Connected Sensors Building Automation Systems Guide
Table of Contents and Sensor Solutions

Introduction

Monitoring devices or nodes in building control systems, fire safety systems, lighting control, and other building automation and Internet of Things (IoT) applications are becoming more prevalent in today's world.

The use of connected sensors has a wide range of uses in building automation applications, from monitoring human safety and security, controlling the environment and ambience specified by the comfort preferences of the end user, or either periodic or continuous data logging of environmental and system data to detect irregular system conditions.

Texas Instruments (TI) has a broad portfolio of products that cater to connected sensing in building automation applications. This portfolio ranges from innovative sensor analog front-end products to low-power wireless connectivity solutions.

Table of Contents

Sensor Solutions
2 Temperature Sensing
2 Humidity and Temperature Sensing
2 Ambient Light Sensing
3 Inductance Sensing
3 Capacitance Sensing
3 Hall Effect Sensor

Amplifiers and Comparators
4 Low Power Amplifiers
4 General Purpose Amplifiers
4 Comparators
4 Analog-to-Digital Converters

Wireless Connectivity
5 Wi-Fi
5 Sub-1GHz
5 Bluetooth®
5 ZigBee®
5 NFC

Embedded Processing Solutions
7 MSP430 Low Power FRAM MCUs
7 MSP430 Low Power MCUs
7 ARM Based MCUs and MPUs

Power Management
8 DC/DC Switching Regulators
8 Linear Regulators
8 Voltage Reference
9 AC/DC Converters
9 Ultra Low Power Harvester Power Management IC
9 System Timer
9 Load Switches

Haptic Drivers
10 Piezo Drivers
10 Haptic Drivers

Interface and Protection
11 Integrated ESD Protection
11 High Performance TVs Diodes
11 Peripheral Drivers
11 RS-485
11 eFuses

Sensor Solutions

TI has a rich, five-decade history of sensing innovation and, combined with best-in-class sensing technologies, tools, and resources, we continue to deliver better solutions today and new possibilities for tomorrow.

Temperature Sensing

Part No.	Type	Local Sensor Accuracy (Max) At Given Temp Range (±°C)	Supply Current (Max) (µA)	Supply Range (V)	Interface	Infrared Sensor Accuracy (Max) (±°C)	Operating Temp. (°C)	Pin / Package	Approx. Price (US$ I 1ku)
LMT70/70A	Analog	±0.2°C from 20 to 90	12	2.0 to 5.5	Analog Out	–	–55 to 150	4DSBGA	0.54 / 0.65
LMT84	Analog	±2.7°C from –50 to 150	8.1	1.5 to 5.5	Analog Out	–	–50 to 150	5SC70	0.18
TMP112	Digital	±0.5°C from 0 to 65	10	1.4 to 3.6	I²C, SMBus, 2-wire	–	–40 to 125	6SOT	0.90
TMP75	Digital	±2°C from –25 to 85	85	2.7 to 5.5	I²C, SMBus, 2-wire	–	–40 to 125	8SOIC, 8VSSOP	0.45
TMP007	Contactless	±1°C from –40 to 125	350	2.2 to 5.5	I²C, SMBus	3	–40 to 125	8DSBGA	1.90

Humidity and Temperature Sensing

Part No.	Relative Humidity Accuracy (Typ) (%RH)	RH Operating Range (Typ) (%RH)	Temperature Accuracy (Typ) (°C)	Supply Range (V)	Average Supply Current (Typ) (µA)	Interface	Operating Temp. (°C)	Pin / Package	Approx. Price (US$ I 1ku)
HDC1000/1050	±3	0 - 100	±0.2	3 to 5	1.2 @ 1 sps	I²C	–40 to 125	8DSBGA, 6DFN	2.20
HDC1008	±4	0 - 100	±0.2	3 to 5	1.2 @ 1 sps	I²C	–40 to 125	8DSBGA	1.76

