

TL0374J: 0.03 – 3.0 GHz GaAs Ultra Low Noise Amplifier

1.0 Features

- Small signal gain @ 1800 MHz: 21.5 dB
- NF @ 1800 MHz: 0.35 dB
- OP1dB @ 1800 MHz: 18.5 dBm
- OIP3dB @ 1800 MHz: 35 dBm
- 5 V Typical operating voltage
- Operating frequency: 0.03 to 3.0 GHz

Figure 1.1 Device Image
 (8 Pin 2 × 2 × 0.75 mm DFN Package)

2.0 Applications

- 4G/5G Infrastructure Radios
- Small Cells and Cellular Repeaters
- Phase Array Radar
- SDARS

RoHS/REACH/Halogen Free Compliance

3.0 Description

The TL0374J is a broadband, ultra-low Noise Amplifier (LNA) providing high gain and linearity. With a simple input and output match, this LNA can be tuned for different frequency bands targeting LTE (small cells and infrastructure) and any other applications requiring low noise, high gain, and linearity. For >3 GHz frequency band, TL0375J can be considered.

The TL0374J is packaged in a compact, low-cost Dual Flat No Lead (DFN) 2 x 2 x 0.75 mm, 8 pin plastic package.

 (Top View)

4.0 Ordering Information

Table 4.1 Ordering Information

Base Part Number	Package Type	Form	Qty	Reel Diameter	Reel Width	Orderable Part Number
TL0374J	8 Pin 2×2× 0.75 mm DFN	Tape & Reel	5000	13" (330 mm)	18 mm	TL0374JMTRPBF
	Tuned Evaluation Board, 1800 – 2100 MHz					TL0374J-EVB-A
	Tuned Evaluation Board, 2500 – 2700 MHz					TL0374J-EVB-B
	Tuned Evaluation Board, 30 – 1000 MHz					TL0374J-EVB-C
	Tuned Evaluation Board, 30-2600 MHz [3.3 V 30 mA]					TL0374J-EVB-D1
	Tuned Evaluation Board, 30-2600 MHz [5 V 55 mA]					TL0374J-EVB-D2
	Tuned Evaluation Board, 1000-2000 MHz					TL0374J-EVB-E

5.0 Pin Description

Table 5.1 Pin Definition

Pin Number	Pin Name	Description
3-6, 8	NC	No internal connection, can be connected to ground
1	Venable	Venable along with series resistor, sets the Idq. Venable <0.2 V disables the device
2	RF _{IN}	RF Input. DC blocking cap required
7	RF _{OUT} /V _{dd}	RF Output. V _{dd} supplied through an external choke inductor
Package Base	Paddle/Slug	DC and RF Ground. Also provides thermal relief. Multiple vias are recommended

Note: [1] The backside ground slug of the device must be grounded directly to the ground plane through multiple vias to ensure proper operation. Adequate heat sinking required.

6.0 Absolute Maximum Rating

Table 6.1 Absolute Maximum Rating @T_A=+25°C Unless Otherwise Specified

Parameter	Symbol	Value	Unit
Electrical Ratings			
Supply voltage, Venable	V _{dd}	+6	V
Drain current	I _{DQ}	70	mA
RF input power CW	RF _{IN}	23	dBm
Storage Temperature Range	T _{st}	-55 to +150	°C
Operating Temperature Range	T _{op}	-40 to +105	°C
Maximum Junction Temperature	T _J	170	°C
Thermal Ratings			
Thermal Resistance (junction-to-case) – Bottom side	R _{θJC}	15.0	°C/W
Soldering Temperature	T _{SOLD}	260	°C
ESD Ratings			
Human Body Model (HBM)	Level 1B	500 to <1000	V
Charged Device Model (CDM)	Level C	≥1000	V
Moisture Rating			
Moisture Sensitivity Level	MSL	1	-

Attention:

Maximum ratings are absolute ratings. Exposure to absolute maximum rating conditions for extended periods may affect device reliability. Exceeding one or a combination of the absolute maximum ratings may cause permanent and irreversible damage to the device and/or to surrounding circuit.

7.0 Recommended DC Operating Conditions

Table 7.1 Recommended Operating Conditions

Parameter	Symbol	Minimum	Typical	Maximum	Unit
Drain Voltage	V_{DD}		+5.0		V
Venable Voltage	V_{enable}		+5.0		V
Drain Bias Current	I_{DQ} , Set by external resistor	45	60		mA
Venable Bias Current	I_{bias}		3.0		mA
Operating Temperature Range		-40	+25	+105	°C

8.0 Switching Time

Table 8.1 Switching time.

