

**THE DATASHEET OF  
MAX4800ACQI+**

## MAX4800A/MAX4802A

## Low-Charge-Injection, 8-Channel, High-Voltage Analog Switches with 20MHz Serial Interface

### General Description

The MAX4800A/MAX4802A provide high-voltage switching on eight channels for ultrasonic imaging and printer applications. The devices utilize BCDMOS process technology to provide eight high-voltage low-charge-injection SPST switches, controlled by a 20MHz serial interface. Data is clocked into an internal 8-bit shift register and retained by a programmable latch with enable and clear inputs. A power-on reset function ensures that all switches are open on power-up.

The devices operate with a wide range of high-voltage supplies including:  $V_{PP}/V_{NN} = +100V/-100V$ ,  $+185V/-15V$ , and  $+40V/-160V$ . The digital interface operates from a separate  $V_{DD}$  supply from  $+2.7V$  to  $+6V$ . Digital inputs DIN, CLK,  $\overline{LE}$ , and CLR are  $+6V$  tolerant, independent of the  $V_{DD}$  supply voltage. The MAX4802A provides integrated  $35k\Omega$  bleed resistors on each switch terminal to discharge capacitive loads.

The devices are drop-in replacements for the Supertex HV2203 and HV2303. They are available in the 48-pin LQFP, 26-bump CSBGA, and 28-pin PLCC packages. All devices are specified for the commercial  $0^{\circ}C$  to  $+70^{\circ}C$  temperature range.

### Applications

- Ultrasound Imaging
- Printers

### Features

- Fast SPI™ Interface 20MHz
- Pin-Compatible Replacement for Supertex HV2203 (MAX4800A)
- Pin-Compatible Replacement for Supertex HV2303 (MAX4802A)
- Flexible High-Voltage Supplies Up to  $V_{PP} - V_{NN} = 200V$
- Low-Charge-Injection, Low-Capacitance  $22\Omega$  Switches
- DC to 50MHz Analog-Signal Frequency Range
- $-77dB$  Off-Isolation at 5MHz
- Low  $10\mu A$  Quiescent Current
- Integrated Bleed Resistors (MAX4802A Only)
- Available in Standard PLCC, LQFP, and CSBGA Packages

SPI is a trademark of Motorola, Inc.

**Absolute Maximum Ratings**

(All voltages referenced to GND.)

V <sub>DD</sub> Logic Supply Voltage.....	-0.3V to +7V	Continuous Power Dissipation (T <sub>A</sub> = +70°C)	
V <sub>PP</sub> - V <sub>NN</sub> Supply Voltage .....	220V	26-Bump CSBGA (derate 11.8mW/°C above +70°C)....	941mW
V <sub>PP</sub> Positive Supply Voltage .....	-0.3V to (V <sub>NN</sub> + 220V)	28-Pin PLCC (derate 10.5mW/°C above +70°C) .....	842mW
V <sub>NN</sub> Negative Supply Voltage .....	+0.3V to -220V	48-Pin LQFP (derate 22.7mW/°C above +70°C) .....	1818mW
Logic Inputs $\overline{LE}$ , CLR, CLK, DIN .....	-0.3V to +7V	Operating Temperature Range.....	0°C to +70°C
DOUT .....	-0.3V to (V <sub>DD</sub> + 0.3V)	Storage Temperature Range .....	-65°C to +150°C
RGND (MAX4802A) .....	-4.5V to +0.3V	Junction Temperature.....	+150°C
COM_, NO_.....	V <sub>NN</sub> to V <sub>PP</sub>	Lead Temperature (excluding CSBGA, soldering, 10s) ..	+300°C
		Soldering Temperature (reflow)	
		28 PLCC .....	+245°C
		All other packages .....	+260°C

