

**THE DATASHEET OF  
MC78L15ABPRPG**

## MC78L00A Series, NCV78L00A

Figure 2. Standard Application

A common ground is required between the input and the output voltages. The input voltage must remain typically 2.0 V above the output voltage even during the low point on the input ripple voltage.

\*  $C_{in}$  is required if regulator is located an appreciable distance from power supply filter.

\*\*  $C_O$  is not needed for stability; however, it does improve transient response.

### ABSOLUTE MAXIMUM RATINGS

| Rating   | Symbol      | Value          | Unit |
|--|-------------|----------------|------|
| Input Voltage (5.0 V–9.0 V)<br>(12 V–18 V)<br>(24 V) | $V_I$       | 30<br>35<br>40 | Vdc  |
| Storage Temperature Range                            | $T_{stg}$   | –65 to +150    | °C   |
| Maximum Junction Temperature                         | $T_J$       | 150            | °C   |
| Moisture Sensitivity Level                           | MSL         | 1              | –    |
| ESD Capability, Human Body Model (Note 1)            | $ESD_{HBM}$ | 2000           | V    |
| ESD Capability, Machine Model (Note 1)               | $ESD_{MM}$  | 200            | V    |
| ESD Capability, Charged Device Model (Note 1)        | $ESD_{CDM}$ | 2000           | V    |

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

1. This device series incorporates ESD protection and is tested by the following methods:

ESD Human Body Model tested per AEC–Q100–002 (EIA/JESD22–A114)

ESD Machine Model tested per AEC–Q100–003 (EIA/JESD22–A115)

ESD Charged Device Model tested per EIA/JES D22/C101, Field Induced Charge Model.

### THERMAL CHARACTERISTICS

| Rating   | Symbol          | Value              | Unit |
|--|-----------------|--------------------|------|
| Package Dissipation  | PD              | Internally Limited | W    |
| Thermal Characteristics, TO–92<br>Thermal Resistance, Junction–to–Ambient  | $R_{\theta JA}$ | 200                | °C/W |
| Thermal Characteristics, SOIC8<br>Thermal Resistance, Junction–to–Ambient  | $R_{\theta JA}$ | Refer to Figure 8  | °C/W |
| Thermal Characteristics, SOT–89<br>Thermal Resistance, Junction–to–Ambient | $R_{\theta JA}$ | 55                 | °C/W |

2. Thermal Resistance, Junction–to–Ambient depends on P.C.B. Copper area. See details in Figure 8.

**Thermal Resistance, Junction–to–Case** is not defined. SOIC 8 lead and TO-92 packages that do not have a heat sink like other packages may have. This is the reason that a  $\theta_{JC}$  is never specified. A little heat transfer will occur through the package but since it is plastic, it is minimal. The majority of the heat that is transferred is through the leads where they connect to the circuit board.

## MC78L00A Series, NCV78L00A

**ELECTRICAL CHARACTERISTICS** ( $V_I = 10\text{ V}$ ,  $I_O = 40\text{ mA}$ ,  $C_I = 0.33\text{ }\mu\text{F}$ ,  $C_O = 0.1\text{ }\mu\text{F}$ ,  $-40^\circ\text{C} < T_J < +125^\circ\text{C}$  (for MC78LXXAB, NCV78L05A),  $0^\circ\text{C} < T_J < +125^\circ\text{C}$  (for MC78LXXAC), unless otherwise noted.)

## APPLICATIONS INFORMATION

### Design Considerations

The MC78L00A Series of fixed voltage regulators are designed with Thermal Overload Protection that shuts down the circuit when subjected to an excessive power overload condition. Internal Short Circuit Protection limits the maximum current the circuit will pass.

In many low current applications, compensation capacitors are not required. However, it is recommended that the regulator input be bypassed with a capacitor if the regulator is connected to the power supply filter with long wire lengths, or if the output load capacitance is large. The

input bypass capacitor should be selected to provide good high-frequency characteristics to insure stable operation under all load conditions. A 0.33 μF or larger tantalum, mylar, or other capacitor having low internal impedance at high frequencies should be chosen. The bypass capacitor should be mounted with the shortest possible leads directly across the regulators input terminals. Good construction techniques should be used to minimize ground loops and lead resistance drops since the regulator has no external sense lead. Bypassing the output is also recommended.

The MC78L00 regulators can also be used as a current source when connected as above. In order to minimize dissipation the MC78L05C is chosen in this application. Resistor R determines the current as follows:

$$I_O = \frac{5.0 \text{ V}}{R} + I_B$$

$$I_B = 3.8 \text{ mA over line and load changes}$$

For example, a 100 mA current source would require R to be a 50 Ω, 1/2 W resistor and the output voltage compliance would be the input voltage less 7 V.

## MARKING DIAGRAMS

### SOIC-8 D SUFFIX CASE 751

xx = 05, 08, 09, 12, or 15  
 A = Assembly Location  
 L = Wafer Lot  
 Y = Year  
 W = Work Week  
 B, C = Temperature Range  
 ■ = Pb-Free Package

### SOT-89 CASE 528AG

Y = Year  
 W = Work Week  
 XX = Specific Device Code

### TO-92 P SUFFIX CASE 029

zz = 05, 08, 09, 12, 15, 18 or 24  
 A = Assembly Location  
 L = Wafer Lot  
 Y = Year  
 W = Work Week  
 ■ = Pb-Free Package  
 (Note: Microdot may be in either location)

# MC78L00A Series, NCV78L00A

CASE 751-07  
ISSUE AK

**NOTES:**

1. DIMENSIONING AND TOLERANCING PER ANSI Y14.5M, 1982.
2. CONTROLLING DIMENSION: MILLIMETER.
3. DIMENSION A AND B DO NOT INCLUDE MOLD PROTRUSION.
4. MAXIMUM MOLD PROTRUSION 0.15 (0.006) PER SIDE.
5. DIMENSION D DOES NOT INCLUDE DAMBAR PROTRUSION. ALLOWABLE DAMBAR PROTRUSION SHALL BE 0.127 (0.005) TOTAL IN EXCESS OF THE D DIMENSION AT MAXIMUM MATERIAL CONDITION.
6. 751-01 THRU 751-06 ARE OBSOLETE. NEW STANDARD IS 751-07.
