### ■ DESCRIPTION

The MB90350-series with 1 channel FULL-CAN\* interface and Flash ROM is especially designed for automotive and industrial applications. Its main feature is the on-board CAN interface, which conforms to V2.0 Part A and Part B, while supporting a very flexible message buffer scheme and so offering more functions than a normal full CAN approach. With the new 0.35 μm CMOS technology, Fujitsu now offers on-chip Flash-ROM program memory up to 128 Kbytes.

The power supply (3 V) is supplied to the internal MCU core from an internal regulator circuit. This creates a major advantage in terms of EMI and power consumption.

The internal PLL clock frequency multiplier provides an internal 42 ns instruction execution time from an external 4 MHz clock. Also, the clock monitor function can monitor main clock and sub clock independently.

As the peripheral resources, the unit features a 4-channel Output Compare Unit, 6-channel Input Capture Unit, 2 separate 16-bit freerun timers, 2-channel UART and 15-channel 8/10-bit A/D converter.

\* : Controller Area Network (CAN) - License of Robert Bosch GmbH

Note : F<sup>2</sup>MC stands for FUJITSU Flexible Microcontroller, a registered trademark of FUJITSU LIMITED.

### ■ PACKAGES

# MB90350 Series

## ■ FEATURES

### • Clock

- Built-in PLL clock frequency multiplication circuit
- Selection of machine clocks (PLL clocks) is allowed among frequency division by two on oscillation clock, and multiplication of 1 to 6 times of oscillation clock (for 4 MHz oscillation clock, 4 MHz to 24 MHz).
- Operation by sub clock (up to 50 kHz : 100 kHz oscillation clock divided by two) is allowed. (devices without S-suffix only)
- Minimum execution time of instruction : 42 ns (when operating with 4-MHz oscillation clock, and 6-time multiplied PLL clock).
- Built-in clock modulation circuit

### • 16 Mbytes CPU memory space

- 24-bit internal addressing

### • Clock monitor function (MB90x356x and MB90x357x only)

- Main clock or sub clock is monitored independently.
- Internal CR oscillation clock (100 kHz typical) can be used as sub clock.

### • Instruction system best suited to controller

- Wide choice of data types (bit, byte, word, and long word)
- Wide choice of addressing modes (23 types)
- Enhanced multiply-divide instructions with sign and RETI instructions
- Enhanced high-precision computing with 32-bit accumulator

### • Instruction system compatible with high-level language (C language) and multitask

- Employing system stack pointer
- Enhanced various pointer indirect instructions
- Barrel shift instructions

### • Increased processing speed

- 4-byte instruction queue

### • Powerful interrupt function

- Powerful 8-level, 34-condition interrupt feature
- Up to 8 channels external interrupts are supported.

### • Automatic data transfer function independent of CPU

- Extended intelligent I/O service function (EI<sup>2</sup>OS) : up to 16 channels
- DMA : up to 16 channels

### • Low power consumption (standby) mode

- Sleep mode (a mode that halts CPU operating clock)
- Main timer mode (a timebase timer mode switched from the main clock mode)
- PLL timer mode (a timebase timer mode switched from the PLL clock mode)
- Watch mode (a mode that operates sub clock and watch timer only)
- Stop mode (a mode that stops oscillation clock and sub clock)
- CPU intermittent operation mode

### • Process

- CMOS technology

(Continued)

- **I/O port**
  - General-purpose input/output port (CMOS output)
    - 49 ports (devices without S-suffix : devices that correspond to sub clock)
    - 51 ports (devices with S-suffix : devices that do not correspond to sub clock)
- **Sub clock pin (X0A, X1A)**
  - Yes (using the external oscillation) : devices without S-suffix
  - No (using the sub clock mode at internal CR oscillation) : devices with S-suffix
- **Timer**
  - Timebase timer, watch timer, watchdog timer : 1 channel
  - 8/16-bit PPG timer : 8-bit × 10 channels or 16-bit × 6 channels
  - 16-bit reload timer : 4 channels
  - 16-bit input/output timer
    - 16-bit freerun timer : 2 channels (FRT0 : ICU0/1, FRT1 : ICU 4/5/6/7, OCU 4/5/6/7)
    - 16-bit input capture: (ICU) : 6 channels
    - 16-bit output compare : (OCU) : 4 channels
- **FULL-CAN interface : 1 channel**
  - Compliant with Ver2.0 part A and Ver2.0 part B CAN specifications
  - Flexible message buffering (mailbox and FIFO buffering can be mixed)
  - CAN wake-up function
- **UART (LIN/SCI) : 2 channels**
  - Equipped with full-duplex double buffer
  - Clock-asynchronous or clock-synchronous serial transmission is available.
- **I<sup>2</sup>C interface\* : 1 channel**
  - Up to 400 Kbit/s transfer rate
- **DTP/External interrupt : 8 channels, CAN wakeup : 1 channel**
  - Module for activation of extended intelligent I/O service (EI<sup>2</sup>OS), DMA, and generation of external interrupt by external input.
- **Delay interrupt generator module**
  - Generates interrupt request for task switching.
- **8/10-bit A/D converter : 15 channels**
  - Resolution is selectable between 8-bit and 10-bit.
  - Activation by external trigger input is allowed.
  - Conversion time : 3 μs (at 24-MHz machine clock, including sampling time)
- **Program patch function**
  - Address matching detection for 6 address pointers.
- **Capable of changing input voltage level for port**
  - Automotive/CMOS-Schmitt (initial level is Automotive in single chip mode)
  - TTL level (corresponds to external bus pins only, initial level of these pins is TTL in external bus mode)
- **Low voltage/CPU operation detection reset (devices with T-suffix)**
  - Detects low voltage (4.0 V ± 0.3 V) and resets automatically
  - Resets automatically when program is runaway and counter is not cleared within interval time (approx. 262 ms : external 4 MHz)

(Continued)

# MB90350 Series

(Continued)

- **Dual operation flash memory (only flash memory devices with A-suffix)**

- Erase/write and read can be executed in the different bank (Upper Bank/Lower Bank) at the same time.

- **Models that support + 125 °C**

- Devices without A-suffix (excluding evaluation device) : The maximum operating frequency is 16 MHz (at  $T_A = +125\text{ °C}$ ) .
- Devices with A-suffix (excluding evaluation device) : The maximum operating frequency is 24 MHz (at  $T_A = +125\text{ °C}$ ) .

- **Flash security function**

- Protects the content of Flash memory (MB90F352x and MB90F357x only)

- **External bus interface**

- 4 Mbytes external memory space

\* : I<sup>2</sup>C license :

Purchase of Fujitsu I<sup>2</sup>C components conveys a license under the Philips I<sup>2</sup>C Patent Rights to use, these components in an I<sup>2</sup>C system provided that the system conforms to the I<sup>2</sup>C Standard Specification as defined by Philips.