**Quantities of 1,000 begin at this suggested resale price in U.S. dollars.*

*Preview products are listed in **bold teal.***

Sensor Solutions

Ambient Light Sensing

Part No.	Supply Range (Nom) (V)	Iq (Max) (µA)	Lux Range (Nom)	Dark Response @ 0 Lux (Max)	Gain Selection	Interface	Benefits	Operating Temp. (°C)	Pin / Package	Approx. Price (US$ I 1ku)
OPT3001	1.6 to 3.6	2	0.01 to 83K	1 Code	11 Gains with Auto-ranging	I²C	Matches photopic response of the human eye Rejects > 99% (Typ) of IR	–40 to 85	USON	0.99

Inductance Sensing

Part No.	Key Applications	Special Features	Input Channels	L (Inductance) Resolution (Bits)	Supply Range	Active State Current (mA)	Interface	Sensor Frequency (Hz)	Operating Temp. (°C)	Pin / Package	Approx. Price (US$ I 1ku)
LDC1312/4	• Position Sensing • Angle/Rotation sensing	• Contactless sensing • Ultralow cost sensors (coils, PCB coils) • Immune to dust, dirt etc.	2 / 4	12	2.7 to 3.6	2.1	I²C	1k to 10M	–40 to 125	WSON, WQFN	2.38 / 3.50
LDC1612/4	• Position Sensing • Angle/Rotation sensing	• Contactless sensing • Ultralow cost sensors (coils, PCB coils) • Immune to dust, dirt etc.	2 / 4	28	2.7 to 3.6	2.1	I²C	1k to 10M	–40 to 125	WSON, WQFN	3.25 / 4.75

Capacitance Sensing

Part No.	Input Channels	Special Features	Shield Drive Channels	Special Features	Supply Range	Supply Current (mA)	Interface	Prog. Sampling Rate (Typ) (SPS)	Operating Temp. (°C)	Pin / Package	Approx. Price (US$ I 1ku)
FDC1004	4	• Liquid level sensing (with interferers)	2	Integrated Shield Drivers	3 to 3.6	0.75	I²C	100 / 200 / 400	–40 to 125	WSON	2.50
FDC2114/12	4 / 2	• Proximity Sensing • Liquid Level Sensing	–	EMI resistant core	2.7 to 3.6	2.1	I²C	40 to 4080	–40 to 125	WQFN	2.38 / 3.50
FDC2214/12	4 / 2	• Proximity Sensing • Liquid Level Sensing	–	EMI resistant core	2.7 to 3.6	2.1	I²C	40 to 13300	–40 to 125	WQFN	3.25 / 4.75

Hall Effect Sensor

Part No.	Type	Type	Supply Range	Output	Output Bandwidth (Typ) (kHz)	Operating Temp. (°C)	Pin / Package	Approx. Price (US$ I 1ku)
DRV5013/23/33	Digital	Latch / Switch / Omnipolar Switch	2.5 to 38	Open Drain	–	–40 to 125	SOT-23, TO-92	0.29
DRV5053	Analog	Analog Bipolar	2.5 to 38	0.2 to 1.8 V	10	–40 to 125	SOT-23, TO-92	0.31

**Quantities of 1,000 begin at this suggested resale price in U.S. dollars.*

*New products are listed in **bold red.***

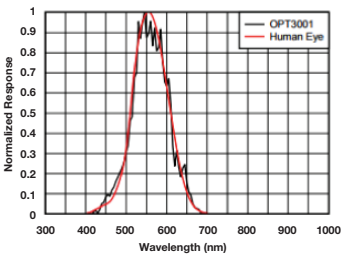
Find the Perfect Sensor Reference Design to Get Started