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

**Package Information**

<b>PACKAGE TYPE: 26 CSBGA</b>	
Package Code	X07265+1
Outline Number	<a href="#">21-0158</a>
Land Pattern Number	<a href="#">90-0184</a>
<b>THERMAL RESISTANCE, FOUR-LAYER BOARD</b>	
Junction to Ambient (θ <sub>JA</sub> )	85°C/W
Junction to Case (θ <sub>JC</sub> )	23°C/W

<b>PACKAGE TYPE: 28 PLCC</b>	
Package Code	Q28+13
Outline Number	<a href="#">21-0049</a>
Land Pattern Number	<a href="#">90-0235</a>
<b>THERMAL RESISTANCE, FOUR-LAYER BOARD</b>	
Junction to Ambient (θ <sub>JA</sub> )	44°C/W
Junction to Case (θ <sub>JC</sub> )	10°C/W

<b>PACKAGE TYPE: 48 LQFP</b>	
Package Code	C48+6
Outline Number	<a href="#">21-0054</a>
Land Pattern Number	<a href="#">90-0093</a>
<b>THERMAL RESISTANCE, FOUR-LAYER BOARD</b>	
Junction to Ambient (θ <sub>JA</sub> )	44°C/W
Junction to Case (θ <sub>JC</sub> )	10°C/W

For the latest package outline information and land patterns (footprints), go to [www.maximintegrated.com/packages](http://www.maximintegrated.com/packages). Note that a "+", "#", or "-" in the package code indicates RoHS status only. Package drawings may show a different suffix character, but the drawing pertains to the package regardless of RoHS status.

Package thermal resistances were obtained using the method described in JEDEC specification JESD51-7, using a four-layer board. For detailed information on package thermal considerations, refer to [www.maximintegrated.com/thermal-tutorial](http://www.maximintegrated.com/thermal-tutorial).

