

**THE DATASHEET OF  
ADG5412FTRUZ-EP**

## FEATURES

- Overvoltage protection up to  $-55\text{ V}$  and  $+55\text{ V}$
- Power-off protection up to  $-55\text{ V}$  and  $+55\text{ V}$
- Overvoltage detection on source pins
- Low on resistance:  $10\ \Omega$
- On-resistance flatness:  $0.5\ \Omega$
- $5.5\text{ kV}$  human body model (HBM) ESD rating
- Latch-up immune under any circumstance
- Known state without digital inputs present

## ENHANCED PRODUCT FEATURES

- Supports defense and aerospace applications (AQEC standard)
- Military temperature range:  $-55^\circ\text{C}$  to  $+125^\circ\text{C}$
- Controlled manufacturing baseline
- One assembly/test site
- One fabrication site
- Enhanced product change notification
- Qualification data available on request

## APPLICATIONS

- Avionics
- Analog input/output modules
- Process control/distributed control systems
- Data acquisition
- Instrumentation
- Automatic test equipment
- Communication systems
- Relay replacement

## GENERAL DESCRIPTION

The [ADG5412F-EP](#) contains four independently controlled single-pole/single-throw (SPST) switches. The [ADG5412F-EP](#) has four switches that turn on with Logic 1 inputs. Each switch conducts equally well in both directions when on, and each switch has an input signal range that extends to the supplies. The digital inputs are compatible with 3 V logic inputs over the full operating supply range.

When no power supplies are present, the switch remains in the off condition, and the switch inputs are high impedance. Under normal operating conditions, if the analog input signal levels on any  $S_x$  pin exceed  $V_{DD}$  or  $V_{SS}$  by a threshold voltage,  $V_T$ , the switch turns off. Input signal levels up to  $+55\text{ V}$  or  $-55\text{ V}$  relative to ground are blocked, in both the powered and unpowered condition.

The low on resistance of these switches, combined with on-resistance flatness over a significant portion of the signal range make them an ideal solution for data acquisition and gain

switching applications where excellent linearity and low distortion are critical.

## PRODUCT HIGHLIGHTS

1. Source pins are protected against voltages greater than the supply rails, up to  $-55\text{ V}$  and  $+55\text{ V}$ .
2. Source pins are protected against voltages between  $-55\text{ V}$  and  $+55\text{ V}$  in an unpowered state.
3. Overvoltage detection with digital output indicates operating state of switches.
4. Trench isolation guards against latch-up.
5. Optimized for low on resistance and on-resistance flatness.
6. The [ADG5412F-EP](#) can be operated from a dual supply of  $\pm 5\text{ V}$  up to  $\pm 22\text{ V}$  or a single power supply of  $+8\text{ V}$  up to  $+44\text{ V}$ .

Additional application and technical information can be found in the [ADG5412F](#) data sheet.

| I <sub>SS</sub>                                    | 0.5   |                |                 | mA typ  |  |
|  | 1.0   |                | 1.8             | mA max  |  |
| V <sub>DD</sub>                                    |       |                | 8               | V min   | GND = 0 V  |
|  |       |                | 44              | V max   | GND = 0 V  |

<sup>1</sup> Guaranteed by design; not subject to production test.

**CONTINUOUS CURRENT PER CHANNEL, Sx OR Dx**

Table 5.

| Parameter  | 25°C | 85°C | 125°C | Unit   | Test Conditions/Comments                                 |
|--|------|------|-------|--------|--|
| 16-LEAD TSSOP<br>$\theta_{JA} = 112.6^{\circ}\text{C/W}$ | 83   | 59   | 39    | mA max | $V_S = V_{SS} + 4.5\text{ V}$ to $V_{DD} - 4.5\text{ V}$ |
|  | 64   | 48   | 29    | mA max | $V_S = V_{SS}$ to $V_{DD}$                               |

## ABSOLUTE MAXIMUM RATINGS

$T_A = 25^\circ\text{C}$ , unless otherwise noted.

