

**THE DATASHEET OF
NCP3335ADMADJR2G**

NCP3335A

Ultra High Accuracy, Low Iq, 500 mA Low Dropout Regulator

The NCP3335A is a high performance, low dropout regulator with accuracy of $\pm 0.9\%$ over line and load. This device features ultra-low quiescent current and noise which encompasses all necessary characteristics demanded by today's consumer electronics. This unique device is guaranteed to be stable without a minimum load current requirement and stable with any type of capacitor as small as 1.0 μF . The NCP3335A also comes equipped with sense and noise reduction pins to increase the overall utility of the device and offers reverse bias protection.

Features

- High Accuracy Over Line and Load ($\pm 0.9\%$ at 25°C)
- Ultra-Low Dropout Voltage at Full Load (260 mV typ.)
- No Minimum Output Current Required for Stability
- Low Noise (31 μVrms w/10 nF C_{nr} and 51 μVrms w/out C_{nr})
- Low Shutdown Current (0.07 μA)
- Reverse Bias Protected
- 2.6 V to 12 V Supply Range
- Thermal Shutdown Protection
- Current Limitation
- Requires Only 1.0 μF Output Capacitance for Stability
- Stable with Any Type of Capacitor (including MLCC)
- Available in 1.5 V, 1.8 V, 2.5 V, 2.8 V, 2.85 V, 3.0 V, 3.3 V, 5.0 V and Adjustable Output Voltages
- These are Pb-Free Devices

Applications

- PCMCIA Card
- Cellular Phones
- Camcoders and Cameras
- Networking Systems, DSL/Cable Modems
- Cable Set-Top Box
- MP3/CD Players
- DSP Supply
- Displays and Monitors

PIN FUNCTION DESCRIPTION

Fixed Version

| Micro8 Pin No. | DFN10 Pin No. | Pin Name | Description |
|----------------|---------------|------------------|---|
| 1, 2 | 1, 2 | V _{out} | Regulated output voltage. Bypass to ground with C _{out} ≥ 1.0 μF. |
| 3 | 3 | SENSE | For output voltage sensing, connect to Pins 1 and 2. |
| 4 | 4 | GND | Power Supply Ground |
| 5 | 7 | NR | Noise Reduction Pin. This is an optional pin used to further reduce noise. |
| 6 | 8 | \overline{SD} | Shutdown pin. When not in use, this pin should be connected to the input pin. |
| 7, 8 | 9, 10 | V _{in} | Power Supply Input Voltage |
| - | 5, 6 | NC | Not Connected |
| - | EPAD | EPAD | Exposed thermal pad should be connected to ground. |

Adjustable Version

| | | | |
|------|-------|------------------|---|
| 1, 2 | 1, 2 | V _{out} | Regulated output voltage. Bypass to ground with C _{out} ≥ 1.0 μF. |
| 3 | 3 | Adj | Adjustable pin; reference voltage = 1.25 V. |
| 4 | 4 | GND | Power Supply Ground |
| 5 | 7 | NR | Noise Reduction Pin. This is an optional pin used to further reduce noise. |
| 6 | 8 | \overline{SD} | Shutdown pin. When not in use, this pin should be connected to the input pin. |
| 7, 8 | 9, 10 | V _{in} | Power Supply Input Voltage |
| - | 5, 6 | NC | Not Connected |
| - | EPAD | EPAD | Exposed thermal pad should be connected to ground. |

MAXIMUM RATINGS

| Rating | Symbol | Value | Unit |
|----------------------------|------------------|---------------------------------------|------|
| Input Voltage | V _{in} | -0.3 to +16 | V |
| Output Voltage | V _{out} | -0.3 to V _{in} +0.3 or 10 V* | V |
| Shutdown Pin Voltage | V _{sh} | -0.3 to +16 | V |
| Junction Temperature Range | T _J | -40 to +150 | °C |
| Storage Temperature Range | T _{stg} | -50 to +150 | °C |

Stresses exceeding Maximum Ratings may damage the device. Maximum Ratings are stress ratings only. Functional operation above the Recommended Operating Conditions is not implied. Extended exposure to stresses above the Recommended Operating Conditions may affect device reliability.

