

**THE DATASHEET OF
74AHC1G09W5-7**

Description

The 74AHC1G09 is a single 2-input positive AND gate with an open drain output. The device is designed for operation with a power supply range of 2.0V to 5.5V. The open-drain output can be connected to other open drain outputs to implement active-low wired-OR or active-high wired-AND functions. The gate performs the positive Boolean function:

$$Y = A \cdot B \text{ or } Y = \overline{\overline{A} + \overline{B}}$$

A pull-up resistor is required to achieve a high output state.

Features

- Supply Voltage Range from 2.0V to 5.5V