Part Number	MB90F351, MB90F352	MB90F351S, MB90F352S	MB90F351A, MB90F352A	MB90F351TA, MB90F352TA	MB90F351AS, MB90F352AS	MB90F351TAS, MB90F352TAS
CPU	F <sup>2</sup> MC-16LX CPU					
System clock	On-chip PLL clock multiplier (×1, ×2, ×3, ×4, ×6, 1/2 when PLL stops) Minimum instruction execution time : 42 ns (oscillation clock 4 MHz, PLL × 6)					
ROM	Flash memory 64Kbytes : MB90F351(S) 128Kbytes : MB90F352(S)		Dual operation flash memory 64Kbytes : MB90F351A(S), MB90F351TA(S) 128Kbytes : MB90F352A(S), MB90F352TA(S)			
RAM	4 Kbytes					
Emulator-specific power supply*1	—					
Sub clock pin (X0A, X1A) (Max 100 kHz)	Yes	No	Yes		No	
Clock monitor function	No					
Low voltage/CPU operation detection reset	No		No	Yes	No	Yes
Operating voltage range	3.5 V to 5.5 V : at normal operating (not using A/D converter) 4.0 V to 5.5 V : at using A/D converter/Flash programming 4.5 V to 5.5 V : at using external bus					
Operating temperature range	−40 °C to +105 °C (+125 °C up to 16 MHz machine clock)			−40 °C to +125 °C		
Package	LQFP-64					
UART	2 channels					
	Wide range of baud rate settings using a dedicated reload timer Special synchronous options for adapting to different synchronous serial protocols LIN functionality working either as master or slave LIN device					
I <sup>2</sup> C (400 Kbps)	1 channel					
A/D Converter	15 channels					
	10-bit or 8-bit resolution Conversion time : Min 3 μs includes sample time (per one channel)					
16-bit Reload Timer (4 channels)	Operation clock frequency : $f_{sys}/2^1$ , $f_{sys}/2^3$ , $f_{sys}/2^5$ ( $f_{sys}$ = Machine clock frequency) Supports External Event Count function.					
16-bit I/O Timer (2 channels)	I/O Timer 0 (clock input FRCK0) corresponds to ICU 0/1. I/O Timer 1 (clock input FRCK1) corresponds to ICU 4/5/6/7, OCU 4/5/6/7.					
	Signals an interrupt when overflowing. Supports Timer Clear when a match with Output Compare (Channel 0, 4) . Operation clock frequency : $f_{sys}$ , $f_{sys}/2^1$ , $f_{sys}/2^2$ , $f_{sys}/2^3$ , $f_{sys}/2^4$ , $f_{sys}/2^5$ , $f_{sys}/2^6$ , $f_{sys}/2^7$ ( $f_{sys}$ = Machine clock frequency)					
16-bit Output Compare	4 channels					
	Signals an interrupt when 16-bit I/O Timer matches with output compare registers. A pair of compare registers can be used to generate an output signal.

16-bit Input Capture	6 channels					
	Retains freerun timer value by (rising edge, falling edge or rising & falling edge), signals an interrupt.					
8/16-bit Programmable Pulse Generator	6 channels (16-bit)/10 channels (8-bit) 8-bit reload counters × 12 8-bit reload registers for L pulse width × 12 8-bit reload registers for H pulse width × 12					
	Supports 8-bit and 16-bit operation modes. A pair of 8-bit reload counters can be configured as one 16-bit reload counter or as 8-bit prescaler + 8-bit reload counter. Operation clock frequency : fsys, fsys/2 <sup>1</sup> , fsys/2 <sup>2</sup> , fsys/2 <sup>3</sup> , fsys/2 <sup>4</sup> or 128 μs@fosc = 4 MHz (fsys = Machine clock frequency, fosc = Oscillation clock frequency)					
CAN Interface	1 channel					
	Conforms to CAN Specification Version 2.0 Part A and B. Automatic re-transmission in case of error Automatic transmission responding to Remote Frame Prioritized 16 message buffers for data and ID Supports multiple messages. Flexible configuration of acceptance filtering : Full bit compare/Full bit mask/Two partial bit masks Supports up to 1 Mbps.					
External Interrupt	8 channels					
	Can be used rising edge, falling edge, starting up by H/L level input, external interrupt, extended intelligent I/O services (EI <sup>2</sup> OS) and DMA.					
D/A converter	—					
I/O Ports	Virtually all external pins can be used as general purpose I/O port. All push-pull outputs Bit-wise settable as input/output or peripheral signal Settable as CMOS schmitt trigger/ automotive inputs TTL input level settable for external bus (only for external bus pin)					
Flash Memory	Supports automatic programming, Embedded Algorithm™*2 Write/Erase/Erase-Suspend/Resume commands A flag indicating completion of the algorithm Number of erase cycles : 10,000 times Data retention time : 10 years Boot block configuration Erase can be performed on each block. Block protection with external programming voltage Flash Security Feature for protecting the content of the Flash (MB90F352x only)

Part Number Parameter	MB90356A, MB90357A	MB90356TA, MB90357TA	MB90356AS, MB90357AS	MB90356TAS, MB90357TAS	MB90V340A- 103	MB90V340A- 104
16-bit Output Compare	4 channels				8 channels	
	Signals an interrupt when 16-bit I/O Timer matches with output compare registers. A pair of compare registers can be used to generate an output signal.					
16-bit Input Capture	6 channels				8 channels	
	Retains freerun timer value by (rising edge, falling edge or rising & falling edge), signals an interrupt.					
8/16-bit Programmable Pulse Generator	6 channels (16-bit)/10 channels (8-bit) 8-bit reload counters × 12 8-bit reload registers for L pulse width × 12 8-bit reload registers for H pulse width × 12				8 channels (16-bit)/16 channels (8-bit) 8-bit reload counters × 16 8-bit reload registers for L pulse width × 16 8-bit reload registers for H pulse width × 16	
	Supports 8-bit and 16-bit operation modes. A pair of 8-bit reload counters can be configured as one 16-bit reload counter or as 8-bit prescaler + 8-bit reload counter. Operation clock frequency : $f_{sys}$ , $f_{sys}/2^1$ , $f_{sys}/2^2$ , $f_{sys}/2^3$ , $f_{sys}/2^4$ or $128 \mu s @ f_{osc} = 4 \text{ MHz}$ ( $f_{sys}$ = Machine clock frequency, $f_{osc}$ = Oscillation clock frequency)					
CAN Interface	1 channel				3 channels	
	Conforms to CAN Specification Version 2.0 Part A and B. Automatic re-transmission in case of error Automatic transmission responding to Remote Frame Prioritized 16 message buffers for data and ID Supports multiple messages. Flexible configuration of acceptance filtering : Full bit compare/Full bit mask/Two partial bit masks Supports up to 1 Mbps.					
External Interrupt	8 channels				16 channels	
	Can be used rising edge, falling edge, starting up by H/L level input, external interrupt, extended intelligent I/O services (EI <sup>2</sup> OS) and DMA.					
D/A converter	—				2 channels	
I/O Ports	Virtually all external pins can be used as general purpose I/O port. All push-pull outputs Bit-wise settable as input/output or peripheral module signal Settable as CMOS schmitt trigger/ automotive inputs TTL input level settable for external bus (only for external bus pin)					
Flash Memory	—