	**16-Button Keypad using the LDC1314 Inductive-to-Digital Converter** Reference Design - **TIDA-00509**	**Key Features** • Contactless buttons with superior reliability over electrical/mechanical contact solutions • Support simultaneous button presses	**TI Devices** LDC1314 LP2985-N MSP430F5528
	**Backlight and Smart Lighting Control by Ambient Light and Proximity Sensor** Reference Design - **TIDA-00373**	**Key Features** • Good Human Eye Spectral Matching • Dynamically Adjusts Backlight Brightness • UV Filter for Outdoor Using	**TI Devices** OPT3001 FDC1004 HDC1000 MSP430FR5969

Ambient Light Sensor with Human Eye Visibility

The OPT3001 is a single-chip lux meter, measuring the intensity of light as visible by the human eye. The precision spectral response and strong IR rejection of the device enables the OPT3001 to accurately meter the intensity of light as seen by the human eye regardless of light source. The strong IR rejection also aids in maintaining high accuracy when industrial design calls for mounting the sensor under dark glass for aesthetics.

Spectral Response: The OPT3001 and Human Eye



Amplifier and Comparator Solutions

Texas Instruments delivers a broad portfolio of amplifier and linear solutions including precision and high speed op amps, instrumentation and differential amplifers along with comparators. TI has an amplifier suited for any application.

Learn more about Amplifier solutions at: **www.ti.com/amplifier**

Low Power Amplifiers

Part No.	Supply Range (V)	Channels	Iq per ch. (Max) (mA)	GBW (Typ) (MHz)	Slew Rate (Typ) (V/µs)	CMRR (Typ) (dB)	Offset Voltage @ 25°C (Max) (mV)	Offset Drift (Typ) (µV/°C)	Rail-Rail	Operating Temp. (°C)	Approx. Price (US$ I 1ku)
LMV611/2/4	1.8 to 5.5	1 / 2 / 4	0.21	1.5	0.42	60	4	5.5	RRIO	–40 to 125	0.22 / 0.25 / 0.30
LPV521	1.6 to 5.5	1	0.0004	0.0062	0.0024	102	1	0.4	RRIO	–40 to 125	0.49
OPA369	1.8 to 5.5	1	0.0012	0.012	0.005	100	0.75	0.4	RRIO	–40 to 85	0.65
OPA349	1.8 to 5.5	1	0.002	0.065	0.02	52	10	15	RRIO	0 to 70	0.50

General Purpose Amplifiers

Part No.	Supply Range (V)	Channels	Iq per ch. (Max) (mA)	GBW (Typ) (MHz)	Slew Rate (Typ) (V/µs)	CMRR (Typ) (dB)	Offset Voltage @ 25°C (Max) (mV)	Offset Drift (Typ) (µV/°C)	Operating Temp. (°C)	Approx. Price (US$ I 1ku)
TLC271/2/4	3 to 16	1 / 2 / 4	1.6	1.7	3.6	65	10	1.8	–40 to 85	0.31 / 0.41 / 0.60
LM2904	3 to 26	2	0.6	0.7	0.3	50	7	7	–40 to 125	0.07
LM358	3 to 32	2	0.6	0.7	0.3	65	7	7	0 to 70	0.07
OPAx313	1.8 to 5.5	1, 2, 4	0.06	1	0.5	70	2.5	2	-40 to 125	0.26 / 0.38 / 0.55
OPAx314	1.8 to 5.5	1, 2, 4	0.21	3	1.5	75	2.5	1	-40 to 125	0.30 / 0.45 / 0.65
OPAx316	1.8 to 5.5	1, 2, 4	0.5	10	6	76	2.5	2	-40 to 125	0.48 / 0.72 / 1.08
OPAx170	2.7 to 36	1, 2, 4	0.145	1.2	0.5	104	1.8	0.3	-40 to 125	0.40 / 0.60 / 0.90
OPAx171	2.7 to 36	1, 2, 4	0.595	3	1.5	104	1.8	0.3	-40 to 125	0.40 / 0.60 / 0.90
OPAx172	2.7 to 36	1, 2, 4	1.8	10	10	90	1	0.3	-40 to 125	0.65 / 0.99 / 1.49

