

THE DATASHEET OF MCT5200SD

MCT5200

MCT5201

MCT5210

MCT5211

Description

The MCT52XX series consists of a high-efficiency AlGaAs, infrared emitting diode, coupled with an NPN phototransistor in a six pin dual-in-line package.

The MCT52XX is well suited for CMOS to LSTT/TTL interfaces, offering 250% $CTR_{CE(SAT)}$ with 1 mA of LED input current. When an LED input current of 1.6 mA is supplied data rates to 20K bits/s are possible.

The MCT52XX can easily interface LSTTL to LSTTL/TTL, and with use of an external base to emitter resistor data rates of 100K bits/s can be achieved.

Features

- High $CTR_{CE(SAT)}$ comparable to Darlington
- CTR guaranteed 0°C to 70°C
- High common mode transient rejection 5kV/μs
- Data rates up to 150 kbits/s (NRZ)
- Underwriters Laboratory (UL) recognized (file #E90700)
- VDE recognized (file #94766)
 - Add option 300 (e.g., MCT5211.300)

Applications

- CMOS to CMOS/LSTTL logic isolation
- LSTTL to CMOS/LSTTL logic isolation
- RS-232 line receiver
- Telephone ring detector
- AC line voltage sensing
- Switching power supply

Parameters	Symbol	Device	Value	Units
TOTAL DEVICE				
Storage Temperature	T_{STG}	All	-55 to +150	°C
Operating Temperature	T_{OPR}	All	-55 to +100	°C
Lead Solder Temperature	T_{SOL}	All	260 for 10 sec	°C
Total Device Power Dissipation @ 25°C (LED plus detector)	P_D	All	260	mW
Derate Linearly From 25°C			3.5	mW/°C
EMITTER				
Continuous Forward Current	I_F	All	50	mA
Reverse Input Voltage	V_R	All	6	V
Forward Current - Peak (1 μs pulse, 300 pps)	$I_F(pk)$	All	3.0	A
LED Power Dissipation	P_D	All	75	mW
Derate Linearly From 25°C		All	1.0	mW/°C
DETECTOR				
Continuous Collector Current	I_C	All	150	mA
Detector Power Dissipation	P_D	All	150	mW
Derate Linearly from 25°C		All	2.0	mW/°C

**All typicals at T_A = 25°C

Notes

- DC Current Transfer Ratio (CTR_{CE}) is defined as the transistor collector current (I_{CE}) divided by the input LED current (I_F) x 100%, at a specified voltage between the collector and emitter (V_{CE}).
- The collector base Current Transfer Ratio (CTR_{CB}) is defined as the transistor collector base photocurrent(I_{CB}) divided by the input LED current (I_F) time 100%.
- Referring to Figure 14 the T_{PHL} propagation delay is measured from the 50% point of the rising edge of the data input pulse to the 1.3V point on the falling edge of the output pulse.
- Referring to Figure 14 the T_{PLH} propagation delay is measured from the 50% point of the falling edge of data input pulse to the 1.3V point on the rising edge of the output pulse.
- Delay time (t_d) is measured from 50% of rising edge of LED current to 90% of V_o falling edge.
- Rise time (t_r) is measured from 90% to 10% of V_o falling edge.
- Storage time (t_s) is measured from 50% of falling edge of LED current to 10% of V_o rising edge.
- Fall time (t_f) is measured from 10% to 90% of V_o rising edge.
- C_{ISO} is the capacitance between the input (pins 1, 2, 3 connected) and the output, (pin 4, 5, 6 connected).
- Device considered a two terminal device: Pins 1, 2, and 3 shorted together, and pins 5, 6 and 7 are shorted together.

Carrier Tape Specifications

NOTE

All dimensions are in inches (millimeters)

Reflow Profile (Black Package, No Suffix)

- Peak reflow temperature: 225°C (package surface temperature)
- Time of temperature higher than 183°C for 60–150 seconds
- One time soldering reflow is recommended
