

**THE DATASHEET OF
WR04X4701FTL**

APPROVAL SHEET

WR10, WR12, WR08, WR06, WR04

$\pm 1\%$, $\pm 5\%$, Jumper

Thick Film General Purpose Chip Resistors

Size 1210, 1206, 0805, 0603, 0402

RoHS 2 Compliant with exemption 7C-I

Halogen free

*Contents in this sheet are subject to change without prior notice.

FEATURE

1. High reliability and stability
2. Reduced size of final equipment
3. Lower assembly costs
4. Higher component and equipment reliability
5. RoHS 2 compliant with exemption 7C-I and Halogen free products
6. Flammability against UL94-V0

APPLICATION

- Consumer electrical equipment
- EDP, Computer application
- Telecom application

DESCRIPTION

The resistors are constructed in a high grade ceramic body (aluminum oxide). Internal metal electrodes are added at each end and connected by a resistive paste that is applied to the top surface of the substrate. The composition of the paste is adjusted to give the approximate resistance required and the value is trimmed to within tolerance by laser cutting of this resistive layer.

The resistive layer is covered with a protective coat. Finally, the two external end terminations are added. For ease of soldering the outer layer of these end terminations is a Tin (lead free) alloy.

Fig 1. Construction of Chip-R

QUICK REFERENCE DATA

| Item | General Specification | | | | |
|--|--|------------|------------|------------|------------|
| Series No. | WR10 | WR12 | WR08 | WR06 | WR04 |
| Size code | 1210(3225) | 1206(3216) | 0805(2012) | 0603(1608) | 0402(1005) |
| Resistance Range | 1Ω~10MΩ (±5% tolerance), 1Ω~10MΩ (±1% tolerance), | | | | |
| Resistance Tolerance | ±1%, E96/E24 ±5%, E24 | | | | |
| TCR (ppm/°C) 10MΩ ≥R > 10Ω R ≤ 10Ω | ≤ ± 100 -200~+400 | | | | |
| Max. dissipation @ T _{amb} =70°C | 1/3 W | 1/4 W | 1/8 W | 1/10 W | 1/16 W |
| Max. Operation Voltage | 200V | 200V | 150V | 75V | 50V |
| Max. Overload Voltage | 400V | 400V | 300V | 150V | 100V |
| Operation temperature | -55 ~ +155°C | | | | |

Note :

1. This is the maximum voltage that may be continuously supplied to the resistor element, see "IEC publication 60115-8"
2. Max. Operation Voltage : So called RCWV (Rated Continuous Working Voltage) is determined by

$$RCWV = \sqrt{\text{Rated Power} \times \text{Resistance Value}} \text{ or Max. RCWV listed above, whichever is lower.}$$

For Jumper (0Ω) :

4 digits marking (±1% : 1210,1206,0805)

Each resistor is marked with a four digits code on the protective coating to designate the nominal resistance value.

Example

| RESISTANCE | Jumper (0Ω) | 10Ω | 12Ω | 100Ω | 6800Ω | 47000Ω |
|---|-------------|------|------|------|-------|--------|
| 3 digits marking (1210, 1206, 0805, 0603 ±5% & Jumper) | 000 | 100 | 120 | 101 | 682 | 473 |
| 4 digits marking | - | 10R0 | 12R0 | 1000 | 6801 | 4702 |

FUNCTIONAL DESCRIPTION

Product characterization

Standard values of nominal resistance are taken from the E24 series for resistors with a tolerance of $\pm 5\%$, and E96 series for resistors with a tolerance of $\pm 1\%$. The values of the E24/E96 series are in accordance with "IEC publication 60063"

Derating

The power that the resistor can dissipate depends on the operating temperature; see Fig.2

Figure 2 Maximum dissipation in percentage of rated power as a function of the ambient temperature

MOUNTING

Due to their rectangular shapes and small tolerances, Surface Mountable Resistors are suitable for handling by automatic placement systems.

Chip placement can be on ceramic substrates and printed-circuit boards (PCBs).

Electrical connection to the circuit is by individual soldering condition.

Storage and Handling Conditions:

1. Products are recommended to be used up within two years since operation date as ensured shelf life. Check solderability in case shelf life extension is needed.
2. To store products with following condition:
 - Temperature :5 to 40°C
 - Humidity :20 to 70% relative humidity
3. Caution:
 - a. Don't store products in a corrosive environment such as sulfide, chloride gas, or acid.
 - It may cause oxidization of electrode, which easily be resulted in poor soldering
 - b. To store products on the shelf and avoid exposure to moisture.
 - c. Don't expose products to excessive shock, vibration, direct sunlight and so on

SOLDERING CONDITION follows J-STD-020D

The robust construction of chip resistors allows them to be completely immersed in a solder bath of 260°C for 10 seconds. Therefore, it is possible to mount Surface Mount Resistors on one side of a PCB and other discrete components on the reverse (mixed PCBs).

Surface Mount Resistors are tested for solderability at 235°C during 2 seconds. The test condition for no leaching is 260°C for 30 seconds.

Typical examples of soldering processes that provide reliable joints without any damage are given in Fig 3.

Fig 3. Recommended IR reflow soldering profile for SMT process with SnAgCu series solder paste

TEST AND REQUIREMENTS

Essentially all tests are carried out according to the schedule of IEC publication 115-8, category **LCT/UCT/56**(rated temperature range : **Lower Category Temperature, Upper Category Temperature**; damp heat, long term, 56 days). The testing also meets the requirements specified by EIA, EIAJ and JIS.

The tests are carried out in accordance with IEC publication 68, "Recommended basic climatic and mechanical robustness testing procedure for electronic components" and under standard atmospheric conditions according to IEC 60068-1, subclause 5.3. Unless otherwise specified, the following value supplied :

Temperature: 15°C to 35°C.

Relative humidity: 45% to 75%.

Air pressure: 86kPa to 106 kPa (860 mbar to 1060 mbar).

All soldering tests are performed with mildly activated flux.