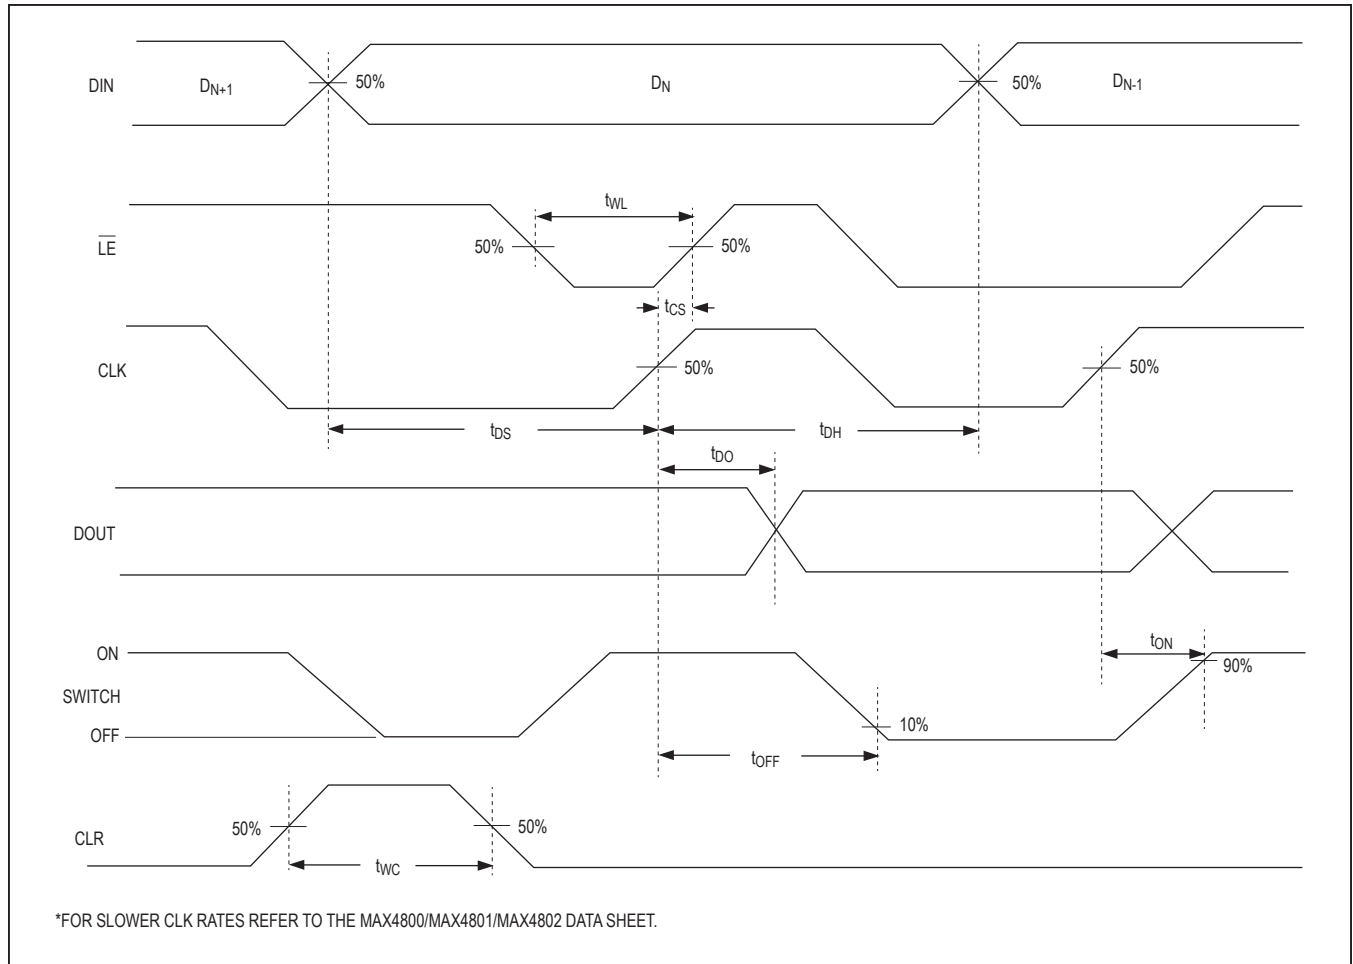

Figure 1. Serial Interface Timing\*

### Detailed Description

The MAX4800A/MAX4802A provide high-voltage switching on eight channels for ultrasound imaging and printer applications. The devices utilize BCDMOS process technology to provide eight high-voltage low-charge-injection SPST switches, controlled by a 20MHz serial interface. Data is clocked into an internal 8-bit shift register and retained by a programmable latch with enable and clear inputs. A power-on reset function ensures that all switches are open on power-up.

The devices operate with a wide range of high-voltage supplies including:  $V_{PP}/V_{NN} = +100V/-100V, +185V/-15V,$  or  $+40V/-160V$ . The digital interface operates from a separate  $V_{DD}$  supply from +2.7V to +6V. Digital inputs DIN, CLK,  $\overline{LE}$ , and CLR are +6V tolerant, independent of the  $V_{DD}$  supply voltage. The MAX4802A provides

integrated 35kΩ bleed resistors on each switch terminal to discharge capacitive loads.

The devices are drop-in replacements for the Supertex HV2203 and HV2303, respectively.

### Analog Switch

The devices allow a peak-to-peak analog-signal range from  $V_{NN} + 10V$  to  $V_{PP} - 10V$ . Analog switch inputs must be unconnected, or satisfy  $V_{NN} \leq (V_{COM\_}, V_{NO\_}) \leq V_{PP}$  during power-up and power-down.

### High-Voltage Supplies

The devices allow a wide range of high-voltage supplies. The devices operate with  $V_{NN}$  from -160V to -15V and  $V_{PP}$  from +40V to  $(V_{NN} + 200V)$ . When  $V_{NN}$  is connected to GND (single-supply applications), the devices operate with  $V_{PP}$  up to +200V.

