Description

The BGSA144ML10 is a Single-Pole Four Throws (SP4T) Antenna Tuning switch optimized for RF applications up to 7.125 GHz. The BGSA144ML10 is made of 4 low On resistance / low Off capacitance series switches and 4 shunt to ground switches enabling on-demand open-reflective or short-reflective OFF ports behaviour. This last feature is of great value to reduce antenna engineer development time in case of unwanted antenna resonance or to improve antenna efficiency with less component tuning effort.

¹⁾ Switch has a low-pass response. For higher frequencies, losses have to be considered for their impact on thermal heating. The DC voltage at RF ports V_{RFDC} has to be 0V.

²⁾ Note: Consider any ripple voltages on top of V_{IO} . A high RF ripple at the V_{IO} can exceed the maximum ratings by $V_{IO} = V_{DC} + V_{Ripple}$.

³⁾ Field-Induced Charged-Device Model ANSI/ESDA/JEDEC JS-002. Simulates charging/discharging events that occur in production equipment and processes. Potential for CDM ESD events occurs whenever there is metal-to-metal contact in manufacturing.

⁴⁾ Human Body Model ANSI/ESDA/JEDEC JS-001 (R=1.5 k Ω , C=100 pF).

Warning: Stresses above the max. values listed here may cause permanent damage to the device. Maximum ratings are absolute ratings; exceeding only one of these values may cause irreversible damage to the integrated circuit. Exposure to conditions at or below absolute maximum rating but above the specified maximum operation conditions may affect device reliability and life time. Functionality of the device might not be given under these conditions.

Warning: Register_0 and Register_1 RF switch control bits are identical. Writing both Registers Register_0 and Register_1 simultaneously will lead to undefined behavior. The unused register (Register_0 or Register_1) must remain 0x00.

BGSA144ML10 truth table allows to connect any combination of above bits in one single write to register_0 (respectively register_1) command. As an example RF1 series can be set ON while RF1 shunt is set OFF, RF2, RF3 and RF4 series set OFF and shunt set ON by using this single write to register_0 command «0b:11100001».
