4-bit 1-of-2 FET multiplexer/demultiplexer with charge pump

Rev. 2 — 11 April 2024

Product data sheet

1. General description

The 74CB3Q3257-Q100 is a quad high-bandwidth single-pole, double-throw FET bus switch. The device features one select input (S) and one output enable input (\overline{OE}). The switch is disabled when the \overline{OE} input is HIGH. An internal charge-pump increases the gate voltage of the NMOS pass transistor. The result is improved R_{ON} and $R_{ON(Flat)}$ performance and the ability to switch 5 V signals when $V_{CC} = 3.3$ V.

This product has been qualified to the Automotive Electronics Council (AEC) standard Q100 (Grade 3) and is suitable for use in automotive applications.