NOTE: This device series contains ESD protection and exceeds the following tests:

Human Body Model (HBM) JESD 22-A114-B

Machine Model (MM) JESD 22-A115-A

*Which ever is less. Reverse bias protection feature valid only if V_{out} - V_{in} ≤ 7 V.

THERMAL CHARACTERISTICS

| Characteristic | Test Conditions (Typical Value) | | Unit |
|-----------------------------------|---------------------------------|-----------------------|------|
| | Min Pad Board (Note 1) | 1" Pad Board (Note 1) | |
| Micro 8 | | | |
| Junction-to-Air, θ _{JA} | 264 | 174 | °C/W |
| Junction-to-Pin, ψ _{JL2} | 110 | 100 | °C/W |
| 10 Lead DFN EPad | | | |
| Junction-to-Air, θ _{JA} | 215 | 66 | °C/W |
| Junction-to-Pin, ψ _{JL2} | 55 | 17 | °C/W |

1. As mounted on a 35 x 35 x 1.5 mm FR4 Substrate, with a single layer of a specified copper area of 2 oz (0.07 mm thick) copper traces and heat spreading area. JEDEC 51 specifications for a low and high conductivity test board recommend a 2 oz copper thickness. Test conditions are under natural convection or zero air flow.

NCP3335A

ELECTRICAL CHARACTERISTICS – 5.0 V ($V_{out} = 5.0$ V typical, $V_{in} = 5.4$ V, $T_A = -40^\circ\text{C}$ to $+85^\circ\text{C}$, unless otherwise noted, Note 2.)

| Characteristic | Symbol | Min | Typ | Max | Unit |

APPLICATIONS INFORMATION

Reverse Bias Protection

Reverse bias is a condition caused when the input voltage goes to zero, but the output voltage is kept high either by a large output capacitor or another source in the application which feeds the output pin.

Normally in a bipolar LDO all the current will flow from the output pin to input pin through the PN junction with limited current capability and with the potential to destroy the IC.

Due to an improved architecture, the NCP3335A can withstand up to 7.0 V on the output pin with virtually no current flowing from output pin to input pin, and only negligible amount of current (tens of μA) flowing from the output pin to ground for infinite duration.

Input Capacitor

An input capacitor of at least 1.0 μF , any type, is recommended to improve the transient response of the regulator and/or if the regulator is located more than a few inches from the power source. It will also reduce the circuit's sensitivity to the input line impedance at high frequencies. The capacitor should be mounted with the shortest possible track length directly across the regulator's input terminals.

Output Capacitor

The NCP3335A remains stable with any type of capacitor as long as it fulfills its 1.0 μF requirement. There are no constraints on the minimum ESR and it will remain stable up to an ESR of 5.0 Ω . Larger capacitor values will improve the noise rejection and load transient response.

Noise Reduction Pin

Output noise can be greatly reduced by connecting a 10 nF capacitor (C_{nr}) between the noise reduction pin and ground (see Figure 1). In applications where very low noise is not required, the noise reduction pin can be left unconnected.

For the adjustable version, in addition to the 10 nF C_{nr} , a 68 pF capacitor connected in parallel with R1 (see Figure 2)

is recommended to further reduce output noise and improve stability.