## ■ PIN DESCRIPTION

Pin No.	Pin name	Circuit type	Function
LQFP64*			
46	X1	A	Oscillation output pin
47	X0		Oscillation input pin
45	$\overline{\text{RST}}$	E	Reset input pin
3 to 8	P62 to P67	I	General purpose I/O ports
	AN2 to AN7		Analog input pins for A/D converter
	PPG4 (5), 6 (7), 8 (9), A (B), C (D), E (F)		Output pins for PPGs
9	P50	O	General purpose I/O port
	AN8		Analog input pin for A/D converter
	SIN2		Serial data input pin for UART2
10	P51	I	General purpose I/O port
	AN9		Analog input pin for A/D converter
	SOT2		Serial data output pin for UART2
11	P52	I	General purpose I/O port
	AN10		Analog input pin for A/D converter
	SCK2		Serial clock I/O pin for UART2
12	P53	I	General purpose I/O port
	AN11		Analog input pin for A/D converter
	TIN3		Event input pin for reload timer3
13	P54	I	General purpose I/O port
	AN12		Analog input pin for A/D converter
	TOT3		Output pin for reload timer3
14, 15	P55, P56	I	General purpose I/O ports
	AN13, AN14		Analog input pins for A/D converter
16	P42	F	General purpose I/O port
	IN6		Data sample input pin for input capture ICU6
	RX1		RX input pin for CAN1
	INT9R		External interrupt request input pin for INT9
17	P43	F	General purpose I/O port
	IN7		Data sample input pin for input capture ICU7
	TX1		TX output pin for CAN1
19, 20	P40, P41	F	General purpose I/O ports (devices with S-suffix and MB90V340A-101/103)
	X0A, X1A	B	X0A : Oscillation input pins for sub clock X1A : Oscillation output pins for sub clock (devices without S-suffix and MB90V340A-102/104)

# MB90350 Series

Pin No. LQFP64*	Pin name	Circuit type	Function
24 to 31	P00 to P07	G	General purpose I/O ports. The register can be set to select whether to use a pull-up resistor. This function is enabled in single-chip mode.
	AD00 to AD07		Input/output pins of external address data bus lower 8 bits. This function is enabled when the external bus is enabled.
	INT8 to INT15		External interrupt request input pins for INT8 to INT15
32	P10	G	General purpose I/O port. The register can be set to select whether to use a pull-up resistor. This function is enabled in single-chip mode.
	AD08		Input/output pin for external bus address data bus bit 8. This function is enabled when external bus is enabled.
	TIN1		Event input pin for reload timer1
33	P11	G	General purpose I/O port. The register can be set to select whether to use a pull-up resistor. This function is enabled in single-chip mode.
	AD09		Input/output pin for external bus address data bus bit 9. This function is enabled when external bus is enabled.
	TOT1		Output pin for reload timer1
34	P12	N	General purpose I/O port. The register can be set to select whether to use a pull-up resistor. This function is enabled in single-chip mode.
	AD10		Input/output pin for external bus address data bus bit 10. This function is enabled when external bus is enabled.
	SIN3		Serial data input pin for UART3
	INT11R		External interrupt request input pin for INT11
35	P13	G	General purpose I/O port. The register can be set to select whether to use a pull-up resistor. This function is enabled in single-chip mode.
	AD11		Input/output pin for external bus address data bus bit 11. This function is enabled when external bus is enabled.
	SOT3		Serial data output pin for UART3
36	P14	G	General purpose I/O port. The register can be set to select whether to use a pull-up resistor. This function is enabled in single-chip mode.
	AD12		Input/output pin for external bus address data bus bit 12. This function is enabled when external bus is enabled.
	SCK3		Clock input/output pin for UART3
37	P15	N	General purpose I/O port. The register can be set to select whether to use a pull-up resistor. This function is enabled in single-chip mode.
	AD13		Input/output pin for external bus address data bus bit 13. This function is enabled when external bus is enabled.
38	P16	G	General purpose I/O port. The register can be set to select whether to use a pull-up resistor. This function is enabled in single-chip mode.
	AD14		Input/output pin for external bus address data bus bit 14. This function is enabled when external bus is enabled.

# MB90350 Series

Pin No.	Pin name	Circuit type	Function
LQFP64*			
39	P17	G	General purpose I/O port. The register can be set to select whether to use a pull-up resistor. This function is enabled in single-chip mode.
	AD15		Input/output pin for external bus address data bus bit 15. This function is enabled when external bus is enabled.
40 to 43	P20 to P23	G	General purpose I/O ports. The register can be set to select whether to use a pull-up resistor. In external bus mode, the pins are enabled as a general-purpose I/O port when the corresponding bit in the external address output control register (HACR) is 1.
	A16 to A19		Output pins for A16 to A19 of the external address data bus. When the corresponding bit in the external address output control register (HACR) is 0, the pins are enabled as high address output pins A16 to A19.
	PPG9 (8) , PPGB (A) , PPGD (C) , PPGF (E)		Output pins for PPGs
44	P24	G	General purpose I/O port. The register can be set to select whether to use a pull-up resistor. In external bus mode, the pin is enabled as a general-purpose I/O port when the corresponding bit in the external address output control register (HACR) is 1.
	A20		Output pin for A20 of the external address data bus. When the corresponding bit in the external address output control register (HACR) is 0, the pin is enabled as high address output pin A20.
	IN0		Data sample input pin for input capture ICU0
51	P25	G	General purpose I/O port. The register can be set to select whether to use a pull-up resistor. In external bus mode, the pin is enabled as a general-purpose I/O port when the corresponding bit in the external address output control register (HACR) is 1.
	A21		Output pin for A21 of the external address data bus. When the corresponding bit in the external address output control register (HACR) is 0, the pin is enabled as high address output pin A21.
	IN1		Data sample input pin for input capture ICU1
	ADTG		Trigger input pin for A/D converter
52	P44	H	General purpose I/O port
	SDA0		Serial data I/O pin for I <sup>2</sup> C 0
	FRCK0		Input pin for the 16-bit I/O Timer 0
53	P45	H	General purpose I/O port
	SCL0		Serial clock I/O pin for I <sup>2</sup> C 0
	FRCK1		Input pin for the 16-bit I/O Timer 1

Pin No. LQFP64*	Pin name	Circuit type	Function
54	P30	G	General purpose I/O port. The register can be set to select whether to use a pull-up resistor. This function is enabled in single-chip mode.
	ALE		Address latch enable output pin. This function is enabled when external bus is enabled.
	IN4		Data sample input pin for input capture ICU4
55	P31	G	General purpose I/O port. The register can be set to select whether to use a pull-up resistor. This function is enabled in single-chip mode.
	$\overline{RD}$		Read strobe output pin for data bus. This function is enabled when external bus is enabled.
	IN5		Data sample input pin for input capture ICU5
56	P32	G	General purpose I/O port. The register can be set to select whether to use a pull-up resistor. This function is enabled either in single-chip mode or with the $\overline{WR/WRL}$ pin output disabled.
	$\overline{WR/WRL}$		Write strobe output pin for the data bus. This function is enabled when both the external bus and the $\overline{WR/WRL}$ pin output are enabled. $\overline{WRL}$ is used to write-strobe 8 lower bits of the data bus in 16-bit access. $\overline{WR}$ is used to write-strobe 8 bits of the data bus in 8-bit access.
	INT10R		External interrupt request input pin for INT10
57	P33	G	General purpose I/O port. The register can be set to select whether to use a pull-up resistor. This function is enabled either in single-chip mode, in external bus 8-bit mode or with the $\overline{WRH}$ pin output disabled.
	$\overline{WRH}$		Write strobe output pin for the 8 higher bits of the data bus. This function is enabled when the external bus is enabled, when the external bus 16-bit mode is selected, and when the $\overline{WRH}$ output pin is enabled.
58	P34	G	General purpose I/O port. The register can be set to select whether to use a pull-up resistor. This function is enabled either in single-chip mode or with the hold function disabled.
	HRQ		Hold request input pin. This function is enabled when both the external bus and the hold function are enabled.
	OUT4		Waveform output pin for output compare OCU4
59	P35	G	General purpose I/O port. The register can be set to select whether to use a pull-up resistor. This function is enabled either in single-chip mode or with the hold function disabled.
	$\overline{HAK}$		Hold acknowledge output pin. This function is enabled when both the external bus and the hold function are enabled.
	OUT5		Waveform output pin for output compare OCU5
60	P36	G	General purpose I/O port. The register can be set to select whether to use a pull-up resistor. This function is enabled either in single-chip mode or with the external ready function disabled.
	RDY		Ready input pin. This function is enabled when both the external bus and the external ready function are enabled.
	OUT6		Waveform output pin for output compare OCU6

