

**THE DATASHEET OF
SC1563ISK1.8TRT**

POWER MANAGEMENT

Description

The SC1563 is a high performance positive voltage regulator designed for use in applications requiring very low dropout voltage at up to 500mA. Since it has superior dropout characteristics compared to regular LDOs, it can be used to supply 2.5V on motherboards or 2.8V on peripheral cards from the 3.3V supply with no heatsink. Additionally, the SC1563 has a shutdown pin to further reduce power dissipation while shut down. The SC1563 provides excellent regulation over variations in line, load and temperature.

A wide range of fixed output voltage options are available. In addition, the output voltage of every device can be adjusted between 1.2V and 4.8V using external resistors. The SC1563 comes in the space saving 5-pin SOT-23 package.

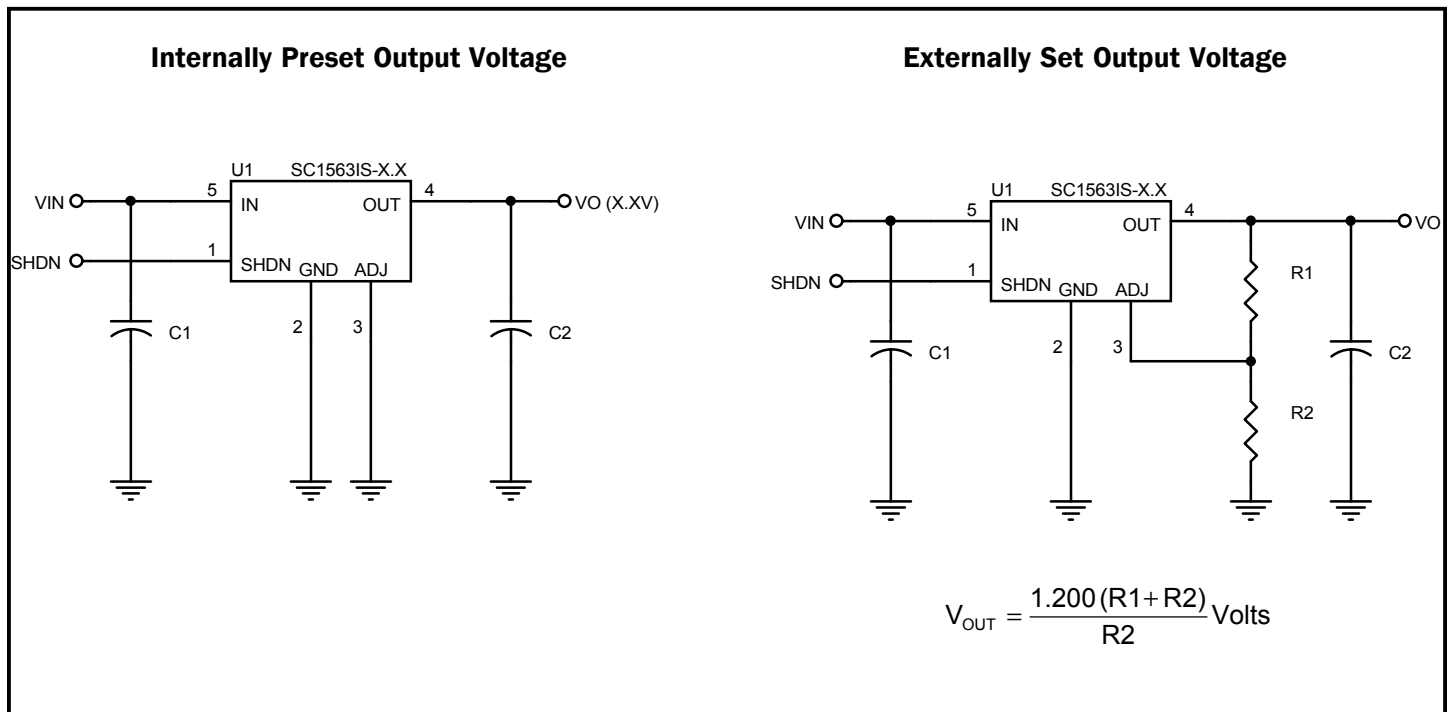

Features

- ◆ 350mV dropout @ 500mA
- ◆ Designed to operate with ceramic capacitors
- ◆ Adjustable output from 1.2V to 4.8V
- ◆ Multiple output voltage options (all parts also adjustable externally using resistors)
- ◆ Over current and over temperature protection
- ◆ 2µA quiescent current in shutdown
- ◆ No minimum load current requirement
- ◆ Low reverse leakage (output to input)
- ◆ Full industrial temperature range
- ◆ 5-pin SOT-23 surface mount package. Also available in Lead-free, fully WEEE and RoHS compliant

Applications

- ◆ Personal Digital Assistants
- ◆ Battery powered systems
- ◆ Motherboards
- ◆ Peripheral cards
- ◆ PCMCIA cards

Typical Application Circuits

POWER MANAGEMENT
Absolute Maximum Ratings

Exceeding the specifications below may result in permanent damage to the device, or device malfunction. Operation outside of the parameters specified in the Electrical Characteristics section is not implied.

