SG7912AIG**

Negative Fixed Voltage Regulator

DESCRIPTION

The SG79xxA/SG79xx series of negative regulators offer self-contained, fixed-voltage capability with up to 1.5A of load current and input voltage up to -30V. With a variety of output voltages this regulator series is an optimum complement to the SG7800A/SG7800 positive three terminal regulators.

These units feature a unique band gap reference which allows the SG79xxA series to be specified with an output voltage tolerance of $\pm 1.5\%$.

The SG79xxA versions also offer much improved line regulation characteristics. All protective features of thermal shutdown, current limiting, and safe-area

control have been designed into these units and since these regulators require only a single output capacitor (SG79xx series) or a capacitor and 5mA minimum load (SG120 series) for satisfactory performance, ease of application is assured.

Although designed as fixed-voltage regulators, the output voltage can be increased through the use of a simple voltage divider. The low quiescent drain current of the device insures good regulation when this method is used.

These devices are available in hermetically sealed TO-257 (both case grounded 'G' and isolated 'IG'), TO-3, TO-39, and LCC packages.

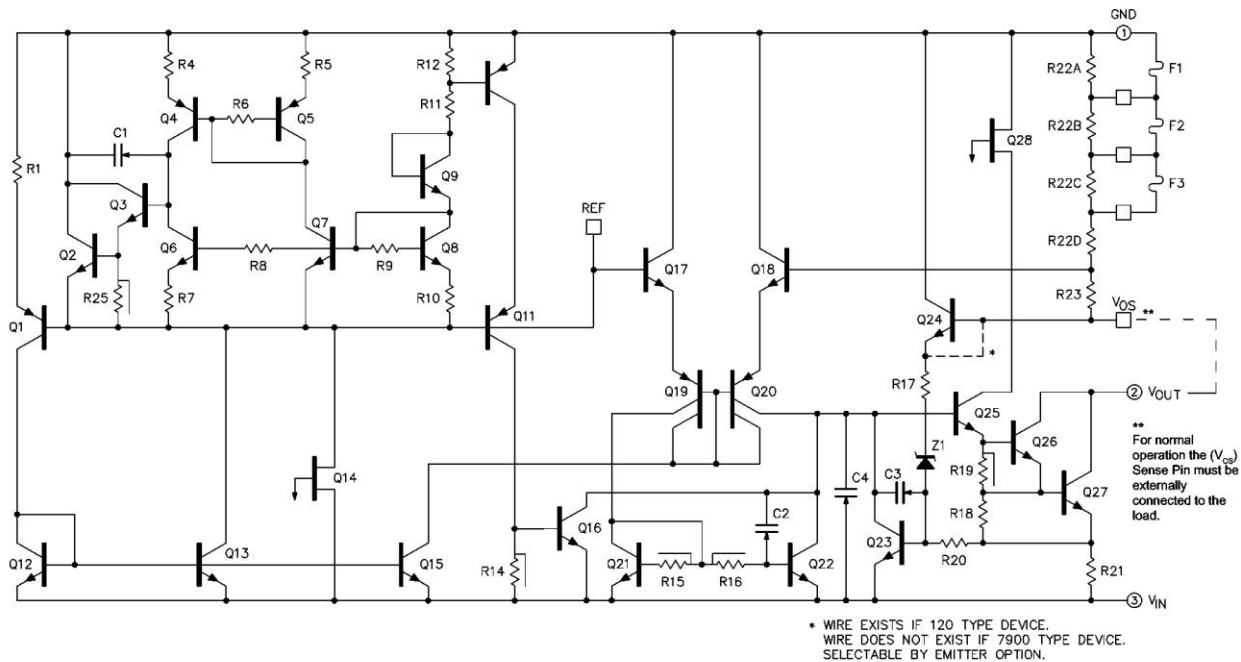

FEATURES

- Output Voltage Set Internally to $\pm 1.5\%$ on SG79xxA
- Output Current up to 1.5A
- Excellent Line and Load Regulation
- Foldback Current Limiting
- Thermal Overload Protection
- Voltages Available: -5V, -12V, -15V
- Contact Factory for Other Voltage Options
- Available in Surface Mount Package

HIGH RELIABILITY FEATURES

- Available to MIL-STD - 883, ¶ 1.2.1
- MIL-M38510/11501BXA - SG7905T-JAN
- MIL-M38510/11505BYA - SG7905K-JAN

ABSOLUTE MAXIMUM RATINGS

Parameter	Value	Units
Device Output Voltage	-5, -12, -15	V
Input Voltage	-35, -40 ($V_{OUT} \leq -15V$)	V
Input Voltage Differential (Output Shorted to Ground)	35	V
Operating Junction Temperature	150	°C
Storage Temperature Range	-65 to 150	°C
Lead Temperature (Soldering 10 seconds)	300	°C

Note: Exceeding these ratings could cause damage to the device. All voltages are with respect to Ground. Currents are positive into, negative out of specified terminal.

Notes:

- 1: Junction Temperature Calculation: $T_J = T_A + (P_D \times \theta_{JA})$.
- 2: The θ_{JA} numbers are guidelines for the thermal performance of the device/pc-board system. All of the above assume no ambient airflow.

APPLICATION INFORMATION

Figure 9 – Fixed Output Regulator

- Note:
1. C1 is required only if regulator is separated from rectifier filter.
 2. Both C1 and C2 should be low E.S.R. types such as solid tantalum. If aluminum electrolytic capacitors are used, at least 10 times values shown should be selected.
 3. If large output capacities are used, the regulators must be protected from momentary input shorts. A high current diode is indicated from output to input.

Figure 10 – Circuit for Increasing Output Voltage

- Note: C3 optional for improved transient response and ripple rejection.

$$V_{\text{OUT}} = V(\text{REGULATOR}) \frac{R_1 + R_2}{R_1}$$

$$R_2 = \frac{V(\text{REG})}{15\text{mA}}$$