(Continued)

(Continued)

Pin No. LQFP64*	Pin name	Circuit type	Function
61	P37	G	General purpose I/O port. The register can be set to select whether to use a pull-up resistor. This function is enabled either in single-chip mode or with the CLK output disabled.
	CLK		CLK output pin. This function is enabled when both the external bus and CLK output are enabled.
	OUT7		Waveform output pin for output compare OCU7
62, 63	P60, P61	I	General purpose I/O ports
	AN0, AN1		Analog input pins for A/D converter
64	AV <sub>cc</sub>	K	V <sub>cc</sub> power input pin for analog circuits
2	AVRH	L	Reference voltage input for the A/D converter. This power supply must be turned on or off while a voltage higher than or equal to AVRH is applied to AV <sub>cc</sub> .
1	AV <sub>ss</sub>	K	V <sub>ss</sub> power input pin for analog circuits
22, 23	MD1, MD0	C	Input pins for specifying the operating mode
21	MD2	D	Input pin for specifying the operating mode
49	V <sub>cc</sub>	—	Power (3.5 V to 5.5 V) input pin
18, 48	V <sub>ss</sub>	—	Power (0 V) input pins
50	C	K	This is the power supply stabilization capacitor pin. It should be connected to a higher than or equal to 0.1 μF ceramic capacitor.

An analog input is also connected to the input line.</p>	<ul style="list-style-type: none"> <li>• CMOS level output (<math>I_{OL} = 4 \text{ mA}</math>, <math>I_{OH} = -4 \text{ mA}</math>)</li> <li>• CMOS inputs (With the standby-time input shutdown function)</li> <li>• Automotive input (With the standby-time input shutdown function)</li> <li>• A/D analog input</li> </ul>

# MB90350 Series

## ■ HANDLING DEVICES

Special care is required for the following when handling the device :

- Preventing latch-up
- Treatment of unused pins
- Using external clock
- Precautions for when not using a sub clock signal
- Notes on during operation of PLL clock mode
- Power supply pins ( $V_{CC}/V_{SS}$ )
- Pull-up/down resistors
- Crystal Oscillator Circuit
- Turning-on Sequence of Power Supply to A/D Converter and Analog Inputs
- Connection of Unused Pins of A/D Converter
- Notes on Energization
- Stabilization of power supply voltage
- Initialization
- Port0 to port3 output during Power-on (External-bus mode)
- Notes on using CAN Function
- Flash security Function
- Correspondence with  $T_A = +105\text{ }^\circ\text{C}$  or more
- Low voltage/CPU operation detection reset circuit
- Internal CR oscillation circuit

### 1. Preventing latch-up

CMOS IC chips may suffer latch-up under the following conditions :

- A voltage higher than  $V_{CC}$  or lower than  $V_{SS}$  is applied to an input or output pin.
- A voltage higher than the rated voltage is applied between  $V_{CC}$  pin and  $V_{SS}$  pin.
- The  $AV_{CC}$  power supply is applied before the  $V_{CC}$  voltage.

Latch-up may increase the power supply current drastically, causing thermal damage to the device.

In using the devices, take sufficient care to avoid exceeding maximum ratings.

For the same reason, also be careful not to let the analog power-supply voltage ( $AV_{CC}$ ,  $AV_{RH}$ ) exceed the digital power-supply voltage.

### 2. Handling unused pins

Leaving unused input pins open may result in misbehavior or latch up and possible permanent damage of the device. Therefore they must be pulled up or pulled down through resistors. In this case those resistors should be more than  $2\text{ k}\Omega$  .

Unused I/O pins should be set to the output state and can be left open, or the input state with the above described connection.

### 3. Using external clock

To use external clock, drive the X0 pin and leave X1 pin open.

## 4. Precautions for when not using a sub clock signal

If you do not connect pins X0A and X1A to an oscillator, use pull-down handling on the X0A pin, and leave the X1A pin open.

## 5. Notes on during operation of PLL clock mode

If the PLL clock mode is selected, the microcontroller attempts to be working with the self-oscillating circuit even when there is no external oscillator or external clock input is stopped. Performance of this operation, however, cannot be guaranteed.

## 6. Power supply pins ( $V_{CC}/V_{SS}$ )

- If there are multiple  $V_{CC}$  and  $V_{SS}$  pins, from the point of view of device design, pins to be of the same potential are connected inside of the device to prevent such malfunctioning as latch up.

To reduce unnecessary radiation, prevent malfunctioning of the strobe signal due to the rise of ground level, and observe the standard for total output current, be sure to connect the  $V_{CC}$  and  $V_{SS}$  pins to the power supply and ground externally.

Connect  $V_{CC}$  and  $V_{SS}$  pins to the device from the current supply source at a low impedance.

- As a measure against power supply noise, connect a capacitor of about 0.1  $\mu\text{F}$  as a bypass capacitor between  $V_{CC}$  and  $V_{SS}$  pins in the vicinity of  $V_{CC}$  and  $V_{SS}$  pins of the device.

## 7. Pull-up/down resistors

The MB90350 series does not support internal pull-up/down resistors (Port 0 to Port 3: built-in pull-up resistors). Use external components where needed.

## 8. Crystal Oscillator Circuit

Noises around X0 or X1 pins may be possible causes of abnormal operations. Make sure to provide bypass capacitors via shortest distance from X0, X1 pins, crystal oscillator (or ceramic resonator) and ground lines, and make sure, to the utmost effort, that lines of oscillation circuit do not cross the lines of other circuits.

It is highly recommended to provide a printed circuit board artwork surrounding X0 and X1 pins with a ground area for stabilizing the operation.

Please ask the crystal maker to evaluate the oscillational characteristics of the crystal and this device.

# MB90350 Series

## 9. Turning-on Sequence of Power Supply to A/D Converter and Analog Inputs

Make sure to turn on the A/D converter power supply ( $AV_{CC}$ ,  $AVRH$ ) and analog inputs ( $AN0$  to  $AN14$ ) after turning-on the digital power supply ( $V_{CC}$ ).

Turn-off the digital power after turning off the A/D converter power supply and analog inputs. In this case, make sure that the voltage does not exceed  $AVRH$  or  $AV_{CC}$  (turning on/off the analog and digital power supplies simultaneously is acceptable).

## 10. Connection of Unused Pins of A/D Converter if A/D Converter is used

Connect unused pins of A/D converter to  $AV_{CC} = V_{CC}$ ,  $AV_{SS} = AVRH = V_{SS}$ .

