Basic Characteristics

■ Basic Characteristics

1. Zero-power Resistance of Thermistor: R

$$R = R_0 \exp B (1/T - 1/T_0) \dots\dots\dots(1)$$

R: Resistance in ambient temperature T (K)
(K: absolute temperature)

R₀: Resistance in ambient temperature T₀ (K)

B: B-Constant of Thermistor

2. B-Constant

as (1) formula

$$B = \frac{\ln(R/R_0)}{1/T - 1/T_0} \dots\dots\dots(2)$$

3. Thermal Dissipation Constant

When electric power P (mW) is spent in ambient temperature T₁ and thermistor temperature rises T₂, there is a formula as follows

$$P = C (T_2 - T_1) \dots\dots\dots(3)$$

C: Thermal dissipation constant (mW/°C)

Thermal dissipation constant is varied with dimensions, measurement conditions, etc.

4. Thermal Time Constant

Period in which Thermistor's temperature will change 63.2% of its temperature difference from ambient temperature T₀ (°C) to T₁ (°C).

■ Performance

Item	Condition
Resistance	Measured by zero-power in specified ambient temperature.
B-Constant	Calculated between two specified ambient temperatures by next formula. T and T ₀ is absolute temperature (K). $B = \frac{\ln(R/R_0)}{1/T - 1/T_0}$
Thermal Dissipation Constant	Shows necessary electric power that Thermistor's temperature rises 1°C by self heating. It is calculated by next formula. (mW/°C) $C = \frac{P}{T - T_0}$
Rated Electric Power	Shows necessary electric power that Thermistor's temperature rises to a specified temperature by self heating in ambient temperature 25°C.
Permissive Operating Current	It is possible to keep Thermistor's temperature rising max. 1°C.

Please inquire about test conditions and ratings.

for Temperature Sensor Thermo String Type/Lead Type ⚠Caution/Notice

■ Notice (Soldering and Mounting) NXF Series

Please notice as shown below when you mount this product.

1. Do not melt the solder in resin head, when you solder this product. If you melt the solder in resin head, it has possibility that the break of wire, short and break of lead insulation. In case you cut the lead wire of this product less than 20mm from resin head, the heat of melted solder at lead wire edge is propagated easily to the resin head along the lead wire.
2. Do not touch the resin head directly by solder iron. It may cause the melt of solder in resin head.
3. Do not separate the parallel lead wires 10mm or less from the resin head, when you separate parallel lead wires.
4. If you mold by resin this product, please evaluate the quality of this product before you use it.
5. Do not bend the lead wire radius 1mm or less when you bend the lead wire.

■ Notice (Handling)

1. The ceramic element of this product is fragile, and care must be taken not to load an excessive press-force or not to give a shock at handling. Such forces may cause cracking or chipping.
2. Do not apply an excessive force to the lead. Otherwise, it may cause junction between lead and element to break or crack. Holding element by side lead wire is recommended when lead wire is bent or cut.

The soldering point should be min. 5mm away from the root of lead wire.

for Inrush Current Suppression Lead Type ⚠Caution/Notice

■ Notice (Handling)

1. When this product is operated, temperature of some area may be about 160 (degree C).
Use proper surrounding parts and material which withstand such temperature. If they are inadequate and kept at high temperature for long time, they may be deteriorated or may produce harmful gas. And, such harmful gas may deteriorate the element of this product.
2. This product does not have waterproof construction. Splashed water may cause failure mode such as deterioration of characteristics or current leak. So, do not apply cleaning to immerse it into water or any solvent.
3. The ceramic element of this product is fragile, and care must be taken not to load an excessive press-force or not to give a shock at handling. Such forces may cause cracking or chipping to the element.
4. Do not apply an excessive force to the lead wire. Otherwise, it may cause break off junction between lead wire and element, or may crack element. So, fix lead wire of element side when lead wire is bent or cut.

■ Notice (Others)

1. This product may allow passing higher current than its initial value when it receives inrush current again just after the last one until it cools down and recovers its original resistance enough. Be sure the highest current under actual condition on the operating repetition and the operating temperature.
2. The resin coating of this product does not guarantee insulating. Keep an adequate insulating distance to surrounding parts.
