\*1. The letter "d" indicates the distance between the top surface of the sensor and the sensing object.

\*2. Depends on the installed condition of the Photomicrosensor, the detector may receive the sensor's LED light and/or the external light which is reflected from surroundings of the Photomicrosensor and/or the background object.

Please confirm the condition of the Photomicrosensor by actual intended application prior to the mass production use.

**■ Precautions to be taken on mounting**

**Temperature Profile**

The reflow soldering can be implemented in two times complying with the following diagram.

All the temperatures in the product must be within the diagram.

**Treatment after Opening**

1. Reflow soldering must be done within 48 hours stored at the conditions of humidity 60%RH or less and temperature 5 to 25°C.
2. In case of long time storage after open, please mount at the conditions of humidity 70%RH or less and temperature 5 to 30°C within 1 week by using dry box or resealing with desiccant in moisture-proof bag by sealer.

**Baking before Mounting**

In case that it could not carry out the above treatment, it is able to mount by baking treatment.

However baking treatment shall be limited only 1 time.

- Recommended conditions :
- 60°C, 12 to 24 hours (reeled one)
  - 100°C, 8 to 24 hours (loose one)

**Manual soldering**

The manual soldering cannot be applied to the products.

There is a possibility that the housing is deformed and/or Au plating is peeled off by heat.

**Other Notes**

The use of infrared lamp causes the temperature at the resin to rise particularly too high.

All the temperatures in the product must be within the above diagram.

Do not immerse the resin part into the solder.

Even if within the above temperature diagram, there is a possibility that the gold wire in the products is broken in case that the deformation of PCB gives the stress to the product terminals.

Please confirm the conditions of the reflow soldering fully by actual solder reflow machine prior to the mass production use.

**■ Storage and Handling after Opening**

**Storage Conditions**

In order to avoid the absorption of moisture, the products shall be stored in a dry box with desiccant or in the following conditions.

Storage temp. : 5 to 30°C

Storage humidity : 70%RH or less