Parameter	Test Condition	Typical	Unit
Switching Rise Time	10/90% of the RF value	300	nsec
Switching Fall Time	10/90% of the RF value	350	nsec

12.0 Test Procedures

Biasing Sequence

To properly bias the TL0374J-EVB-A, follow these steps:
Connect the supply Ground the Ground test point.

- Apply bias to the Venable=5 V test points.
- Apply bias to the Vdd=5 V test point.
- Apply an RF input signal.

The TL0374J-EVB-A is shipped fully assembled and tested. Figure 12.1 illustrates a basic test setup diagram for evaluating s-parameters, which includes gain, input output return loss and reverse isolation using a network analyzer. Follow these steps to complete the test setup and verify the operation of the TL0374J-EVB-A

1. Connect the Ground test point to the ground terminal of the power supply.
2. Connect the Venable and Vdd test points to the voltage output terminal of a 5 V supply that sources a current of approximately 60 mA.
3. Connect a calibrated network analyzer to the RF-in, and RF-out SMA connectors. Sweep the frequency from 1 GHz to 6 GHz and set the power to -25 dBm.

The TL0374J-EVB-A is expected to have a gain of 21.5 dB at 1.8 GHz. Refer to Table 9.1 for the expected results.

Additional test equipment is required for a comprehensive evaluation of the device's functions and performance.

For noise figure evaluation, use either a noise figure analyzer or a spectrum analyzer with a noise option. It is recommended to use a low excess noise ratio (ENR) noise source.

For third-order intercept point evaluation, use two signal generators and a spectrum analyzer. A high isolation power combiner is recommended.

For power compression and power handling evaluations, use a two-channel power meter and a signal generator. Ensure that the input power amplifier has sufficient power capacity. Test accessories such as couplers and attenuators must also have adequate power handling capabilities.

Please note that measurements conducted at the SMA connectors of the TL0374J-EVB-A include the losses of the SMA connectors and the PCB. The through line should be measured to calibrate the effects of the TL0374J-EVB-A. The through line consists of an RF input line and an RF output line that are connected to the device and have equal lengths.

Attention:

Please refer to application notes [TN-001](#) and [TN-002](#) at <http://www.tagoretech.com> for PCB and soldering related guidelines.

14.0 PCB Land Design

Guidelines:

- [1] 2-layer PCB is recommended.
- [2] Via diameter is recommended to be 0.3 mm to prevent solder wicking inside the vias.
- [3] Thermal vias shall only be placed on the center pad and should be filled/plugged with solder or copper.
- [4] The maximum via number for the center pad is $1(X) \times 2(Y) = 2$

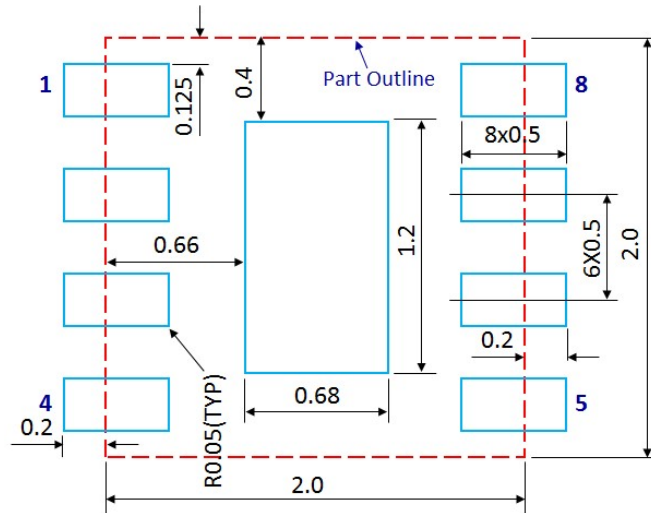

Figure 14.1 PCB Land Pattern
(Dimensions are in mm)

Figure 14.3 Thermal Via Pattern
(Recommended Values: $S \geq 0.15$ mm; $Y \geq 0.20$ mm; $d = 0.3$ mm; Plating Thickness $t = 25$ μ m or 50 μ m)

15.0 PCB Stencil Design

Guidelines:

- [1] Laser-cut, stainless steel stencil is recommended with electro-polished trapezoidal walls to improve the paste release.
- [2] Stencil thickness is recommended to be 125 μm .