Parameter	Symbol	Maximum	Units
Input Voltage	V_{IN}	-0.3 to 7	V
Shutdown Voltage	V_{SHDN}	-0.3 to V_{IN}	V
Power Dissipation	P_D	Internally Limited	W
Thermal Resistance Junction to Ambient ⁽¹⁾	θ_{JA}	175	°C/W
Operating Ambient Temperature Range	T_A	-40 to 85	°C
Operating Junction Temperature Range	T_J	-40 to 150	°C
Storage Temperature Range	T_{STG}	-65 to 150	°C
Lead Temperature (Soldering) 10 sec	T_{LEAD}	300	°C
ESD Rating	V_{ESD}	2	kV

Note:

(1) Minimum pad size.

Electrical Characteristics

Unless specified: $V_{SHDN} = 0V$, Adjustable mode ($V_{ADJ} > V_{TH(ADJ)}$): $V_{IN} = 2.2V$ to $5.5V$ and $I_{OUT} = 0A$ to $500mA$, Fixed mode ($V_{ADJ} = GND$): $V_{IN} = (V_{OUT} + 0.7V)$ to $5.5V$ and $I_{OUT} = 0A$ to $500mA$. Values in **bold** apply over full operating temperature range.

Parameter	Symbol	Conditions	Min	Typ	Max	Units
IN						
Supply Voltage Range	V_{IN}		2.2		6.5	V
Quiescent Current	I_Q	$V_{IN} = 3.3V$		85	150	μA
		$V_{IN} = 6.5V, V_{SHDN} = \text{Open}$		0.01	2.00	μA
OUT						
Output Voltage ⁽¹⁾ (Internal Fixed Voltage)	V_{OUT}	$V_{IN} = V_{OUT} + 0.7V, I_{OUT} = 10mA$	-1%	V_{OUT}	+1%	V
			-2%		+2%	
Line Regulation ⁽¹⁾	$REG_{(LINE)}$	$V_{IN} = (V_{OUT} + 0.25V)$ to $5.5V, I_{OUT} = 10mA$		0.1	0.4	%
Load Regulation ⁽¹⁾	$REG_{(LOAD)}$	$V_{IN} = V_{OUT} + 0.7V$		0.15	0.40	%

POWER MANAGEMENT
Electrical Characteristics

Unless specified: $V_{SHDN} = 0V$, Adjustable mode ($V_{ADJ} > V_{TH(ADJ)}$): $V_{IN} = 2.2V$ to $5.5V$ and $I_{OUT} = 0A$ to $500mA$,
 Fixed mode ($V_{ADJ} = GND$): $V_{IN} = (V_{OUT} + 0.7V)$ to $5.5V$ and $I_{OUT} = 0A$ to $500mA$. Values in **bold** apply over full operating temperature range.

Parameter	Symbol	Conditions	Min	Typ	Max	Units
OUT (Cont.)						
Dropout Voltage ⁽¹⁾⁽²⁾	V_D	$I_{OUT} = 2mA$		1	5	mV
					10	
		$I_{OUT} = 100mA$		70	100	mV
					150	
$I_{OUT} = 250mA$		175	250	mV		
			350			
$I_{OUT} = 500mA$		350	500	mV		
			700			
Current Limit	I_{LIM}		0.5		1.0	A
ADJ						
Reference Voltage ⁽¹⁾	V_{REF}	$V_{IN} = 2.2V, V_{ADJ} = V_{OUT}, I_{OUT} = 10mA$	1.188	1.200	1.212	V
			1.176		1.224	
Adjust Pin Current ⁽³⁾	I_{ADJ}	$V_{ADJ} = V_{REF}$		65	150	nA
Adjust Pin Threshold ⁽⁴⁾	$V_{TH(ADJ)}$		0.10	0.25	0.40	V
SHDN						
Shutdown Pin Current	I_{SHDN}	$V_{SHDN} = 0V, V_{IN} = 3.3V$		1.5	5.0	μA
Shutdown Pin Threshold	V_{IH}	$V_{IN} = 3.3V$	1.8			V
	V_{IL}	$V_{IN} = 3.3V$			0.4	
Over Temperature Protection						
High Trip Level	T_{HI}			170		$^{\circ}C$
Hysteresis	T_{HYST}			10		$^{\circ}C$

Notes:

- (1) Low duty cycle pulse testing with Kelvin connections required.
- (2) Defined as the input to output differential at which the output voltage drops to 1% below the value measured at a differential of 0.7V for $2.5V \leq V_{OUT} \leq 3.4V$. Not measurable on outputs less than 2.2V due to minimum V_{IN} constraints. See typical characteristics curves.
- (3) Guaranteed by design.
- (4) When V_{ADJ} exceeds this threshold, the "Sense Select" switch disconnects the internal feedback chain from the error amplifier and connects V_{ADJ} instead.

