

## Single Supply $V_{IN}$ , LOW $V_{IN}$ , LOW $V_{OUT}$ , 1.5A LDO

### Features

- Single Input Voltage Range:  $V_{IN}$  1.65V to 5.5V
- Maximum Dropout ( $V_{IN} - V_{OUT}$ ) of 500 mV over Temperature
- Adjustable Output Voltage Down to 0.5V
- Stable with 10  $\mu$ F Ceramic Output Capacitor
- Excellent Line and Load Regulation Specifications
- Logic-Controlled Shutdown
- Thermal Shutdown and Current-Limit Protection
- 10-Pin 3 mm x 3 mm DFN Package
- ePAD SOIC-8 package
- $-40^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$  Junction Temperature Range

### Applications

- Point-of-Load Applications
- Industrial Power
- Sensitive RF Applications

### General Description

The MIC69153 is the 1.5A output current member of the MIC69xxx family of high current, low voltage regulators, that support currents of 1A, 1.5A, 3A, and 5A. The MIC69153 operates from a single low voltage supply, yet offers high precision and ultra-low dropout of 500 mV under worst case conditions.

The MIC69153 operates from an input voltage of 1.65V to 5.5V. It is designed to drive digital circuits requiring low voltage at high currents (i.e. PLDs, DSP, microcontroller, etc.). These regulators are available only in adjustable output voltage option and can support output voltages down to 0.5V.

The  $\mu$ Cap design of the MIC69153 is optimized for stability with low value low ESR ceramic output capacitors.

Features of the MIC69153 include thermal shutdown and current-limit protection. Logic enable and error flag pins are also available.

The MIC69153 is offered in a tiny 10-pin 3 mm x 3 mm DFN package and an ePAD SOIC-8 package. Both packages have an operating temperature range of  $-40^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$ .

### Typical Application Circuit

## 1.0 ELECTRICAL CHARACTERISTICS

### Absolute Maximum Ratings †

Supply Input Voltage ( $V_{IN}$ )	+6V
Logic Input Voltage ( $V_{EN}$ )	0V to $V_{IN}$
Power Dissipation ( $P_D$ ) (Note 1)	Internally Limited
Flag Pin (FLG)	+6V
ESD Rating (Note 2)	2 kV

### Operating Ratings ‡

Supply Voltage ( $V_{IN}$ )	+1.65V to +5.5V
Enable Input Voltage ( $V_{EN}$ )	0V to $V_{IN}$

† **Notice:** Stresses above those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at those or any other conditions above those indicated in the operational sections of this specification is not intended. Exposure to maximum rating conditions for extended periods may affect device reliability. Specifications are for packaged product only.

‡ **Notice:** The device is not guaranteed to function outside its operating ratings.

**Note 1:** The maximum allowable power dissipation of any  $T_A$  (ambient temperature) is  $P_{D(max)} = (T_{J(max)} - T_A) / \theta_{JA}$ . Exceeding the maximum allowable power dissipation will result in excessive die temperature and the regulator will go into thermal shutdown.

**2:** Devices are ESD sensitive. Handling precautions are recommended. Human body model, 1.5 k $\Omega$  in series with 100 pF

**TABLE 1-1: ELECTRICAL CHARACTERISTICS**

**Electrical Characteristics:**  $T_A = +25^\circ\text{C}$  with  $V_{IN} = V_{OUT} + 1\text{V}$ ; **Bold** values indicate  $-40^\circ\text{C} \leq T_J \leq +125^\circ\text{C}$ ;  $I_{OUT} = 10\text{ mA}$ ;  $C_{OUT} = 4.7\ \mu\text{F}$  ceramic, unless otherwise noted.

Parameter	Symbol	Min.	Typ.	Max.	Units	Conditions
Output Voltage Accuracy	$V_{OUT}$	<b>-2</b>	—	<b>+2</b>	%	Overtemperature range (The precision of the resistive divider is not included)
Adjustable Feedback Voltage	$V_{FB}$	<b>0.49</b>	0.5	<b>0.51</b>	V	—

