

**THE DATASHEET OF
MAX6759UTTD3+T**

MAX6754–MAX6764 Low-Power, Single/Dual-Voltage Window Detectors

General Description

The MAX6754–MAX6764 low-power window detectors monitor undervoltage/overvoltage conditions on system power supplies. These devices assert when the monitored voltage is under the undervoltage and/or over the overvoltage thresholds.

The MAX6754–MAX6759/MAX6763/MAX6764 monitor a single voltage. The MAX6760/MAX6761/MAX6762 monitor dual-voltage systems. The MAX6754/MAX6755/MAX6756 provide a single undervoltage/overvoltage output and the MAX6757–MAX6764 provide independent undervoltage and overvoltage outputs. The outputs are available in push-pull or open-drain configurations.

The MAX6754–MAX6762 offer factory-fixed voltage thresholds for monitoring system voltages from 0.9V to 5V with a selectable $\pm 5\%$, $\pm 10\%$, or $\pm 15\%$ window voltage. The MAX6763/MAX6764 allow for externally adjustable thresholds. The MAX6754–MAX6762 are available in two delay-timing options (20 μ s, typ or 100ms, min). The MAX6760/MAX6761/MAX6762 also include a latched overvoltage output function and the MAX6754–MAX6762 include a manual reset input.

This family of products is available in small SOT23 and TDFN packages, and is specified over the extended temperature range of -40°C to $+125^{\circ}\text{C}$.

Applications

- Telecommunications
- Networking
- Computers/Servers
- Data Storage
- Power Metering
- DC-DC Converter Modules
- Automotive

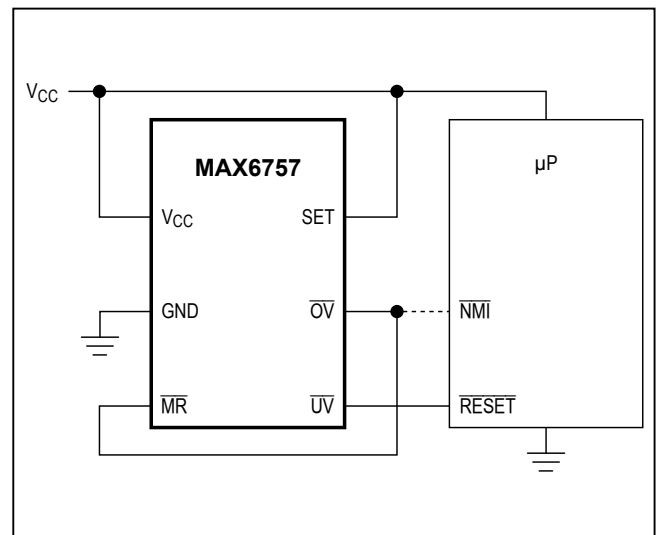

[Pin Configurations](#) appear towards end of data sheet.

[Ordering Information](#) appears at end of data sheet.

Benefits and Features

- Single/Dual-Supply Voltage Monitors
- Factory-Trimmed Window Threshold Options for 5V, 3.3V, 3V, 2.5V, 1.8V, 1.5V, 1.2V, and 0.9V Supplies
- Externally Adjustable Window Monitoring Options for Supplies Down to 0.5V
- Selectable Window Threshold Options ($\pm 5\%$, $\pm 10\%$, $\pm 15\%$)
- Single (Combined UV/OV) or Dual (Separate UV and OV) Outputs
- 20 μ s (typ) or 100ms (min) Timeout Period Options (MAX6754–MAX6762)
- Manual Reset Input (MAX6754–MAX6762)
- Latched Overvoltage Output Function (MAX6760/MAX6761/MAX6762)
- Immune to Short Voltage Transients
- Low 10 μ A Supply Current
- Low-Voltage Operation (Outputs Valid for VCC Down to 1V)
- -40°C to $+125^{\circ}\text{C}$ Operating Temperature Range
- Small SOT23 and TDFN Packages
- AEC-Q100 Qualified (IV Parts Only, Refer to [Ordering Information](#))

Typical Application Circuit

Absolute Maximum Ratings

(Voltages with respect to GND.)