## 11. Notes on Energization

To prevent the internal regulator circuit from malfunctioning, set the voltage rise time during energization at  $50 \mu s$  or more ( $0.2 V$  to  $2.7 V$ ).

## 12. Stabilization of power supply voltage

A sudden change in the power supply voltage may cause the device to malfunction even within the specified  $V_{CC}$  power supply voltage operating range. Therefore, the  $V_{CC}$  power supply voltage should be stabilized.

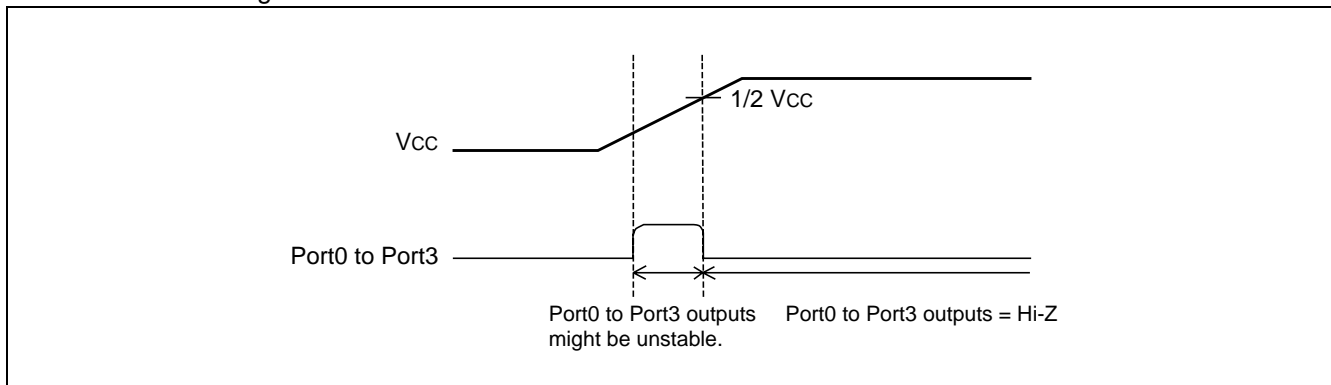

For reference, the power supply voltage should be controlled so that  $V_{CC}$  ripple variations (peak-to-peak value) at commercial frequencies ( $50 Hz$  to  $60 Hz$ ) fall below 10% of the standard  $V_{CC}$  power supply voltage and the coefficient of fluctuation does not exceed  $0.1 V/ms$  at instantaneous power switching.

## 13. Initialization

In the device, there are internal registers which are initialized only by a power-on reset. To initialize these registers, turn on the power again.

## 14. Port 0 to port 3 output during Power-on (External-bus mode)

As shown below, when power is turned on in external-bus mode, there is a possibility that output signal of Port 0 to Port 3 might be unstable.

## 15. Notes on using CAN Function

To use CAN function, please set "1" to DIRECT bit of CAN direct mode register (CDMR).

If DIRECT bit is set to "0" (initial value), wait states will be performed when accessing CAN registers.

Note : Please refer to section "22.15 CAN Direct Mode Register" in Hardware Manual of MB90350 series for detail of CAN direct mode register.

## 16. Flash security Function

The security byte is located in the area of the flash memory.

If protection code 01<sub>H</sub> is written in the security byte, the flash memory is in the protected state by security.

Therefore please do not write 01<sub>H</sub> in this address if you do not use the security function.

Please refer to following table for the address of the security byte.

	Flash memory size	Address for security bit
MB90F352(S) MB90F352A(S) MB90F352TA(S) MB90F357A(S) MB90F357TA(S)	Embedded 1 Mbit Flash Memory	FE0001 <sub>H</sub>

## 17. Correspondence with T<sub>A</sub> = +105 °C or more

If used exceeding T<sub>A</sub> = +105 °C, please contact Fujitsu sales representatives for reliability limitations.

## 18. Low voltage/CPU operation reset circuit

The low voltage detection reset circuit is a function that monitors power supply voltage in order to detect when a voltage drops below a given voltage level. When a low voltage condition is detected, an internal reset signal is generated.

The CPU operation detection reset circuit is a 20-bit counter that uses oscillation as a count clock and generates an internal reset signal if not cleared within a given time after startup.

### (1) Low voltage detection reset circuit

Detection voltage
4.0 V ± 0.3 V

When a low voltage condition is detected, the low voltage detection flag (LVRC : LVRF) is set to "1" and an internal reset signal is output.

Because the low voltage detection reset circuit continues to operate even in stop mode, detection of a low voltage condition generates an internal reset and releases stop mode.

During an internal RAM write cycle, low voltage reset is generated after the completion of writing. During the output of this internal reset, the reset output from the low voltage detection reset circuit is suppressed.

### (2) CPU operation detection reset circuit

The CPU operation detection reset circuit is a counter that prevents program runaway. The counter starts automatically after a power-on reset, and must be continually cleared within a given time. If the given time interval elapses and the counter has not been cleared, a cause such as infinite program looping is assumed and an internal reset signal is generated. The internal reset generated from the CPU operation detection circuit has a width of 5 machine cycles.

Interval time
$2^{20}/F_c$ (approx. 262 ms*)

\* : This value assumes the interval time at an oscillation clock frequency of 4 MHz.

During recovery from standby mode, the detection period is the maximum interval plus 20 μs.

# MB90350 Series

This circuit does not operate in modes where CPU operation is stopped.

The CPU operation detection reset circuit counter is cleared under any of the following conditions.

- “0” writing to CL bit of LVRC register
- Internal reset
- Main oscillation clock stop
- Transit to sleep mode
- Transit to timebase timer mode and watch mode

## 19. Internal CR oscillation circuit

Parameter	Symbol	Value			Unit
		Min	Typ	Max	
Oscillation frequency	$f_{RC}$	50	100	200	kHz
Oscillation stabilization wait time	tstab	—	—	100	$\mu$ s

## MEMORY MAP

Note : The high-order portion of bank 00 gives the image of the FF bank ROM to make the small model of the C compiler effective. Since the low-order 16 bits are the same, the table in ROM can be referenced without using the far specification in the pointer declaration.

For example, an attempt to access 00C000H accesses the value at FFC000H in ROM.

The ROM area in bank FF exceeds 32 Kbytes, and its entire image cannot be shown in bank 00.

The image between FF8000H and FFFFFFFH is visible in bank 00, while the image between FF0000H and FF7FFFH is visible only in bank FF.

7E00 <sub>H</sub> to 7FFF <sub>H</sub>	Reserved				

- Notes :
- Initial value of “X” represents unknown value.
  - Any write access to reserved addresses in I/O map should not be performed. A read access to reserved addresses results reading “X”.

## ■ CAN CONTROLLERS

The CAN controller has the following features :

- Conforms to CAN Specification Version 2.0 Part A and B
  - Supports transmission/reception in standard frame and extended frame formats
- Supports transmitting of data frames by receiving remote frames
- 16 transmitting/receiving message buffers
  - 29-bit ID and 8-byte data
  - Multi-level message buffer configuration
- Provides full-bit comparison, full-bit mask, acceptance register 0/acceptance register 1 for each message buffer as ID acceptance mask
  - Two acceptance mask registers in either standard frame format or extended frame formats
- Bit rate programmable from 10 Kbps to 2 Mbps (when input clock is at 16 MHz)

Y1 : Usable

Y2 : Usable, with EI<sup>2</sup>OS stop function

N : Unusable

- Notes :
- The peripheral resources sharing the ICR register have the same interrupt level.
  - When two peripheral resources share the ICR register, only one can use EI<sup>2</sup>OS at a time.
  - When either of the two peripheral resources sharing the ICR register specifies EI<sup>2</sup>OS, the other one cannot use interrupts.