Output Voltage Line Regulation (Note 1)	$\Delta V_{OUT}/\Delta V_{IN}$	—	$\pm 0.2$	$\pm 0.3$	%/V	$V_{IN} = V_{OUT} + 1.0\text{V}$ to 5.5V For $V_{OUT} \geq 0.65\text{V}$ , $V_{IN} = 1.65\text{V}$ to 5.5V
Output Voltage Load Regulation	$\Delta V_{OUT}/V_{OUT}$	—	$\pm 0.2$	—	%	$I_L = 10\text{ mA}$ to 1.5A
$V_{IN} - V_{OUT}$ ; Dropout Voltage (Note 2)	$V_{DO}$	—	185	<b>300</b>	mV	$I_L = 1.0\text{A}$
			250	<b>500</b>	mV	$I_L = 1.5\text{A}$
Ground Pin Current	$I_{GND}$	—	1.6	—	mA	$I_L = 10\text{ mA}$
			7.5	<b>20</b>	mA	$I_L = 0.5\text{A}$
			20	<b>35</b>	mA	$I_L = 1.5\text{A}$
Ground Pin Current in Shutdown	$I_{SHDN}$	—	1	—	$\mu\text{A}$	$V_{EN} = 0\text{V}$
Current Limit	$I_{LIM}$	<b>1.7</b>	2.6	—	A	$V_{OUT} = 0\text{V}$
Start-Up Time	$t_{START}$	—	10	<b>150</b>	$\mu\text{s}$	$V_{EN} = V_{IN}$
Thermal Shutdown	$T_{SHDN}$	—	165	—	$^\circ\text{C}$	—
<b>Enable Input</b>						
Enable Input Threshold	$V_{EN}$	<b>0.8</b>	0.6	—	V	Regulator enable
		—	—	<b>0.2</b>	V	Regulator shutdown

# MIC69153

**TABLE 1-1: ELECTRICAL CHARACTERISTICS (CONTINUED)**

**Electrical Characteristics:**  $T_A = +25^\circ\text{C}$  with  $V_{IN} = V_{OUT} + 1\text{V}$ ; **Bold** values indicate  $-40^\circ\text{C} \leq T_J \leq +125^\circ\text{C}$ ;  $I_{OUT} = 10\text{ mA}$ ;  $C_{OUT} = 4.7\ \mu\text{F}$  ceramic, unless otherwise noted.

Parameter	Symbol	Min.	Typ.	Max.	Units	Conditions
Enable Pin Input Current	$I_{EN}$	—	0.005	—	$\mu\text{A}$	$V_{IL} \leq 0.2\text{V}$ (Regulator shutdown)
		—	7	—	$\mu\text{A}$	$V_{IH} \geq 0.8\text{V}$ (Regulator enable)
<b>Flag Output</b>						
Flag Output Leakage Current	$I_{FLG(LEAK)}$	—	0.05	—	$\mu\text{A}$	Flag off
Output Logic-Low Voltage (Undervoltage Condition)	$V_{FLG(LO)}$	—	150	—	mV	$I_L = 5\text{ mA}$
Flag Threshold	$V_{FLG}$	7.5	10	14	%	% of $V_{OUT}$ below nominal (falling)
Hysteresis	—	—	2	—	%	—

- 1: Minimum input for line regulation test is set to  $V_{OUT} + 1\text{V}$  relative to the highest output voltage.
- 2: Dropout voltage is defined as the input-to-output differential at which the output voltage drops 2% below its nominal value measured at 1V differential. For outputs below 1.65V, dropout voltage is considered the input-to-output voltage differential with the minimum input voltage of 1.65V. Minimum input operating voltage is 1.65V.

## TEMPERATURE SPECIFICATIONS (Note 1)

Parameters	Sym.	Min.	Typ.	Max.	Units	Conditions
<b>Temperature Ranges</b>						
Storage Temperature Range	$T_S$	-65	—	+125	°C	—
Junction Temperature Range	$T_J$	-40	—	+125	°C	—
<b>Package Thermal Resistances</b>						
Thermal Resistance DFN-10	$\theta_{JA}$	—	60	—	°C/W	—
Thermal Resistance ePAD SOIC-8	$\theta_{JA}$	—	41	—	°C/W	—

**Note 1:** The maximum allowable power dissipation is a function of ambient temperature, the maximum allowable junction temperature and the thermal resistance from junction to air (i.e.,  $T_A$ ,  $T_J$ ,  $\theta_{JA}$ ). Exceeding the maximum allowable power dissipation will cause the device operating junction temperature to exceed the maximum +125°C rating. Sustained junction temperatures above +125°C can impact the device reliability.

## 3.0 PIN DESCRIPTIONS

The descriptions of the pins are listed in [Table 3-1](#).

**TABLE 3-1: PIN FUNCTION TABLE**

Pin Number DFN-10	Pin Number ePAD SOIC-8	Pin Name	Description
1	8	FLG	Error Flag (Output): Open collector output. Active-low indicates an output fault condition.
2, 4, 5, 8	—	NC	Not internally connected.
3 (EP)	1	GND	Ground (exposed pad is recommended to connect to ground on DFN).
6	2	EN	Enable (Input): CMOS compatible input. Logic-high = enable, logic-low = shutdown. Do not leave pin floating.
7	3, 4	VIN	Input voltage that supplies current to the output power device.
9	5, 6	VOUT	Regulator Output.
10	7	ADJ	Adjustable regulator feedback input. Connect to resistor voltage divider.

# MIC69153

## 4.0 APPLICATION INFORMATION

The MIC69153 is an ultra-high performance low dropout linear regulator designed for high current applications that require a fast transient response. It utilizes a single input supply, perfect for low voltage DC-to-DC conversion. The MIC69153 requires a minimum number of external components. The MIC69153 regulator is fully protected from damage due to fault conditions offering constant current limiting and thermal shutdown.