V_{CC}, V_{CC2}	-0.3V to +6.5V
SET, OVLATCH, \overline{MR} , UVIN, OVIN	-0.3V to ($V_{CC} + 0.3V$)
UV, RESET, \overline{OV} (open drain)	-0.3V to +6.5V
RESET, \overline{OV} , UV, \overline{UV} , RESET (push-pull)	-0.3V to ($V_{CC} + 0.3V$)
Input/Output Current (all pins)	20mA
Continuous Power Dissipation ($T_A = +70^\circ C$)	
5-Pin SOT23-5 (derate 3.9mW/ $^\circ C$ above $T_A = +70^\circ C$) ...	312mW
6-Pin SOT23-6 (derate 8.7mW/ $^\circ C$ above $T_A = +70^\circ C$) ...	696mW
8-Pin TDFN (derate 24.4mW/ $^\circ C$ above $T_A = +70^\circ C$)	1951mW

Operating Temperature Range	-40 $^\circ C$ to +125 $^\circ C$
Junction Temperature	+150 $^\circ C$
Storage Temperature Range	-65 $^\circ C$ to +150 $^\circ C$
Lead Temperature (soldering, 10s)	+300 $^\circ C$
Soldering Temperature (reflow)	
Lead(Pb)-Free Package	+260 $^\circ C$
Containing Lead(Pb)	+240 $^\circ C$

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Package Information

5 SOT23

PACKAGE CODE	U5+1/U5+1A
Outline Number	21-0057
Land Pattern Number	90-0174
Thermal Resistance, Single-Layer Board:	
Junction to Ambient (θ_{JA})	324.3 $^\circ C/W$
Junction to Case (θ_{JC})	82 $^\circ C/W$
Thermal Resistance, Multi-Layer Board:	
Junction to Ambient (θ_{JA})	255.9 $^\circ C/W$
Junction to Case (θ_{JC})	81 $^\circ C/W$

6 SOT23

PACKAGE CODE	U6+1
Outline Number	21-0058
Land Pattern Number	90-0175
Thermal Resistance, Single-Layer Board:	
Junction to Ambient (θ_{JA})	N/A
Junction to Case (θ_{JC})	80 $^\circ C/W$
Thermal Resistance, Multi-Layer Board:	
Junction to Ambient (θ_{JA})	115 $^\circ C/W$
Junction to Case (θ_{JC})	80 $^\circ C/W$

8 TDFN

PACKAGE CODE	T833+2
Outline Number	21-0137
Land Pattern Number	90-0059
Thermal Resistance, Single-Layer Board:	
Junction to Ambient (θ_{JA})	54 $^\circ C/W$
Junction to Case (θ_{JC})	8 $^\circ C/W$
Thermal Resistance, Multi-Layer Board:	
Junction to Ambient (θ_{JA})	41 $^\circ C/W$
Junction to Case (θ_{JC})	8 $^\circ C/W$

Package Information (continued)

For the latest package outline information and land patterns (footprints), go to www.maximintegrated.com/packages. Note that a “+”, “#”, or “-” in the package code indicates RoHS status only. Package drawings may show a different suffix character, but the drawing pertains to the package regardless of RoHS status.

Package thermal resistances were obtained using the method described in JEDEC specification JESD51-7, using a four-layer board. For detailed information on package thermal considerations, refer to www.maximintegrated.com/thermal-tutorial.

Electrical Characteristics

($V_{CC} = 1.0V$ to $6.0V$, $V_{CC2} = 0$ to $6.0V$ (MAX6760–MAX6762), $T_A = -40^{\circ}C$ to $+125^{\circ}C$, unless otherwise noted. Typical values are at $T_A = +25^{\circ}C$.) (Note 1)

		Any $V_{CC} \geq 4.75V$, $I_{SOURCE} = 4.0mA$, output asserted	$0.8 \times V_{CC}$			

Electrical Characteristics (continued)

($V_{CC} = 1.0V$ to $6.0V$, $V_{CC2} = 0$ to $6.0V$ (MAX6760–MAX6762), $T_A = -40^\circ C$ to $+125^\circ C$, unless otherwise noted. Typical values are at $T_A = +25^\circ C$.) (Note 1)

PARAMETER	SYMBOL	CONDITIONS	MIN	TYP	MAX	UNITS
\overline{OV} Output Low (Open-Drain or Push-Pull)	V_{OL}	Any $V_{CC} \geq 1.98V$, $I_{SINK} = 1.4mA$, output asserted			0.3	V
		Any $V_{CC} \geq 2.75V$, $I_{SINK} = 2.0mA$, output asserted			0.3	
		Any $V_{CC} \geq 3.63V$, $I_{SINK} = 3.0mA$, output asserted			0.3	
		Any $V_{CC} \geq 5.5V$, $I_{SINK} = 4.0mA$, output asserted			0.3	
\overline{OV} Output High (Push-Pull)	V_{OH}	Any $V_{CC} \geq 1.0V$, $I_{SOURCE} = 50\mu A$, output deasserted	$0.8 \times V_{CC}$			V
		Any $V_{CC} \geq 1.2V$, $I_{SOURCE} = 100\mu A$, output deasserted	$0.8 \times V_{CC}$			
		Any $V_{CC} \geq 1.98V$, $I_{SOURCE} = 1.4mA$, output deasserted	$0.8 \times V_{CC}$			
		Any $V_{CC} \geq 2.75V$, $I_{SOURCE} = 2.0mA$, output deasserted	$0.8 \times V_{CC}$			
		Any $V_{CC} \geq 3.63V$, $I_{SOURCE} = 3.0mA$, output deasserted	$0.8 \times V_{CC}$			
		Any $V_{CC} \geq 5.5V$, $I_{SOURCE} = 4.5mA$, output deasserted	$0.8 \times V_{CC}$			
\overline{RESET} , \overline{UV} , \overline{OV} Output Open-Drain Leakage Current	I_{LKG}	Output not asserted			1	μA