**Table 6.**

| Parameter   | Rating   |
|---|--|
| $V_{DD}$ to $V_{SS}$  | 48 V   |
| $V_{DD}$ to GND   | -0.3 V to +48 V  |
| $V_{SS}$ to GND   | -48 V to +0.3 V  |
| Sx Pins to GND  | -55 V to +55 V   |
| Sx to $V_{DD}$ or $V_{SS}$  | 80 V   |
| $V_S$ to $V_D$  | 80 V   |
| Dx Pins <sup>1</sup>  | $V_{SS} - 0.7\text{ V}$ to $V_{DD} + 0.7\text{ V}$ or<br>30 mA, whichever occurs first |
| Digital Inputs  | GND - 0.3 V to +48 V   |
| Peak Current, Sx or Dx Pins                                       | 288 mA (pulsed at 1 ms,<br>10% duty cycle maximum)                                     |
| Continuous Current, Sx or Dx Pins                                 | Data <sup>2</sup> + 15%  |
| Digital Output  | GND - 0.3 V to 6 V or 30 mA,<br>whichever occurs first                                 |
| Operating Temperature Range                                       | -55°C to +125°C  |
| Storage Temperature Range   | -65°C to +150°C  |
| Junction Temperature  | 150°C  |
| Thermal Impedance, $\theta_{JA}$                                  |  |
| 16-Lead TSSOP, $\theta_{JA}$ Thermal<br>Impedance (4-Layer Board) | 112.6°C/W  |
| Reflow Soldering Peak<br>Temperature, Pb Free                     | As per JEDEC J-STD-020   |
| ESD (HBM: ANSI/ESD STM5.1-2007)                                   |  |
| Input/Output Port to Supplies                                     | 5.5 kV   |
| Input/Output Port to<br>Input/Output Port                         | 5.5 kV   |
| All Other Pins  | 5.5 kV   |

<sup>1</sup> Overvoltages at the Dx pins are clamped by internal diodes. Limit current to the maximum ratings given.

<sup>2</sup> See Table 5.

Stresses at or above those listed under Absolute Maximum Ratings may cause permanent damage to the product. This is a stress rating only; functional operation of the product at these or any other conditions above those indicated in the operational section of this specification is not implied. Operation beyond the maximum operating conditions for extended periods may affect product reliability.

Only one absolute maximum rating can be applied at any one time.

### ESD CAUTION

#### ESD (electrostatic discharge) sensitive device.

Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

## PIN CONFIGURATION AND FUNCTION DESCRIPTIONS

Figure 2. Pin Configuration

Table 7. Pin Function Descriptions

| Pin No. | Mnemonic        | Description   |
|---------|-----------------|---|
| 1       | IN1             | Logic Control Input.  |
| 2       | D1              | Drain Terminal. This pin can be an input or an output.  |
| 3       | S1              | Overvoltage Protected Source Terminal. This pin can be an input or an output.   |
| 4       | V <sub>SS</sub> | Most Negative Power Supply Potential.   |
| 5       | GND             | Ground (0 V) Reference.   |
| 6       | S4              | Overvoltage Protected Source Terminal. This pin can be an input or an output.   |
| 7       | D4              | Drain Terminal. This pin can be an input or an output.  |
| 8       | IN4             | Logic Control Input.  |
| 9       | IN3             | Logic Control Input.  |
| 10      | D3              | Drain Terminal. This pin can be an input or an output.  |
| 11      | S3              | Overvoltage Protected Source Terminal. This pin can be an input or an output.   |
| 12      | FF              | Fault Flag Digital Output. This pin has a high output when the device is in normal operation or a low output when a fault condition occurs on any of the Sx inputs. |
| 13      | V <sub>DD</sub> | Most Positive Power Supply Potential.   |
| 14      | S2              | Overvoltage Protected Source Terminal. This pin can be an input or an output.   |
| 15      | D2              | Drain Terminal. This pin can be an input or an output.  |
| 16      | IN2             | Logic Control Input.  |

Table 8. ADG5412F-EP Truth Table

| INx | Switch Condition (S1 to S4) |
|-----|-----------------------------|
| 1   | On                          |
| 0   | Off                         |