## ■ ELECTRICAL CHARACTERISTICS

### 1. Absolute Maximum Ratings

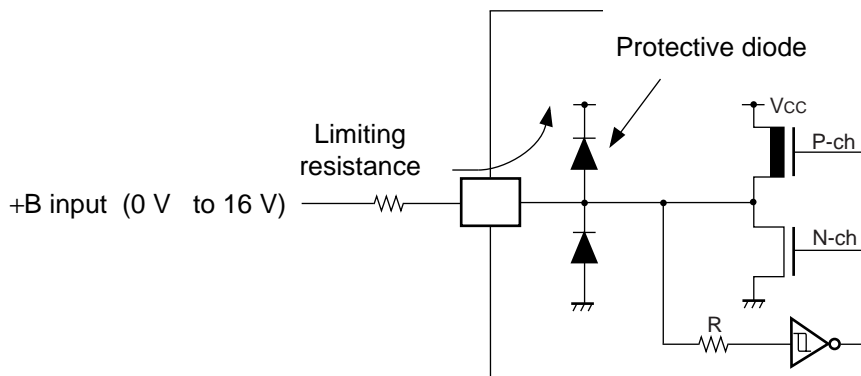

Parameter	Symbol	Rating		Unit	Remarks
		Min	Max		
Power supply voltage*1	$V_{CC}$	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	
	$AV_{CC}$	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	$V_{CC} = AV_{CC}$ *2
	$AVRH$	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	$AV_{CC} \geq AVRH$ *2
Input voltage*1	$V_I$	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	*3
Output voltage*1	$V_O$	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	*3
Maximum Clamp Current	$I_{CLAMP}$	-4.0	+4.0	mA	*5
Total Maximum Clamp Current	$\Sigma I_{CLAMP} $	—	40	mA	*5
"L" level maximum output current	$I_{OL}$	—	15	mA	*4
"L" level average output current	$I_{OLAV}$	—	4	mA	*4
"L" level maximum overall output current	$\Sigma I_{OL}$	—	100	mA	*4
"L" level average overall output current	$\Sigma I_{OLAV}$	—	50	mA	*4
"H" level maximum output current	$I_{OH}$	—	-15	mA	*4
"H" level average output current	$I_{OHAV}$	—	-4	mA	*4
"H" level maximum overall output current	$\Sigma I_{OH}$	—	-100	mA	*4
"H" level average overall output current	$\Sigma I_{OHAV}$	—	-50	mA	*4
Power consumption	$P_D$	—	240	mW	MB90F351(S), MB90F352(S) +105 °C < $T_A$ ≤ +125 °C, Normal operation : maximum frequency 16 MHz
		—	320	mW	MB90F351(S), MB90F352(S) -40 °C < $T_A$ ≤ +105 °C, Normal operation : maximum frequency 24 MHz
		—	320	mW	Device other than above
Operating temperature	$T_A$	-40	+105	°C	
		-40	+125	°C	*6
Storage temperature	$T_{STG}$	-55	+150	°C	

(Continued)

(Continued)

- \*1: This parameter is based on  $V_{SS} = AV_{SS} = 0\text{ V}$
- \*2: Set  $AV_{CC}$  and  $V_{CC}$  to the same voltage. Make sure that  $AV_{CC}$  does not exceed  $V_{CC}$  and that the voltage at the analog inputs does not exceed  $AV_{CC}$  when the power is switched on.
- \*3:  $V_I$  and  $V_O$  should not exceed  $V_{CC} + 0.3\text{ V}$ .  $V_I$  should not exceed the specified ratings. However if the maximum current to/from an input is limited by some means with external components, the  $I_{CLAMP}$  rating supersedes the  $V_I$  rating.
- \*4: Applicable to pins: P00 to P07, P10 to P17, P20 to P25, P30 to P37, P40 to P45, P50 to P56, P60 to P67
- \*5:
  - Applicable to pins: P00 to P07, P10 to P17, P20 to P25, P30 to P37, P40 to P45, P50 to P56 (for evaluation device : P50 to P55) , P60 to P67
  - Use within recommended operating conditions.
  - Use at DC voltage (current)
  - The +B signal should always be applied a limiting resistance placed between the +B signal and the microcontroller.
  - The value of the limiting resistance should be set so that when the +B signal is applied the input current to the microcontroller pin does not exceed rated values, either instantaneously or for prolonged periods.
  - Note that when the microcontroller drive current is low, such as in the power saving modes, the +B input potential may pass through the protective diode and increase the potential at the  $V_{CC}$  pin, and this may affect other devices.
  - Note that if a +B signal is input when the microcontroller power supply is off (not fixed at 0 V) , the power supply is provided from the pins, so that incomplete operation may result.
  - Note that if the +B input is applied during power-on, the power supply is provided from the pins and the resulting power supply voltage may not be sufficient to operate the power-on reset.
  - Care must be taken not to leave the +B input pin open.
  - Sample recommended circuits:

- Input/output equivalent circuits

\*6 : If used exceeding  $T_A = +105\text{ }^\circ\text{C}$ , be sure to contact Fujitsu for reliability limitations.

**WARNING:** Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of absolute maximum ratings. Do not exceed these ratings.

# MB90350 Series

## 2. Recommended Operating Conditions

(V<sub>SS</sub> = AV<sub>SS</sub> = 0 V)

Parameter	Symbol	Value			Unit	Remarks
		Min	Typ	Max		
Power supply voltage	V <sub>CC</sub> , AV <sub>CC</sub>	4.0	5.0	5.5	V	Under normal operation
		3.5	5.0	5.5	V	Under normal operation, when not using the A/D converter and not Flash programming.
		4.5	5.0	5.5	V	When External bus is used.
		3.0	—	5.5	V	Maintains RAM data in stop mode
Smooth capacitor	C <sub>S</sub>	0.1	—	1.0	μF	Use a ceramic capacitor or capacitor of better AC characteristics. Bypass capacitor at the V <sub>CC</sub> pin should be greater than this capacitor.
Operating temperature	T <sub>A</sub>	-40	—	+105	°C	MB90F352(S) f <sub>CP</sub> ≤ 24MHz
		-40	—	+125	°C	*, MB90F352(S) f <sub>CP</sub> ≤ 16MHz, Devices with A-suffix

\* : If used exceeding T<sub>A</sub> = +105 °C, be sure to contact Fujitsu for reliability limitations.

### • C Pin Connection Diagram

**WARNING:** The recommended operating conditions are required in order to ensure the normal operation of the semiconductor device. All of the device's electrical characteristics are warranted when the device is operated within these ranges.

Always use semiconductor devices within their recommended operating condition ranges. Operation outside these ranges may adversely affect reliability and could result in device failure.

No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their FUJITSU representatives beforehand.