Note 1: Devices are production tested at $+25^\circ C$. Overtemperature limits are guaranteed by design.

Note 2: Voltage monitoring requires that V_{CC} must be greater than or equal to $1.4V$, but outputs remain asserted in the correct state for V_{CC} down to $1.0V$.

Note 3: Guaranteed by design.

Note 4: For D0 window detector options and \overline{OV} outputs, startup delay time is the time required for the internal reference/circuitry to reach specified accuracy after the monitor is powered up from GND.

Note 5: The input bias voltage is based off of V_{CC} . The minimum value is given by the equation $(0.1 \times V_{CC} + 0.51)V$ and the maximum value is given by $(0.9 \times V_{CC} - 0.51)V$.

Typical Operating Characteristics

($V_{CC} = 5V$, $V_{CC2} = 3.3V$, $T_A = +25^\circ C$, unless otherwise noted.)

Pin Configurations

Pin Description

PIN				NAME	FUNCTION
MAX6754/ MAX6755/ MAX6756	MAX6757/ MAX6758/ MAX6759	MAX6760/ MAX6761/ MAX6762	MAX6763/ MAX6764		
1	1	1	—	V _{CC}	Power Voltage Input. V _{CC} powers the device. V _{CC} is the monitored voltage. Connect V _{CC} of the MAX6756 to an RC filter to ensure proper operation during extreme transition events. A 100Ω resistor in series with a 0.1μF bypass capacitor is sufficient for most applications. See Figure 9 for more details.
—	—	—	1		Power Input. V _{CC} powers the device.
2	2	2	2	GND	Ground
3	3	8	—	MR	Active-Low Manual Reset Input. Drive MR low to assert undervoltage and reset outputs. The asserted output remains asserted for the specified propagation delay period after MR goes high. MR is internally pulled up to V _{CC} through a 26kΩ resistor.
4	—	—	—	RESET/ RESET	Reset Output. The Reset Output asserts when V _{CC} is below the selected UV _{TH} threshold or above the selected OV _{TH} threshold. Reset output deasserts after the specified timeout period after V _{CC} rises above the UV _{TH} threshold or drops below the OV _{TH} threshold. MAX6754: Active-low push-pull output (RESET). MAX6755: Active-high push-pull output (RESET). MAX6756: Active-low open-drain output (RESET).

Pin Description (continued)