Pin Configurations

Ordering Information

Part Number ⁽¹⁾⁽²⁾⁽³⁾	Package
SC1563ISK-X.XTR	SOT-23-5
SC1563ISK-X.XTRT ⁽⁴⁾	

Notes:

- (1) Where -X.X denotes voltage options. Available voltages are: 1.8V, 2.5V, 2.8V, 3.0V, 3.1V and 3.3V.
- (2) Output voltage can be adjusted using external resistors, see Pin Descriptions.
- (3) Only available in tape and reel packaging. A reel contains 3000 devices.
- (4) Lead free product. This product is fully WEEE and RoHS compliant.

Marking Information

POWER MANAGEMENT
Block Diagram

Pin Descriptions

Pin #	Pin Name	Pin Function
1	SHDN	Shutdown Input. Leaving this pin open turns the regulator off, reducing the quiescent current to a fraction of its operating value (typically < 300nA). The device will be enabled if this pin is pulled below 0.4V. Connect to GND if not being used.
2	GND	Reference ground. This pin may be used for heatsinking purposes.
3	ADJ	This pin, when grounded, sets the output voltage to that set by the internal feedback resistors. If external feedback resistors are used, the output voltage will be (See Application Circuit on page 1): $V_{OUT} = \frac{1.200(R1+R2)}{R2} \text{ Volts}$
4	OUT	This pin is the power output of this device, sourcing up to 500mA.
5	IN	Input voltage. For regulation at full load, the input to this pin must be between ($V_{OUT} + 0.7V$) and 6.5V. Minimum $V_{IN} = 2.2V$.

POWER MANAGEMENT
Applications Information
Introduction

The SC1563 is intended for applications such as graphics cards where high current capability and very low dropout voltage are required. It provides a very simple, low cost solution that uses little pcb real estate. Additional features include a shutdown pin to allow for a very low power consumption standby mode, and a fully adjustable output.

Component Selection

Input capacitor - a 1 μ F ceramic capacitor is recommended. This allows for the device being some distance from any bulk capacitance on the rail. Additionally, input droop due to load transients is reduced, improving load transient response. Additional capacitance may be added if required by the application.

Output capacitor - a minimum bulk capacitance of 1 μ F, along with a 0.1 μ F ceramic decoupling capacitor is recommended. Increasing the bulk capacitance will improve the overall transient response. The use of multiple lower value ceramic capacitors in parallel to achieve the desired bulk capacitance will not cause stability issues. Although designed for use with ceramic output capacitors, the SC1563 is extremely tolerant of output capacitor ESR values and thus will also work comfortably with tantalum output capacitors.

Noise immunity - in very electrically noisy environments, it is recommended that 0.1 μ F ceramic capacitors be placed from IN to GND and OUT to GND as close to the device pins as possible.

External voltage selection resistors - the use of 1% resistors, and designing for a current flow $\geq 10\mu$ A is recommended to ensure a well regulated output (thus $R2 \leq 120k\Omega$).

Thermal Considerations

The power dissipation in the SC1563 is approximately equal to the product of the output current and the input to output voltage differential:

$$P_D \approx (V_{IN} - V_{OUT}) \cdot I_{OUT}$$

The absolute worst-case dissipation is given by:

$$P_{D(MAX)} = (V_{IN(MAX)} - V_{OUT(MIN)}) \cdot I_{OUT(MAX)} + V_{IN(MAX)} \cdot I_{Q(MAX)}$$

For a typical scenario, $V_{IN} = 3.3V \pm 5\%$, $V_{OUT} = 2.5V$ and $I_{OUT} = 500mA$, therefore:

$$\begin{aligned} V_{IN(MAX)} &= 3.465V, \\ V_{OUT(MIN)} &= 2.450V \text{ and} \\ I_{Q(MAX)} &= 150\mu A, \end{aligned}$$

$$\text{Thus } P_{D(MAX)} = 0.508W.$$

Using this figure, and assuming $T_{A(MAX)} = 70^\circ C$, we can calculate the maximum thermal impedance allowable to maintain $T_J \leq 150^\circ C$:

$$R_{TH(J-A)(MAX)} = \frac{(T_{J(MAX)} - T_{A(MAX)})}{P_{D(MAX)}} = \frac{(150 - 70)}{0.508} = 157^\circ C/W$$

This should be achievable with the SOT-23-5 package using pcb copper area to aid in conducting the heat away from the device. Internal ground/power planes and air flow will also assist in removing heat.