• Clock Timing

# MB90350 Series

• PLL guaranteed operation range

**Guaranteed operation range of MB90350 series**

CS2(bit0 of PSCCR register) = 0

CS2(bit0 of PSCCR register) = 1

\*1 : Guaranteed 1 multiplied PLL operation range is 4.0 MHz to 20 MHz.

\*2 : When using crystal oscillator or ceramic oscillator, the maximum clock frequency is 16 MHz.

**External clock frequency and internal operation clock frequency**

## (2) Reset Standby Input

(MB90F352(S)/MB90F351(S):  $T_A = -40\text{ }^\circ\text{C}$  to  $+105\text{ }^\circ\text{C}$ ,  $V_{CC} = 5.0\text{ V} \pm 10\%$ ,  $f_{CP} \leq 24\text{ MHz}$ ,  $V_{SS} = AV_{SS} = 0\text{ V}$ )

(MB90F352(S)/MB90F351(S):  $T_A = -40\text{ }^\circ\text{C}$  to  $+125\text{ }^\circ\text{C}$ ,  $V_{CC} = 5.0\text{ V} \pm 10\%$ ,  $f_{CP} \leq 16\text{ MHz}$ ,  $V_{SS} = AV_{SS} = 0\text{ V}$ )

(Device other than above:  $T_A = -40\text{ }^\circ\text{C}$  to  $+125\text{ }^\circ\text{C}$ ,  $V_{CC} = 5.0\text{ V} \pm 10\%$ ,  $f_{CP} \leq 24\text{ MHz}$ ,  $V_{SS} = AV_{SS} = 0\text{ V}$ )

Parameter	Symbol	Pin	Value		Unit	Remarks	
			Min	Max			
Reset input time	$t_{RSTL}$	$\overline{RST}$	500	—	ns	Under normal operation	
			Oscillation time of oscillator* + 100 $\mu\text{s}$		—	$\mu\text{s}$	In Stop mode, Sub Clock mode, Sub Sleep mode and Watch mode
			100	—	$\mu\text{s}$	In Main timer mode and PLL timer mode	

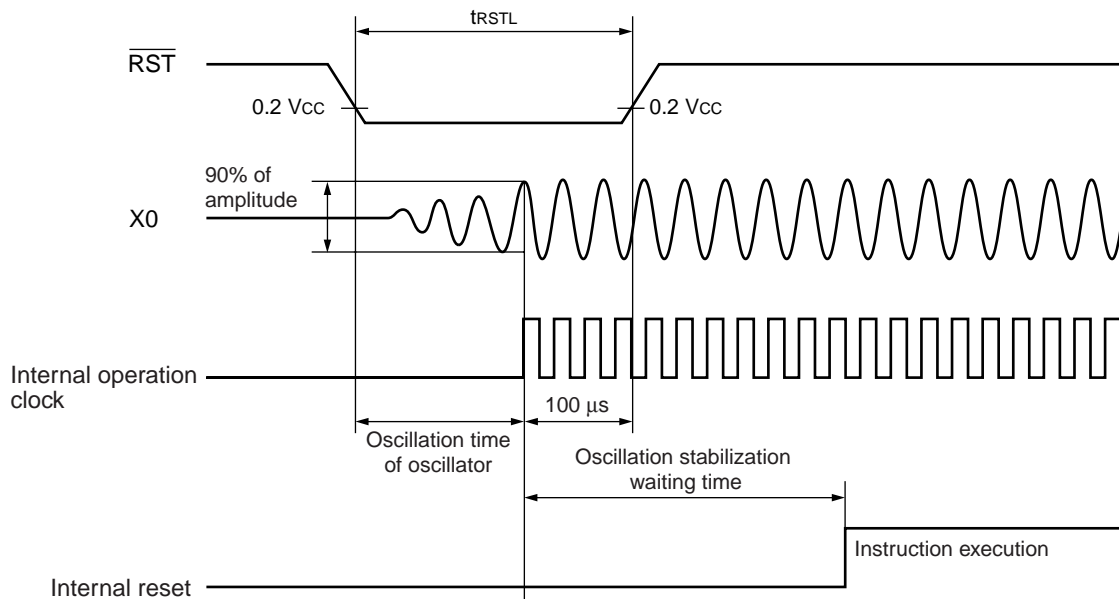

\* : Oscillation time of oscillator is the time that the amplitude reaches 90%.

In the crystal oscillator, the oscillation time is between several ms to tens of ms. In FAR / ceramic oscillators, the oscillation time is between hundreds of  $\mu\text{s}$  to several ms. With an external clock, the oscillation time is 0 ms.

Under normal operation:

In Stop mode, Sub Clock mode, Sub Sleep mode, Watch mode:

# MB90350 Series

## (3) Power On Reset

(MB90F352(S)/MB90F351(S):  $T_A = -40\text{ }^\circ\text{C}$  to  $+105\text{ }^\circ\text{C}$ ,  $V_{CC} = 5.0\text{ V} \pm 10\%$ ,  $f_{CP} \leq 24\text{ MHz}$ ,  $V_{SS} = AV_{SS} = 0\text{ V}$ )

(MB90F352(S)/MB90F351(S):  $T_A = -40\text{ }^\circ\text{C}$  to  $+125\text{ }^\circ\text{C}$ ,  $V_{CC} = 5.0\text{ V} \pm 10\%$ ,  $f_{CP} \leq 16\text{ MHz}$ ,  $V_{SS} = AV_{SS} = 0\text{ V}$ )

(Device other than above:  $T_A = -40\text{ }^\circ\text{C}$  to  $+125\text{ }^\circ\text{C}$ ,  $V_{CC} = 5.0\text{ V} \pm 10\%$ ,  $f_{CP} \leq 24\text{ MHz}$ ,  $V_{SS} = AV_{SS} = 0\text{ V}$ )

Parameter	Symbol	Pin	Condition	Value		Unit	Remarks
				Min	Max		
Power on rise time	$t_R$	$V_{CC}$	—	0.05	30	ms	
Power off time	$t_{OFF}$	$V_{CC}$	—	1	—	ms	Due to repetitive operation

If you change the power supply voltage too rapidly, a power on reset may occur. We recommend that you start up smoothly by restraining voltages when changing the power supply voltage during operation, as shown in the figure below. Perform while not using the PLL clock. However, if voltage drops are within 1 V/s, you can operate while using the PLL clock.

## (4) Clock Output Timing

( $T_A = -40\text{ }^\circ\text{C}$  to  $+105\text{ }^\circ\text{C}$ ,  $V_{CC} = 5.0\text{ V} \pm 10\%$ ,  $V_{SS} = 0.0\text{ V}$ ,  $f_{CP} \leq 24\text{ MHz}$ )

Parameter	Symbol	Pin	Condition	Value		Unit	Remarks

(MB90F352(S)/MB90F351(S):  $T_A = -40\text{ }^\circ\text{C}$  to  $+105\text{ }^\circ\text{C}$ ,  $V_{CC} = AV_{CC} = 5.0\text{ V} \pm 10\%$ ,  $f_{CP} \leq 24\text{ MHz}$ ,  $V_{SS} = AV_{SS} = 0\text{ V}$ )

(MB90F352(S)/MB90F351(S):  $T_A = -40\text{ }^\circ\text{C}$  to  $+125\text{ }^\circ\text{C}$ ,  $V_{CC} = AV_{CC} = 5.0\text{ V} \pm 10\%$ ,  $f_{CP} \leq 16\text{ MHz}$ ,  $V_{SS} = AV_{SS} = 0\text{ V}$ )