PIN				NAME	FUNCTION
MAX6754/ MAX6755/ MAX6756	MAX6757/ MAX6758/ MAX6759	MAX6760/ MAX6761/ MAX6762	MAX6763/ MAX6764		
5	6	4	—	SET	Threshold Window Select Input. SET configures the undervoltage and overvoltage window range for the internal detectors. Connect SET to GND for $\pm 5\%$ window, or to V_{CC} for $\pm 10\%$ window. Bias SET to $V_{CC}/2$ for a $\pm 15\%$ window.
—	4	6	—	UV/ \overline{UV}	Undervoltage Output. UV/ \overline{UV} asserts when the monitored supply/supplies are below the UV_{TH} thresholds or \overline{MR} is low. UV/ \overline{UV} deasserts after the specified timeout period when the monitored supply/supplies rise above the UV_{TH} thresholds or for the specified propagation delay after \overline{MR} goes high. MAX6757/MAX6760: Active-low push-pull output (\overline{UV}). MAX6758/MAX6761: Active-high push-pull output (\overline{UV}). MAX6759/MAX6762: Active-low open-drain output (\overline{UV}).
—	—	3	—	V_{CC2}	V_{CC2} Voltage Input. Input for the second window voltage monitor, and device output power supply when $V_{CC2} > V_{CC}$.
—	5	5	5	\overline{OV}	Active-Low Overvoltage Output. \overline{OV} asserts low when the monitored supply/supplies are above their overvoltage threshold (OV_{TH}). \overline{OV} goes high impedance immediately when the monitored supply/supplies drop below OV_{TH} . There is no timeout delay period for the \overline{OV} output. For MAX6763/MAX6764, \overline{OV} is low when OVIN is above the internal 0.5V threshold. \overline{OV} is high when OVIN is below the internal 0.5V threshold. MAX6757–MAX6762: Active-low open-drain output. MAX6763: Active-low push-pull output. MAX6764: Active-low open-drain output.
—	—	7	—	OVLATCH	Overvoltage Output Latch Control Input. Drive OVLATCH high to latch the overvoltage output for any V_{CC} or V_{CC2} overvoltage condition. Drive OVLATCH low to clear the latch after overvoltage conditions have been removed. The latch is transparent when OVLATCH is connected to GND. OVLATCH is a high-impedance input. Use external pullup or pulldown.
—	—	—	3	UVIN	Undervoltage Input. \overline{UV} is low when UVIN is below the internal 0.5V threshold. \overline{UV} is high when UVIN is above the internal 0.5V threshold.
—	—	—	4	\overline{UV}	Undervoltage Output. \overline{UV} is low when UVIN is below the internal 0.5V threshold. \overline{UV} is high when UVIN is above the internal 0.5V threshold. There is no timeout delay period for the \overline{UV} output.
—	—	—	6	OVIN	Overvoltage Input. \overline{OV} is low when OVIN is above the internal 0.5V threshold. \overline{OV} is high when OVIN is below the internal 0.5V threshold.
—	—	—	—	EP	Exposed Pad (TDFN Only). EP is internally connected to GND. Leave EP unconnected or connect to GND.

Detailed Description

The MAX6754–MAX6764 are low-power window voltage detectors capable of monitoring undervoltage and overvoltage conditions on system power supplies. Whenever a monitored voltage falls below its undervoltage threshold or exceeds its overvoltage threshold, these devices assert their outputs to notify the system (see [Functional Diagrams](#)).

The MAX6754/MAX6755/MAX6756 are single-voltage window detectors with internally fixed nominal voltage, externally adjustable set window, single reset undervoltage/overvoltage output, and a manual reset input.

The MAX6757/MAX6758/MAX6759 are single-voltage window detectors with internally set nominal voltage, externally adjustable set window, separate undervoltage/overvoltage outputs, and manual reset input.

The MAX6760/MAX6761/MAX6762 are dual-voltage window detectors with internally/externally set nominal voltages, externally adjustable set window, separate undervoltage/overvoltage outputs, manual reset input, and overvoltage latch functions.

The MAX6763/MAX6764 are single adjustable window detectors with separate undervoltage/overvoltage outputs.

The MAX6754–MAX6762 offer factory-fixed voltage thresholds for monitoring system voltages from 0.9V to 5V. The MAX6754–MAX6762 include a SET function to select the window voltage to $\pm 5\%$, $\pm 10\%$, or $\pm 15\%$. The MAX6763/MAX6764 allow for externally adjustable upper

and lower voltage thresholds to be set externally (down to 0.5V). The MAX6754–MAX6762 are available with two timing options (20 μ s propagation delay or 100ms minimum reset timeout).

Supply Voltages

V_{CC} is the power-supply input and the monitored voltage of the MAX6754–MAX6762. These devices feature a factory-trimmed V_{CC} and V_{CC2} divider that sets the nominal input range (see [Table 1](#) and [Table 2](#)). V_{CC} for the MAX6763/MAX6764 is the power supply of the device and not the monitored voltage. For noisy systems, bypass V_{CC} and V_{CC2} each with a 0.1 μ F capacitor to GND. Connect V_{CC} of the MAX6756 to an RC filter to ensure proper operation during extreme transition events. A 100 Ω resistor in series with a 0.1 μ F bypass capacitor is sufficient for most applications. See [Figure 9](#) for more details.

Setting the Adjustable Nominal Voltage Threshold

The MAX6760/MAX6761/MAX6762 (versions with suffixes LA, TA, RA, ZA, WA, and AA) offer adjustable nominal voltage threshold to monitor V_{CC2} . Use an external voltage-divider to set the voltage at V_{CC2} to 0.4255V. Configure SET to select a monitor window of $\pm 5\%$, $\pm 10\%$, or $\pm 15\%$ (see [Figure 5](#)). The MAX6760/MAX6761/MAX6762 suffix AA monitor only V_{CC2} and do not monitor V_{CC} .