Comparators

Part No.	Type	Supply Range (V)	Channels	tRESP Low-to-High (µs)	Iq per ch. (Max) (mA)	Input Bias Current (±) (Max) (nA)	VICR (V)	Offset Voltage @ 25°C (Max) (mV)	Operating Temp. (°C)	Approx. Price (US$ I 1ku)
TLV3691	Push-Pull	0.9 to 6.5	1	24	0.00015	0.1	-0.1 to 6.6	15	–40 to 85	0.40
TLV3012	Push-Pull	1.8 to 5.5	1	6	0.005	0.01	-0.2 to 5.7	12	–40 to 85	0.75
TLC3702	Push-Pull	3 to 16	2	1.1	0.02	0.03	0 to 15	5	–40 to 85	0.36
TLV1701/2/4	Open Collector	2.2 to 36	1, 2, 4	0.56	0.075	15	2.2 to 36	2.5	-40 to 125	0.38 / 0.61 / 0.97

Analog-to-Digital Converters

Part No.	Type	Resolution (bits)	Sample Rate (SPS)	Input Channels	Interface	Supply Range (V)	Features	Operating Temp. (°C)	Approx. Price (US$ I 1ku)
ADS7040/1/2/3/4	SAR	8 to 12	1000	1	SPI	0 to 3.6	Nanowatt Power Consumption	-40 to 125	1.00 / 1.60 / 2.10
ADS1018	ΣΔ	12	3300	4	SPI	2 to 5.5	Temp. Sensor (0.5°C accurate)	-40 to 125	1.15
ADS1120/1220	ΣΔ	16, 24	2000	4	SPI	2.3 to 5.5	Single cycle setting, sensor, IDACs	-40 to 125	3.15 / 3.95

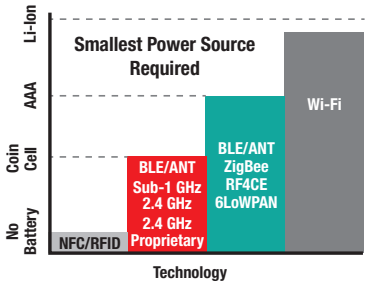
Wireless Connectivity

With the industry's broadest wireless connectivity portfolio TI offers cost-effective, low-power solutions for short-range, long-range, mesh, and IP networks

Learn more about Wireless Connectivity solutions at:
www.ti.com/wireless



Wi-Fi

Part No.	Benefits	TI Designs and Development Tools
CC3200	SimpleLink Wi-Fi Wireless MCU with ARM Cortex®-M4, Integrated Wi-Fi Connectivity, security, low power, ease of use: Certified Wi-Fi modules available	CC3200MODLAUNCHXL, TIDA-00372, TIDC-CC3200SMARTPLUG, TIDC-CC3200CAMBOOST
CC3100	SimpleLink Wi-Fi Wireless Network Processor: provides easy Wi-Fi connectivity for building automation applications. Fully integrated 802.11 b/b/n radio, baseband, and MAC. Connect serialy Interface to any 8, 16, or 32-bit micro-controllers. Certified Wi-Fi modules available	CC3100MODBOOST
WL1837MOD	High performance, low power, certified combo modules integrating Wi-Fi + Bluetooth + Bluetooth Low Energy. Connects to any Linux Processor with SDIO interface, available up to 85°C, 2.4GHz and 5GHz	WL1837MODCOM8I

Sub-1GHz

Part No.	Benefits	TI Designs and Development Tools
CC1200	High performance, long distance, low power radio transceiver: optimized for wide band applications	CC1200DK, CC1200EMK-868-930, TIDC-CHN
CC1120	High performance, long distance, low power radio transceiver: optimized for Narrowband	CC1120DK, CC1120EMK-169, CC1120EMK-420-470, CC1120EMK-868-915, TIDC-MULTIBAND-WMBUS
CC1101	Ultra-low power radio transceiver	CC1101DK433, CC1101DK868-915, TIDM-SUB1GHZ-MESH-NETWORK
CC1310	SimpleLink Ultra-low power ARM® Cortex®-M Based Wireless MCU	TIDA-00484