(Device other than above:  $T_A = -40\text{ }^\circ\text{C}$  to  $+125\text{ }^\circ\text{C}$ ,  $V_{CC} = AV_{CC} = 5.0\text{ V} \pm 10\%$ ,  $f_{CP} \leq 24\text{ MHz}$ ,  $V_{SS} = AV_{SS} = 0\text{ V}$ )

Parameter	Symbol	Condition	Standard-mode		Fast-mode*4		Unit
			Min	Max	Min	Max	
SCL clock frequency	$f_{SCL}$	R = 1.7 k $\Omega$ , C = 50 pF*1	0	100	0	400	kHz
Hold time for (repeated) START condition SDA $\downarrow$ →SCL $\downarrow$	$t_{HDSTA}$		4.0	—	0.6	—	$\mu\text{s}$
“L” width of the SCL clock	$t_{LOW}$		4.7	—	1.3	—	$\mu\text{s}$
“H” width of the SCL clock	$t_{HIGH}$		4.0	—	0.6	—	$\mu\text{s}$
Set-up time for a repeated START condition SCL $\uparrow$ →SDA $\downarrow$	$t_{SUSTA}$		4.7	—	0.6	—	$\mu\text{s}$
Data hold time SCL $\downarrow$ →SDA $\downarrow$ ↑	$t_{HDDAT}$		0	3.45*2	0	0.9*3	$\mu\text{s}$
Data set-up time SDA $\downarrow$ ↑→SCL $\uparrow$	$t_{SUDAT}$		250*5	—	100*5	—	ns
Set-up time for STOP condition SCL $\uparrow$ →SDA $\uparrow$	$t_{SUSTO}$		4.0	—	0.6	—	$\mu\text{s}$
Bus free time between STOP condition and START condition	$t_{BUS}$		4.7	—	1.3	—	$\mu\text{s}$

\*1 : R,C : Pull-up resistor and load capacitor of the SCL and SDA lines.

\*2 : The maximum  $t_{HDDAT}$  has only to be met if the device does not stretch the “L” width ( $t_{LOW}$ ) of the SCL signal.

\*3 : A Fast-mode I<sup>2</sup>C -bus device can be used in a Standard-mode I<sup>2</sup>C-bus system, but the requirement  $t_{SUDAT} \geq 250\text{ ns}$  must then be met.

\*4 : For use at over 100 kHz, set the machine clock to at least 6 MHz.

\*5 : Refer to “• Note of SDA, SCL set-up time”.

### • Note of SDA, SCL set-up time

# MB90350 Series

Note : The rating of the input data set-up time in the device connected to the bus cannot be satisfied depending on the load capacitance or pull-up resistor.  
Be sure to adjust the pull-up resistor of SDA and SCL if the rating of the input data set-up time cannot be satisfied.

## Notes on A/D Converter Section

### • About the external impedance of the analog input and its sampling time

A/D converter with sample and hold circuit. If the external impedance is too high to keep sufficient sampling time, the analog voltage charged to the internal sample and hold capacitor is insufficient, adversely affecting A/D conversion precision. Therefore to satisfy the A/D conversion precision standard, consider the relationship between the external impedance and minimum sampling time and either adjust the register value and operating frequency or decrease the external impedance so that the sampling time is longer than the minimum value. Also if the sampling time cannot be sufficient, connect a capacitor of about 0.1  $\mu\text{F}$  to the analog input pin.

- About the error

Values of relative errors grow larger, as  $|AV_{RH} - AV_{SS}|$  becomes smaller.

## 6. Definition of A/D Converter Terms

- Resolution : Analog variation that is recognized by an A/D converter.
- Non linearity error : Deviation between a line across zero-transition line ( "00 0000 0000" ← → "00 0000 0001" ) and full-scale transition line ( "11 1111 1110" ← → "11 1111 1111" ) and actual conversion characteristics.
- Differential linearity error : Deviation of input voltage, which is required for changing output code by 1 LSB, from an ideal value.
- Total error : Difference between an actual value and a theoretical value. A total error includes zero transition error, full-scale transition error, and linear error.

$$\text{Total error of digital output "N"} = \frac{V_{NT} - \{1 \text{ LSB} \times (N - 1) + 0.5 \text{ LSB}\}}{1 \text{ LSB}} \text{ [LSB]}$$

$$1 \text{ LSB} = (\text{Ideal value}) \frac{AVRH - AVSS}{1024} \text{ [V]}$$

N : A/D converter digital output value

$$V_{OT} (\text{Ideal value}) = AVSS + 0.5 \text{ LSB [V]}$$

$$V_{FST} (\text{Ideal value}) = AVRH - 1.5 \text{ LSB [V]}$$

V<sub>NT</sub> : A voltage at which digital output transits from (N - 1) to N.

(Continued)

(Continued)

$$\text{Non linearity error of digital output } N = \frac{V_{NT} - \{1 \text{ LSB} \times (N - 1) + V_{OT}\}}{1 \text{ LSB}} \text{ [LSB]}$$

$$\text{Differential linearity error of digital output } N = \frac{V_{(N+1)T} - V_{NT}}{1 \text{ LSB}} - 1 \text{ LSB [LSB]}$$

$$1 \text{ LSB} = \frac{V_{FST} - V_{OT}}{1022} \text{ [V]}$$

N : A/D converter digital output value

$V_{OT}$  : Voltage at which digital output transits from "000H" to "001H."

$V_{FST}$  : Voltage at which digital output transits from "3FEH" to "3FFH."

The contents of this document are subject to change without notice. Customers are advised to consult with FUJITSU sales representatives before ordering.

The information, such as descriptions of function and application circuit examples, in this document are presented solely for the purpose of reference to show examples of operations and uses of Fujitsu semiconductor device; Fujitsu does not warrant proper operation of the device with respect to use based on such information. When you develop equipment incorporating the device based on such information, you must assume any responsibility arising out of such use of the information. Fujitsu assumes no liability for any damages whatsoever arising out of the use of the information.

Any information in this document, including descriptions of function and schematic diagrams, shall not be construed as license of the use or exercise of any intellectual property right, such as patent right or copyright, or any other right of Fujitsu or any third party or does Fujitsu warrant non-infringement of any third-party's intellectual property right or other right by using such information. Fujitsu assumes no liability for any infringement of the intellectual property rights or other rights of third parties which would result from the use of information contained herein.

The products described in this document are designed, developed and manufactured as contemplated for general use, including without limitation, ordinary industrial use, general office use, personal use, and household use, but are not designed, developed and manufactured as contemplated (1) for use accompanying fatal risks or dangers that, unless extremely high safety is secured, could have a serious effect to the public, and could lead directly to death, personal injury, severe physical damage or other loss (i.e., nuclear reaction control in nuclear facility, aircraft flight control, air traffic control, mass transport control, medical life support system, missile launch control in weapon system), or (2) for use requiring extremely high reliability (i.e., submersible repeater and artificial satellite).

Please note that Fujitsu will not be liable against you and/or any third party for any claims or damages arising in connection with above-mentioned uses of the products.

Any semiconductor devices have an inherent chance of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

If any products described in this document represent goods or technologies subject to certain restrictions on export under the Foreign Exchange and Foreign Trade Law of Japan, the prior authorization by Japanese government will be required for export of those products from Japan.