Figure 5. Setting the Threshold Voltage of V_{CC2}

Figure 6. Setting the Undervoltage/Overvoltage Window

Choose R2 to have a resistance of up to 500kΩ. Calculate R1 by:

$$R1 = ((V+ - 0.4255V) \times R2) / 0.4255V$$

The MAX6763/MAX6764 provide inputs to a window detector allowing the programming of the threshold voltage to within VCC (see Figure 6).

Choose R1, R2, and R3 such that:

$$(V+ / (R1 + R2 + R3)) \geq 1\mu A$$

SET

The MAX6754–MAX6762 allow the setting of the window voltage range of the voltage detector. Connect SET to GND to set a ±5% window. Connect SET to VCC for a ±10% window. Bias SET to VCC / 2 for a ±15% window.

Manual Reset (\overline{MR})

The MAX6754–MAX6762 include an active-low manual reset input. Drive \overline{MR} low to assert a reset output (MAX6754/MAX6755/MAX6756) or an undervoltage output (MAX6757/MAX6758/MAX6759). The output remains asserted for the specified propagation delay time (see Figure 7a and Figure 7b) after \overline{MR} goes high. \overline{MR} is internally pulled to VCC with a 26kΩ resistor.

Overvoltage Latch Control Input (OVLATCH)

The MAX6760/MAX6761/MAX6762 provide an overvoltage latch control input (OVLATCH). Drive OVLATCH high to latch the overvoltage output for any VCC or VCC2 overvoltage condition. Drive OVLATCH low to clear the latch after overvoltage conditions have been removed. The latch is transparent when OVLATCH is connected to GND. OVLATCH is a high impedance input. Use external pullup or pulldown.

Reset, Undervoltage, and Overvoltage Outputs (\overline{RESET} , $\overline{RESE\overline{T}}$, \overline{UV} , UV, OV)

\overline{RESET} , $\overline{RESE\overline{T}}$, \overline{UV} , UV, and OV outputs assert when the monitored supply is below the selected UVTH threshold or above the selected OVTH threshold. The reset output deasserts after the specified timeout period when the monitored supply rises above the UVTH threshold or drops below the OVTH threshold. The push-pull versions are referenced to VCC.

The MAX6760/MAX6761/MAX6762 monitor both VCC and VCC2. An undervoltage/overvoltage condition on either voltage supply asserts the corresponding output. $\overline{RESE\overline{T}}$ and \overline{UV} are guaranteed to be in the correct logic state when VCC or VCC2 > 1V.

Applications Information

Microprocessor Monitoring

Figure 8 shows a microprocessor monitoring circuit. An overvoltage condition on either the core or I/O supply

turns the SCR on, blowing the fuse to disconnect the circuit from the power source. An optional capacitor (C1) on the gate of the SCR provides additional transient immunity against nuisance trips.

Devices are available in both leaded and lead(Pb)-free packaging. Specify lead-free by replacing “-T” with “+T” when ordering.

/V denotes an automotive qualified part.

Insert the threshold level suffixes for V_{CC} and V_{CC2} (see [Table 1](#) and [Table 2](#)) after UK, UT, or TA. For the MAX6754–MAX6759, insert only the V_{CC} threshold suffix after the UK or UT. Insert the reset timeout delay (see [Table 3](#)) after D to complete the part number. For example, the MAX6760TALTD3-T provides a V_{CC} threshold of 5V, a V_{CC2} threshold of 3.3V, and a 100ms minimum reset timeout period. Sample stock is generally held on standard versions only (see the [Standard Versions Table](#)).

Standard versions have an order increment requirement of 2500 pieces. Nonstandard versions have an order increment requirement of 10,000 pieces. Contact factory for availability.

Revision History

REVISION NUMBER	REVISION DATE	DESCRIPTION	PAGES CHANGED
4	1/11	Added <i>I_V</i> to the MAX6759 <i>Ordering Information</i> and added soldering temperature in the <i>Absolute Maximum Rating</i> section	2, 16
5	10/15	Adding <i>I_V</i> part number of MAX6756 to data sheet	1, 16–18
6	11/15	Updated package code for 5 SOT23 in <i>Ordering Information</i> section	19
7	3/16	Re-added <i>Standard Versions</i> table	17–18
8	6/16	Removed top mark information from <i>Standard Versions</i> table	17–18
9	3/17	Moved <i>Ordering Information</i> and <i>Selector Guide</i> to end of data sheet and <i>Pin Configurations</i> to before <i>Pin Description</i> table; updated <i>Pin Description</i> (row 1), <i>Supply Voltages</i> section, and added Figure 9	1, 9, 13, 16, 17
10	11/17	Added AEC statement to <i>Benefits and Features</i> section	1
11	3/19	Updated <i>Package Information</i>	2, 17