Bluetooth®

Part No.	Benefits	TI Designs and Development Tools
CC2650	SimpleLink Wi-Fi Ultra-Low power ARM® Cortex®-M Based Wireless MCU: multi-standard supported Bluetooth Low-Energy, 6LowPAN and ZigBee. Ideal for end point sensors	CC2650DK, CC2650STK, TIDA-00374
CC2640	SimpleLink Wi-Fi Ultra-Low power ARM® Cortex®-M Based Wireless MCU supporting Bluetooth Low-Energy: ultra-low power, small size and ease of use. Ideal for end point sensors	CC2650DK, CC2650STK, TIDA-00374
CC2540T	Extreme temperature Bluetooth Low Energy (up to 125 degree C) wireless MCU combined with low power and ease of use	CC2541DK-MINI, TIDC-BLUETOOTH-LOW-ENERGY-LONG-RANGE, TIDC-BLUETOOTH-SMART-TO-RS-485-GATEWAY
CC2564MODA	Dual Mode Bluetooth (Bluetooth Low energy + Bluetooth Classic) transceivers module with antenna integrated: low-power, stable and robust SW stack	CC256XQFNEM CC2564MODAEM (RTM September)

ZigBee®

Part No.	Benefits	TI Designs and Development Tools
CC2630	SimpleLink Wi-Fi Ultra-Low power ARM® Cortex®-M Based Wireless MCU : ideal for end point sensors	CC2650DK, CC2650STK, TIDA-00374
CC2530	ZigBee Wireless MCU: enables robust network nodes to be built with very low total bill-of-material costs	CC2530DK, CC2530EMK, CC2531EM-IOT-HOME-GATEWAY-RD, CC2530-CC2592EM-RD
CC2538	512kB ARM® Cortex®-M Based Wireless MCU: handle complex network stacks with security, demanding applications, and over-the-air download	CC2538DK, CC2538EMK, TIDC-ZNP-HOST-SW3

NFC

Part No.	Benefits	TI Designs and Development Tools
RF430FRL152H	13.56-MHz transponder chip with a programmable 16-bit MSP430 low-power microcontroller. Optimized for operation in fully passive (battery-less) or single-cell battery-powered (semi-active) mode.	TIDM-RF430-TEMPSENSE, TIDM-RF430FRLSENSE
RF430CL330H	NFC Tag Type 4 device which combines a wireless NFC interface and a wired SPI/I2C interface to connect the device to a host	TIDA-00217

**Quantities of 1,000 begin at this suggested resale price in U.S. dollars.*

*New products are listed in **bold red.***

Wireless Connectivity

Find the Perfect Connectivity Reference Design to Get Started			
	**SimpleLink™ *Bluetooth* Smart®/ Multi-Standard SensorTag** Reference Design - **CC2650STK-RD**	**Key Features** • More Sensors! 10 Sensors including light, humidity, pressure, magnetic, accelerometer, gyroscope, and others • Flexibility for IoT applications; Enable ZigBee or 6LoWPAN through a firmware upgrade	**TI Devices** CC2650 TMP007 OPT3001 HDC1000
	**Wired (UART or RS-485) to Wi-Fi® Bridge with 24-VAC Power** Reference Design - **TIDA-00375, TIDA-00485, TIDA-00486**	**Key Features** • Add Wi-Fi® Connectivity to an existing wired network • Wide Input Voltage Range of 18- to 30-VAC, 12- to 48-VDC • Galvanically Isolated or Non-Isolated variations	**TI Devices** CC3200MOD CC3100MOD LM5160 LMR16006
	**Battery-less NFC/RFID Temperature Sensing Patch** Reference Design - **TIDM-RF430-TEMPSENSE**	**Key Features** • No batteries required • "Over the air" configuration of the ADC • Different antenna configurations allow many form factors	**TI Devices** RF430FRL152H
	**Dynamic Field Powered NFC Reference Design for Data Logging and Security Applications** Reference Design - **TIDA-00217**	**Key Features** • User can receive updated information from a field unit • Battery-less sensor interface; NFC reader provides	**TI Devices** TMP103 RF430CL330H MSP430FR5969
	**SimpleLink™ Wi-Fi® CC3200 Smart Plug** Reference Design - **TIDC-CC3200SMARTPLUG**	**Key Features** • Single-Phase energy measurement that calculates Current, Voltage, Power, and Energy • SimpleLink™ Wi-Fi® connectivity over 802.11 b/g/n networks from any mobile device • Isolated flyback power supply to provide Constant-Voltage and Constant-Current output regulation without optical coupler"	**TI Devices** CC3200 UCC28910 TPS61097A-33

