	POST TEST REQUIREMENTS
Visual and Mechanical		In accordance with applicable requirements
Materials, Design, Construction and Workmanship		
Physical Dimensions & Marking		
Seal (4601 Style Only)	Method 112, condition A	No leaks
Capacitance	Method 305, 1KHz, 1±0.2 VRMS max. +25°C	Within specified tolerance
Dissipation Factor (1/Q)	Method 306, 1KHz, 1±0.2 VRMS max. +25°C	4.0% max
Dielectric Withstanding Voltage	Method 301, 2 seconds, 50 mA max. surge current, 2 times WVDC.	No evidence of damage or break down.
Insulation Resistance	Method 302, 50 mA max. charging current, 100VDC, 2 minutes or as specified by individual variation	Greater than 10,000 Megohms or 100 Ohm-Farads, whichever is less.
Insertion Loss	MIL-STD-220, 50 Ohms, +25°C, no load	Per application requirements.
DC Resistance (4601 Style Only)	MIL-PRF-15733	0.01 Ohms max.
Solderability (5pcs)	Method 208	Per applicable requirements.

### PERIODIC QUALITY CONFORMANCE INSPECTION:

A periodic quality conformance inspection program consisting of environmental and reliability testing is in place to ensure that product integrity is consistently maintained.
