XC6202P332FRN**

High Voltage Positive Voltage Regulators

■ GENERAL DESCRIPTION

The XC6202 series are highly precise, low power consumption, high voltage input, positive voltage regulators manufactured using CMOS and laser trimming technologies. The XC6202 consists of a current limiter circuit, a driver transistor, a precision reference voltage and an error correction circuit.

Output voltage is selectable in 0.1V steps from 1.8V ~ 18V. The series are also compatible with low ESR ceramic capacitors which give added output stability.

Since the current limiter circuit is built-in, the IC is protected against overshoot currents at such times of output shorts etc. SOT-23, SOT-89, SOT-223 and USP-6B packages are available.

■ APPLICATIONS

- Multi-function power supplies
- Note PCs / Tablet PCs