Embedded Processing Solutions

Microcontrollers and processors from Texas Instruments offer a broad range of performance and power consumption options. From MSP430 MCU with ultra-low power consumption to the Sitara™ AM335x family with integrated multi-protocol industrial communications support to connect various kinds of sensors in real-time for better automation; TI is tailored to meet your design challenges.

Find the Perfect MCU Reference Design to Get Started			
	**Thermostat Implementation with FRAM Microcontroller** Reference Design - **TIDM-FRAM-THERMOSTAT**	**Key Features** • 0°C to 35°C Temperature Measurement with 0.1°C Resolution • 3.4 inch LCD Display • Ultra-Low Power: 1.8 µA Standby Current	**TI Devices** MSP430FR4133 SN65HVD75 TPS782
	**Smoke Detector with Ultra Low Power MCU** Reference Design - **TIDM-G2xxSMOKEDETECTOR**	**Key Features** • Passive infrared (PIR) smoke chamber with discrete Amplification circuitry to ADC input • Low power (2.07 µA) and small code size (<1 KB Flash) • One timer and multiple GPIOs for proprietary comms	**TI Devices** OPT3001 FDC1004 HDC1000 MSP430FR5969

FRAM Technology

Ferroelectric Random Access Memory (FRAM) is a memory technology that combines the best of Flash and SRAM. It is non-volatile like Flash, but offers fast and low power writes, write endurance of 10^{15} cycles, code and data security that is less vulnerable to attackers than Flash/EEPROM, resistance to radiation and electromagnetic fields, and unmatched flexibility. This memory technology has been around for decades, but is now being integrated in MSP430 ultra-low-power microcontrollers (MCUs) to bring its unique advantages to real-world applications such as energy harvesting, data security, remote sensing or data logging, and many others.

All-in-one: FRAM MCU delivers max benefits				
Specifications	FRAM	SRAM	EEPROM	Flash
Non-volatile Retains data w/o power	Yes	No	Yes	Yes
Write speed (13 KB)	10ms	<10ms	2 secs	1 sec
Average active Power [µA/MHz] 16 bit word access by the CPU	100	<60	50,000+	230
Write endurance	10^{15}	Unlimited	100,000	10,000
Soft Errors	Below Measurable Limits	Yes	Yes	Yes
Bit-wise programmable	Yes	Yes	No	No
Unified Memory Flexible code and data partitioning	Yes	No	No	No

Power Management

Texas Instruments offers complete power solutions with a full line of high-performance products. These products, which range from standard linear regulators to highly efficient DC/DC converters and battery management, are tailored to meet your design challenges.