Adjustable Operation

The output voltage can be set by using a resistor divider as shown in Figure 2 with a range of 1.25 to 10 V. The appropriate resistor divider can be found by solving the equation below. The recommended current through the resistor divider is from 10 μA to 100 μA . This can be accomplished by selecting resistors in the $\text{k}\Omega$ range. As result, the $I_{adj} * R2$ becomes negligible in the equation and can be ignored.

$$V_{out} = 1.25 * \left(1 + \frac{R1}{R2}\right) + I_{adj} * R2 \quad (\text{eq. 1})$$

Example:

For $V_{out} = 2.9 \text{ V}$, can use $R1 = 36 \text{ k}\Omega$ and $R2 = 27 \text{ k}\Omega$.

$$1.25 * \left(1 + \frac{36 \text{ k}\Omega}{27 \text{ k}\Omega}\right) = 2.91 \text{ V} \quad (\text{eq. 2})$$

Dropout Voltage

The voltage dropout is measured at 97% of the nominal output voltage.

Thermal Considerations

Internal thermal limiting circuitry is provided to protect the integrated circuit in the event that the maximum junction temperature is exceeded. This feature provides protection from a catastrophic device failure due to accidental overheating. This protection feature is not intended to be used as a substitute to heat sinking. The maximum power that can be dissipated, can be calculated with the equation below:

$$P_D = \frac{T_{J(max)} - T_A}{R_{\theta JA}} \quad (\text{eq. 3})$$

For improved thermal performance, contact the factory for the DFN package option. The DFN package includes an exposed metal pad that is specifically designed to reduce the junction to air thermal resistance, $R_{\theta JA}$.

| NCP3335AMNADJR2G | Adj. | ADJ | DFN10 (Pb-Free) | 3000 / Tape & Reel |

†For information on tape and reel specifications, including part orientation and tape sizes, please refer to our Tape and Reel Packaging Specifications Brochure, BRD8011/D.

*Please contact factory for other voltage options.

NCP3335A

PACKAGE DIMENSIONS

Micro8
CASE 846A-02
ISSUE H

| | | | | | | | |
|----------|--------------|---|---|---|---|---|---|
| \oplus | 0.08 (0.003) | M | T | B | S | A | S |
|----------|--------------|---|---|---|---|---|---|

NOTES:

1. DIMENSIONING AND TOLERANCING PER ANSI Y14.5M, 1982.
2. CONTROLLING DIMENSION: MILLIMETER.
3. DIMENSION A DOES NOT INCLUDE MOLD FLASH, PROTRUSIONS OR GATE BURRS. MOLD FLASH, PROTRUSIONS OR GATE BURRS SHALL NOT EXCEED 0.15 (0.006) PER SIDE.
4. DIMENSION B DOES NOT INCLUDE INTERLEAD FLASH OR PROTRUSION. INTERLEAD FLASH OR PROTRUSION SHALL NOT EXCEED 0.25 (0.010) PER SIDE.
5. 846A-01 OBSOLETE, NEW STANDARD 846A-02.

NCP3335A

PACKAGE DIMENSIONS

DFN10, 3x3, 0.5P
CASE 485C
ISSUE C

NOTES:

1. DIMENSIONING AND TOLERANCING PER ASME Y14.5M, 1994.
2. CONTROLLING DIMENSION: MILLIMETERS.
3. DIMENSION b APPLIES TO PLATED TERMINAL AND IS MEASURED BETWEEN 0.25 AND 0.30 MM FROM TERMINAL.
4. COPLANARITY APPLIES TO THE EXPOSED PAD AS WELL AS THE TERMINALS.
5. TERMINAL b MAY HAVE MOLD COMPOUND MATERIAL ALONG SIDE EDGE. MOLD FLASHING MAY NOT EXCEED 30 MICRONS ONTO BOTTOM SURFACE OF TERMINAL b.
6. DETAILS A AND B SHOW OPTIONAL VIEWS FOR END OF TERMINAL LEAD AT EDGE OF PACKAGE.
7. FOR DEVICE OPN CONTAINING W OPTION, DETAIL B ALTERNATE CONSTRUCTION IS NOT APPLICABLE.

*For additional information on our Pb-Free strategy and soldering details, please download the ON Semiconductor Soldering and Mounting Techniques Reference Manual, SOLDERRM/D.
