## General Description

The MIC809 and MIC810 are inexpensive microprocessor supervisory circuits that monitor power supplies in microprocessor-based systems.

The function of these devices is to assert a reset if the power supply drops below a designated reset threshold level. Several different reset threshold levels are available to accommodate 3V, 3.3V or 5V powered systems.

The MIC809 has an active-low /RESET output, while the MIC810 offers an active-high RESET output. The reset output is guaranteed to remain asserted for a minimum of 140ms after  $V_{CC}$  has risen above the designated reset threshold level. Having a push-pull output stage, the MIC809/810 does not require a pull-up resistor at the output. The MIC809/810 comes in a 3-pin SOT-23 and SC-70 package.

The MIC809 is also available with a shorter reset timeout (30ms, minimum).

Datasheets and support documentation are available on Micrel's web site at: [www.micrel.com](http://www.micrel.com).

## Features

- Precision voltage monitor for 3V, 3.3V, or 5V power supplies
- /RESET remains valid with  $V_{CC}$  as low as 1.4V for SOT-23 packaged part
- /RESET remains valid with  $V_{CC}$  as low as 1V for SC70-packaged part
- Typically less than 15 $\mu$ A supply current for SOT-23 packaged part
- 5 $\mu$ A (typical) supply current for SC70-packaged part
- 140ms (minimum) reset pulse widths available
- Available in 3-pin SOT-23 and SC-70 package

## Applications

- Portable equipment
- Intelligent instruments
- Critical microprocessor power monitoring
- Printers/computers
- Controllers

### Pin Description

Pin Number MIC809	Pin Number MIC810	Pin Name	Pin Name
1	1	GND	IC Ground Pin.
2	N/A	/RESET	/RESET goes low if $V_{CC}$ falls below the reset threshold and remains asserted for one reset timeout period (140ms min.) after $V_{CC}$ exceeds the reset threshold.
N/A	2	RESET	RESET goes high if $V_{CC}$ falls below the reset threshold and remains asserted for one reset timeout period (140ms, minimum) after $V_{CC}$ exceeds the reset threshold.
3	3	VCC	Power Supply Input.

### Part Numbering Conventions

**MIC809 SOT-23**

**MIC809 SC-70**

**Absolute Maximum Ratings<sup>(3)</sup>**

Terminal Voltage ( $V_{CC}$ ).....	-0.3V to +6.0V
Input Current ( $V_{CC}$ ).....	20mA
Output Current (/RESET, RESET).....	20mA
Lead Temperature (soldering, 10s).....	300°C
Storage Temperature ( $T_S$ ).....	-65°C to 150°C
Rate-of-Rise ( $V_{CC}$ ).....	100V/ $\mu$ s
ESD Rating <sup>(5)</sup> .....	3kV (SC-70)

**Operating Ratings<sup>(4)</sup>**

Operating Temperature Range	
MIC809 .....	-40°C to +85°C
MIC810 .....	-40°C to +85°C
Power Dissipation ( $T_A = +70^\circ\text{C}$ ).....	320mW

**Electrical Characteristics<sup>(6)</sup>**

For typical values,  $V_{CC} = 5\text{V}$  for MIC8\_L/M/J,  $V_{CC} = 3.3\text{V}$  for MIC8\_S/T,  $V_{CC} = 3\text{V}$  for MIC8\_R;  $T_A = 25^\circ\text{C}$ .

**Bold** values indicate  $-40^\circ\text{C}$  to  $\leq T_A \leq +85^\circ\text{C}$ ; unless otherwise noted.

Symbol	Parameter	Condition	Min.	Typ.	Max.	Units
$V_{CC}$	Operating Voltage Range	$T_A = 0^\circ\text{C}$ to $70^\circ\text{C}$ (SOT-23)	<b>1.4</b>		<b>5.5</b>	V
		$T_A = -40^\circ\text{C}$ to $85^\circ\text{C}$ (SOT-23)	<b>1.6</b>		<b>5.5</b>	V

		MIC809R, MIC810R	<b>2.55</b>	2.63	<b>2.70</b>	
$t_{RST}$	Reset Timeout Period		<b>140</b>	240	<b>560</b>	ms
$V_{OH}$	/RESET Output Voltage (MIC809)	$I_{SOURCE} = 800\mu\text{A}$ , MIC809L/M/J	<b><math>V_{CC} - 1.5\text{V}</math></b>			V
		$I_{SOURCE} = 500\mu\text{A}$ , MIC809R/S/T	<b><math>0.8 \times V_{CC}</math></b>			

**Notes:**

- Exceeding the absolute maximum ratings may damage the device.
- The device is not guaranteed to function outside its operating ratings.
- Devices are ESD sensitive. Handling precautions are recommended. Human body model, 1.5k $\Omega$  in series with 100pF.
- Specification for packaged product only.