Learn more about Power Management solutions at: **www.ti.com/power** and **www.ti.com/powerlab**

DC/DC Switching Regulators

Part No.	Topology	Supply Range (V)	Output Voltage (V)	Output Current (Max) (A)	Switching Frequency (Max) (kHz)	Duty Cycle (Max) (%)	Iq (Typ) (mA)	Operating Temp. (°C)	Pin / Package	Approx. Price (US$ I 1ku)
Vin < 24V

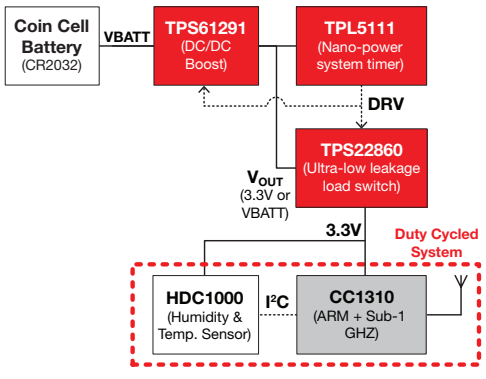
Duty-Cycled Power Design Theory for Star Networks

One method to achieve extremely long battery life is through the use of a nano-power system timer. This type of device is intended to replace the internal timer of any standard microcontroller with a discrete analog system timer that consumes much less power than the MCUs internal timer. The nano-power timer can also bring an MCU out of sleep mode by means of a pin interrupt, or to completely shut off power to the system, in whole, or in part. This reduces the system off-state current draw to the tens or hundreds of nanoamps.



TIDA-00484 Block Diagram which Demonstrates a Duty-Cycled Sensor Node

Power Management

Find the Perfect Low Power Reference Design to Get Started			
	**Humidity & Temp Sensor Node for 2.4-GHz Star Networks Enabling 10+ Year Coin Cell Battery Life** Reference Design - **TIDA-00374**	**Key Features** • Use of nano-power system timer results in 10+ years of battery life on a coin cell battery • ±3% relative humidity accuracy, ±0.2°C temperature accuracy	**TI Devices** TPL5110 TS5A3160 CC2650 HDC1000
	**Humidity & Temp Sensor Node for Sub 1-GHz Star Networks Enabling 10+ Year Coin Cell Battery Life** Reference Design - **TIDA-00484**	**Key Features** • Use of nano-power system timer results in 10+ years of battery life on a coin cell battery • ±3% relative humidity accuracy, ±0.2°C temperature accuracy	**TI Devices** TPL5111 TPS22860 TPS61291 CC1310
	**Energy Buffering for Long-Life Battery Applications** Reference Design - **PMP9753**	**Key Features** • Efficient Super Capacitor Charging • Peak Power Assistance • Longer Battery Runtime	**TI Devices** TPL5110 TS5A3160 CC2650 HDC1000
	**110-VAC to 5-VDC @ 30-mA Non-Isolated Power Supply Reference Design** Reference Design - **TIDA-00379**	**Key Features** • Solution does not require a custom transformer • Optimized, low-cost BOM • Output ripple of less than 10-mV	**TI Devices** UCC28880 LP2985-50

Haptic

Texas Instruments offers a complete line of haptic devices which have the ability to drive eccentric rotating mass (ERM), linear resonant actuator (LRA), and piezoelectric actuators. With TI's haptic drivers you can add that extra sensory element that is missing in modern day touch interfaces.

Learn more about Haptic Feedback solutions at: **www.ti.com/haptics**

Piezo Driver

Part No.	Maximum Differential Output Voltage (Vpp)	Maximum Single-Ended Output Voltage (Vp)	Supply Voltage (V)	Small-signal Bandwidth (kHz)	Gain-Bandwidth (kHz)	Load Capacitance (µF)	Slew Rate (V/µs)	Operating Temp. (°C)	Pin / Package	Approx. Price (US$ I 1ku)
DRV2700	±100	1000	3 to 5.5	20	550	4.7	0.6	–40 to 85	QFN	4.95

Haptic Driver

Part No.	Haptic Acutator Type	Input Signal	Supply Voltage (V)	Startup Time (ms)	Vout (Max) (V)	Iq (Typ) (mA)	Shutdown Current (Typ) (uA)	Operating Temp. (°C)	Pin / Package	Approx. Price (US$ I 1ku)

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as “components”) are sold subject to TI’s terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI’s terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers’ products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers’ products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI’s goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or “enhanced plastic” are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have ***not*** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