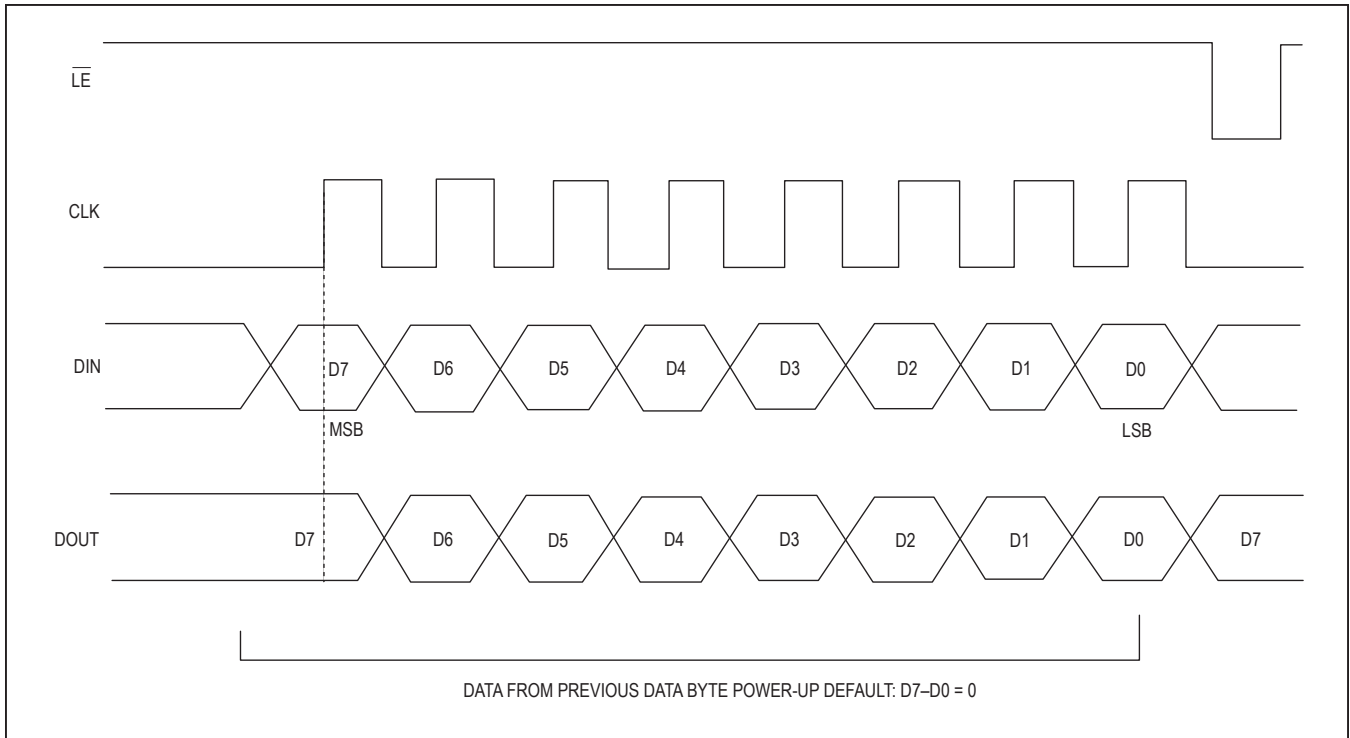

Figure 2. Latch-Enable Interface Timing

The  $V_{PP}$  and  $V_{NN}$  high-voltage supplies are not required to be symmetrical, but the voltage difference  $V_{PP} - V_{NN}$  must not exceed 200V.

**Bleed Resistors (MAX4802A)**

The MAX4802A features integrated 35kΩ bleed resistors to discharge capacitive loads such as piezoelectric transducers. Each analog-switch terminal is connected to RGND with a bleed resistor.