## Electrical Characteristics<sup>(6)</sup> (Continued)

For typical values,  $V_{CC} = 5V$  for MIC8\_L/M/J,  $V_{CC} = 3.3V$  for MIC8\_S/T,  $V_{CC} = 3V$  for MIC8\_R;  $T_A = 25^\circ C$ .

**Bold** values indicate  $-40^\circ C$  to  $\leq T_A \leq +85^\circ C$ ; unless otherwise noted.

		$V_{CC} > 1.4V$ , $I_{SINK} = 50\mu A$ , $T_A = 0^\circ C$ to $+70^\circ C$			<b>0.3</b>	
		$V_{CC} = 1V$ , $I_{SINK} = 50\mu A$ , $T_A = -40^\circ C$ to $+85^\circ C$ (SC-70)			<b>0.3</b>	
		$V_{CC} > 1.6V$ , $I_{SINK} = 50\mu A$ , $T_A = -40^\circ C$ to $+85^\circ C$			<b>0.3</b>	
$V_{OH}$	RESET Output Voltage (MIC810)	$1.8V < V_{CC} < V_{TH}$ (minimum), $I_{SOURCE} = 150\mu A$	<b><math>0.8 \times V_{CC}</math></b>			V
$V_{OL}$	RESET Output Voltage (MIC810)	$I_{SINK} = 3.2mA$ , MIC810L/M/J			<b>0.4</b>	V
		$I_{SINK} = 1.2mA$ , MIC810R/S/T			<b>0.3</b>	

## Timing Diagram

Reset Timing Diagram

### Functional Diagram

## Application Information

### Microprocessor Reset

The /RESET (or RESET) pin is asserted whenever  $V_{CC}$  falls below the reset threshold voltage. The /RESET pin remains asserted for a period of 140ms after  $V_{CC}$  has risen above the reset threshold voltage. The reset function ensures the microprocessor is properly reset and powers up in a known condition after a power failure. /RESET will remain valid with  $V_{CC}$  as low as 1.4V (1V for SC-70 package).

### $V_{CC}$ Transients

The MIC809/810 are relatively immune to negative-going  $V_{CC}$  glitches below the reset threshold. Typically, a negative-going transient 125mV below the reset threshold with duration of 2 $\mu$ s or less (SC70 package) will not cause a reset.

### Interfacing to Bidirectional Reset Pins

The MIC809/810 can interface with  $\mu$ Ps with bidirectional reset pins by connecting a 4.7k $\Omega$  resistor in series with the MIC809/810 output and the  $\mu$ P reset pin.

### /RESET Valid at Low Voltage

A resistor can be added from the /RESET pin to ground to ensure the /RESET output remains low with  $V_{CC}$  down to 0V. A 100k $\Omega$  resistor connected from the /RESET to ground is recommended. The resistor should be small enough to pull-down any stray leakage currents and large enough not to load the reset output (Figure 1).

Figure 1. Reset Valid to  $V_{CC} = 0V$

Micrel, Inc. is a leading global manufacturer of IC solutions for the worldwide high performance linear and power, LAN, and timing & communications markets. The Company's products include advanced mixed-signal, analog & power semiconductors; high-performance communication, clock management, MEMs-based clock oscillators & crystal-less clock generators, Ethernet switches, and physical layer transceiver ICs. Company customers include leading manufacturers of enterprise, consumer, industrial, mobile, telecommunications, automotive, and computer products. Corporation headquarters and state-of-the-art wafer fabrication facilities are located in San Jose, CA, with regional sales and support offices and advanced technology design centers situated throughout the Americas, Europe, and Asia. Additionally, the Company maintains an extensive network of distributors and reps worldwide.