### 4.1 Input Supply Voltage

$V_{IN}$  provides a high current to the collector of the pass transistor. The minimum input voltage is 1.65V allowing conversion from low voltage supplies.

### 4.2 Input Capacitor

An input capacitor of 1  $\mu$ F or greater is recommended when the device is more than 4 inches away from the bulk AC supply capacitance or when the supply is a battery. Small, surface mount, ceramic chip capacitors can be used for bypassing. The capacitor should be placed within 1 inch of the device for optimal performance. Larger values will help to improve ripple rejection by bypassing the input to the regulator, further improving the integrity of the output voltage.

### 4.3 Output Capacitor

The MIC69153 requires a minimum of output capacitance to maintain stability. However, proper capacitor selection is important to ensure desired transient response. The MIC69153 is specifically designed to be stable with low ESR ceramic chip capacitors. A 4.7  $\mu$ F ceramic chip capacitor should satisfy most applications. Output capacitor can be increased without bound. See **Section 2.0 “Typical Performance Curves”** for examples of load transient response.

X7R dielectric ceramic capacitors are recommended because of their temperature performance. X7R-type capacitors change capacitance by only 15% over their operating temperature range and are the most stable type of ceramic capacitors. Z5U and Y5V dielectric capacitors change value by as much as 50% and 60%, respectively over their operating temperature ranges. To use a ceramic chip capacitor with Y5V dielectric the value must be much higher than an X7R ceramic or a tantalum capacitor to ensure the same capacitance value over the operating temperature range. Tantalum capacitors have a very stable dielectric (10% over their operating temperature range) and can also be used with this device.

### 4.4 Minimum Load Current

The MIC69153 regulator is specified between finite loads. If the output current is too small, leakage currents dominate and the output voltage rises. A minimum 10 mA load current is necessary for proper operation.

### 4.5 Adjustable Regulator Design

The MIC69153 adjustable version allows programming the output voltage anywhere between 0.5V and 5.5V with two resistors. The resistor value between  $V_{OUT}$  and the adjust pin should not exceed 10 k $\Omega$ . Larger values can cause instability. The resistor values are calculated by:

#### EQUATION 4-1:

$$V_{OUT} = 0.5 \left( \frac{R1}{R2} + 1 \right)$$

Where:

$V_{OUT}$  is the desired output voltage

### 4.6 Enable

The MIC69153 features an active high enable input (EN) that allows on-off control of the regulator. Current drain reduces to near “zero” when the device is shutdown, with only microamperes of leakage current. EN may be directly tied to  $V_{IN}$  and pulled up to the maximum supply voltage.

### 4.7 Thermal Design

Linear regulators are simple to use. The most complicated design parameters to consider are thermal characteristics. Thermal design requires the following application-specific parameters:

- Maximum ambient temperature ( $T_A$ )
- Output current ( $I_{OUT}$ )
- Output voltage ( $V_{OUT}$ )
- Input voltage ( $V_{IN}$ )
- Ground current ( $I_{GND}$ )

First, calculate the power dissipation of the regulator from these numbers and the device parameters from this data sheet.

## EQUATION 4-2:

$$P_D = (V_{IN} - V_{OUT})I_{OUT} + V_{IN} \times I_{GND}$$

In [Equation 4-2](#), the ground current is approximated by using numbers from the **Section 1.0 “Electrical Characteristics”** or **Section 2.0 “Typical Performance Curves”** sections. The maximum allowable power dissipation of any  $T_A$  (ambient temperature) is  $P_{D(MAX)} = (T_{J(MAX)} - T_A) / \theta_{JA}$ . Exceeding the maximum allowable power dissipation will result in excessive die temperature and the regulator will go into thermal shutdown.

Refer to [Application Note 9](#) for further details and examples on thermal design and heat sink applications.

## 5.0 PACKAGING INFORMATION

### 5.1 Package Marking Information

8-Lead ePAD SOIC\*

Example

10-Lead DFN\*

Example

<b>Legend:</b>	XX...X	Product code or customer-specific information
	Y	Year code (last digit of calendar year)
	YY	Year code (last 2 digits of calendar year)
	WW	Week code (week of January 1 is week '01')
	NNN	Alphanumeric traceability code
	(e3)	Pb-free JEDEC® designator for Matte Tin (Sn)
	*	This package is Pb-free. The Pb-free JEDEC designator (e3) can be found on the outer packaging for this package.
	●, ▲, ▼	Pin one index is identified by a dot, delta up, or delta down (triangle mark).
<b>Note:</b>	In the event the full Microchip part number cannot be marked on one line, it will be carried over to the next line, thus limiting the number of available characters for customer-specific information. Package may or may not include the corporate logo.	
	Underbar (¯) and/or Overbar (˘) symbol may not be to scale.

NOTES:

---

**Note the following details of the code protection feature on Microchip devices:**

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as “unbreakable.”

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.
