GENERAL DESCRIPTION

The DS21458DK is an easy-to-use evaluation board for the DS21458 quad T1/E1/J1 transceiver. The DS21458DK is intended to be used as a daughter card with the DK101 motherboard or the DK2000 motherboard. The DS21458DK comes complete with a DS21458 quad SCT, transformers, termination resistors, configuration switches, line-protection circuitry, network connectors, and motherboard connectors. The DK101/DK2000 motherboard and Dallas' ChipView software give point-and-click access to configuration and status registers from a Windows®-based PC. On-board LEDs indicate receive loss-of-signal and interrupt status. An on-board FPGA contains mux logic to connect framer ports to one another or to the DK2000 in a variety of configurations.

Each DS21458DK is shipped with a free DK101 motherboard. For complex applications, the DK2000 high-performance demo kit motherboard can be purchased separately.

BASIC CONFIGURATION

This design kit relies upon several supporting files, which are available for downloading on our website at www.maxim-ic.com/telecom. See the DS21458DK QuickView data sheet for these files.

Hardware Configuration

Using the DK101 Processor Board:

- Connect the daughter card to the DK101 processor board.
- Supply 3.3V to the banana-plug receptacles marked GND and VCC_3.3V. (The external 5V connector is unused. Additionally, the TIM 5V supply headers are unused.)
- All processor board DIP switch settings should be in the ON position with exception of the flash programming switch, which should be OFF.
- From the Programs menu, launch the host application named ChipView.EXE. Run the ChipView application. If the default installation options were used, click the Start button on the Windows toolbar and select Programs → ChipView → ChipView.

Using the DK2000 Processor Board:

- Connect the daughter card to the DK2000 processor board.
- Connect J1 to the power supply that is delivered with the kit. Alternately, a PC power supply may be connected to connector J2.
- From the Programs menu, launch the host application named ChipView.EXE. Run the ChipView application. If the default installation options were used, click the Start button on the Windows toolbar and select Programs → ChipView → ChipView.

General

- Upon power-up, the RLOS LEDs (green) will not be lit, the INT LED (red) will not be lit, but the FPGA Status LED (green) will be lit.
- When operating in E1 mode, slide SW1–SW4 to E1 Mode (grounding the BNC shell). When operating in T1 mode, slide SW1–SW4 to T1 Mode.

Miscellaneous

- Clock frequencies and certain pin bias levels are provided by a register-mapped FPGA that is on the DS21458 daughter card.
- The definition file for this FPGA is named DS21458DC_FPGA.def. See Table 2 for the FPGA Register Map definitions. A drop-down menu on the top of the screen allows for switching between definition files.
- All files referenced above are available for download as described in the *Basic Configuration* section.

Quick Setup (Demo Mode)

- The PC will load ChipView offering a choice among DEMO MODE, REGISTER VIEW, and TERMINAL MODE. Select Demo Mode.
- The program will request a configuration file. Select among the displayed files, which are DS2155_E1_DSNCOM_DRVR.cfg or DS2155_T1_DSNCOM_DRVR.cfg.
- The Demo Mode screen will appear. Upon external loopback the RLOS indicators will turn green.
- Note: Demo Mode interacts with the device driver, which resides in the DK101/DK2000 firmware. The current implementation of this driver is for one device. As such, the demo mode will only interact with Port 1. With minor changes, the device driver is extendible to N devices.

Quick Setup (Register View)

- The PC will load ChipView offering a choice among DEMO MODE, REGISTER VIEW, and TERMINAL MODE. Select Register View.
- The program will request a definition file. Select DS21458DC_FPGA.def through the Links section. This will also load DS21458DC.def.
- The Register View Screen will appear, showing the register names, acronyms, and values for the DS21458.
- Predefined Register settings for several functions are available as initialization files.
  - INI files are loaded by selecting the menu File→Reg Ini File→Load Ini File.
  - Load the INI file DS21458_T1_BERT_ESF.ini.
  - After loading the INI file, the following may be observed:
    - The RLOS LEDs turns green upon external loopback.
    - All four ports of the DS21458 begin transmitting a Daly pattern. When external loopback is applied, the BERT bit count registers BBC1 to BBC3 and BEC1 to BEC3 may be updated by clearing and setting BC1.LC and clicking the ‘Read All’ button.
