EV\_IDG-2030U**

Miniature Dual-Axis OIS Optimized MEMS Gyroscope

**GENERAL DESCRIPTION**

The IDG-2030U (roll & pitch) dual-axis MEMS angular rate sensor is designed for optical image stabilization (OIS) applications in camera modules found in smart phones and other mobile devices.

The OIS gyro includes a narrow programmable full-scale range of  $\pm 46.5$ ,  $\pm 93$ ,  $\pm 187$ , and  $\pm 374$  degrees/sec, fast sampling of the gyro output at up to 32KHz, low phase delay including a fast 20MHz read-out through SPI interface, very low rate noise at 5mdps/vHz and extremely low power consumption at 2.7 mA. Factory-calibrated initial sensitivity reduces production-line calibration requirements.

The space saving 2.3 x 2.3 x 0.65mm LGA surface mount package is reflow solder compatible and RoHS compliant. The IDG-2030U is pin and function compatible to IDG-2030.