**Serial Interface**

The devices are controlled by a serial interface with an 8-bit serial shift register and transparent latch. Each of the eight data bits controls a single analog switch (see Table 1). Data on DIN is clocked with the most significant bit (MSB) first into the shift register on the rising edge of CLK. Data is clocked out of the shift register onto DOUT on the rising edge of CLK. DOUT reflects the status of DIN, delayed by eight clock cycles (see Figures 1 and 2).

**Latch Enable ( $\overline{LE}$ )**

Drive  $\overline{LE}$  logic-low to change the contents of the latch and update the state of the high-voltage switches (Figure 2). Drive  $\overline{LE}$  logic-high to freeze the contents of the latch and prevent changes to the switch states. To reduce noise due to clock feedthrough, drive  $\overline{LE}$  logic-high while data is clocked into the shift register. After the data shift register is loaded with valid data, pulse  $\overline{LE}$  logic-low to load the contents of the shift register into the latch.

**Latch Clear (CLR)**

The devices feature a latch clear input. Drive CLR logic-high to reset the contents of the latch to zero and open all switches. CLR does not affect the contents of the data shift register. Pulse  $\overline{LE}$  logic-low to reload the contents of the shift register into the latch.

**Power-On Reset**

The devices feature a power-on reset circuit to ensure all switches are open at power-on. The internal 8-bit serial shift register and latch are set to zero on power-up.

X = Don't care.

### Applications Information

#### Logic Levels

The devices' digital interface inputs CLK, DIN,  $\overline{LE}$ , and CLR are tolerant of up to +6V, independent of the  $V_{DD}$  supply voltage, allowing compatibility with higher voltage controllers.

#### Daisy Chaining Multiple Devices

Digital output DOUT is provided to allow the connection of multiple devices by daisy-chaining (Figure 3). Connect each DOUT to the DIN of the subsequent device in the chain. Connect CLK,  $\overline{LE}$ , and CLR inputs of all devices, and drive  $\overline{LE}$  logic-low to update all devices simultaneously. Drive CLR high to open all the switches simultaneously. Additional shift registers may be included anywhere in series with the MAX4800A/MAX4802A data chain.

### Supply Sequencing and Bypassing

The devices do not require special sequencing of the  $V_{DD}$ ,  $V_{PP}$ , and  $V_{NN}$  supply voltages; however, analog switch inputs must be unconnected, or satisfy  $V_{NN} \leq (V_{COM}, V_{NO}) \leq V_{PP}$  during power-up and power-down. Bypass  $V_{DD}$ ,  $V_{NN}$ , and  $V_{PP}$  to GND with a 0.1µF ceramic capacitor as close to the device as possible.

## Ordering Information/ Selector Guide

PART	BLEED RESISTORS	SECOND SOURCE	PIN-PACKAGE
<b>MAX4800ACXZ</b> +	No	—	26 CSBGA
MAX4800ACQI	No	HV2203PJ-G	28 PLCC
MAX4800ACCM	No	HV2203FG-G	48 LQFP
<b>MAX4802ACXZ</b> +	Yes	—	26 CSBGA
MAX4802ACQI	Yes	HV2303PJ-G	28 PLCC
MAX4802ACCM	Yes	HV2303FG-G	48 LQFP

**Note:** All devices are specified over the commercial 0°C to +70°C temperature range.

\*Future product—contact factory for availability.

+Denotes a lead(Pb)-free/RoHS-compliant package.

## Revision History

REVISION NUMBER	REVISION DATE	DESCRIPTION	PAGES CHANGED
0	5/08	Initial release	—
1	2/11	Changed the DC analog-signal frequency range to 50MHz in the <i>Features</i> section; changed the TQFP package to LQFP in the <i>General Description</i> , <i>Ordering Information</i> , <i>Features</i> , <i>Pin/Bump Configurations</i> , <i>Pin/Bump Descriptions</i> , and <i>Package Information</i>	1, 8, 14
2	4/19	Updated the <i>Electrical Characteristics</i> section	5
