

THE DATASHEET OF MAX4731EBL+T

50Ω, Dual SPST Analog Switches in UCSP

General Description

The MAX4731/MAX4732/MAX4733 low-voltage, dual, single-pole/single-throw (SPST) analog switches operate from a single +2V to +11V supply and handle rail-to-rail analog signals. These switches exhibit low leakage current (0.1nA) and consume less than 0.5nW (typ) of quiescent power, making them ideal for battery-powered applications.

When powered from a +3V supply, these switches feature 50Ω (max) on-resistance (R_{ON}) with 3.5Ω (max) matching between channels, and 9Ω (max) flatness over the specified signal range.

The MAX4731 has two normally open (NO) switches, the MAX4732 has two normally closed (NC) switches, and the MAX4733 has one NO and one NC switch. The MAX4731/MAX4732/MAX4733 are available in 9-bump chip-scale packages (UCSP™), along with 8-pin TDFN and 8-pin μMAX® packages. The tiny UCSP occupies a 1.52mm × 1.52mm area and significantly reduces the required PC board area.

Applications

Battery-Powered Systems
Audio/Video-Signal Routing
Low-Voltage Data-Acquisition Systems
Cell Phones
Communications Circuits
PDAs

Features

- ◆ 1.52mm × 1.52mm UCSP Package
- ◆ Guaranteed On-Resistance (R_{ON})
25Ω (max) at +5V
50Ω (max) at +3V
- ◆ On-Resistance Matching
3Ω (max) at +5V
3.5Ω (max) at +3V
- ◆ Guaranteed < 0.1nA Leakage Current at
 $T_A = +25^\circ\text{C}$
- ◆ Single-Supply Operation from +2.0V to +11V
- ◆ TTL/CMOS-Logic Compatible
- ◆ -108dB Crosstalk (1MHz)
- ◆ -72dB Off-Isolation (1MHz)
- ◆ Low Power Consumption: 0.5nW (typ)
- ◆ Rail-to-Rail Signal Handling

50Ω, Dual SPST Analog Switches in UCSP

ABSOLUTE MAXIMUM RATINGS

(All voltages referenced to GND.)

V+-0.3V to +12V
IN_, COM_, NO_, NC_ (Note 1)-0.3V to (V+ + 0.3V)
Continuous Current (any pin)±10mA
Peak Current (any pin, pulsed at 1ms, 10% duty cycle)	...±20mA
Continuous Power Dissipation (T _A = +70°C)	
8-Pin μMAX (derate 4.5mW/°C above +70°C)362mW
8-Pin TDFN (derate 24.4mW/°C above +70°C)1951mW
9-Bump UCSP (derate 4.7mW/°C above +70°C)379mW

Operating Temperature Range-40°C to +85°C
Storage Temperature Range-65°C to +150°C
Maximum Junction Temperature+150°C
Lead Temperature (soldering, 10s)+300°C
Bump Temperature (soldering, Note 2)	
Infrared (15s)+220°C
Vapor Phase (60s)+215°C

Note 1: Signals on IN_, NO_, NC_, or COM_ exceeding V+ or GND are clamped by internal diodes. Limit forward-diode current to maximum current rating.

Note 2: This device is constructed using a unique set of packaging techniques that impose a limit on the thermal profile the device can be exposed to during board level solder attach and rework. This limit permits only the use of the solder profiles recommended in the industry-standard specification, JEDEC 020A, paragraph 7.6, Table 3 for IR/VPF and Convection reflow. Pre-heating is required. Hand or wave soldering is not allowed.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

ELECTRICAL CHARACTERISTICS—Single +3V Supply

(V+ = +3V ±10%, V_{IH} = +2.0V, V_{IL} = +0.8V, T_A = T_{MIN} to T_{MAX}, unless otherwise noted. Typical values are at V+ = +3V, T_A = +25°C.) (Notes 3, 4)

Note 3: The algebraic convention, where the most negative value is a minimum and the most positive value a maximum, is used in this data sheet.

Note 4: UCSP and TDFN parts are 100% tested at +25°C only, and guaranteed by design over temperature. μMAX parts are 100% tested at +85°C and +25°C and guaranteed by design over temperature.

Note 5: ΔR_{ON} = R_{ON}(MAX) - R_{ON}(MIN).

Note 6: UCSP on-resistance matching between channels and on-resistance flatness guaranteed by design.

Note 7: Flatness is defined as the difference between the maximum and minimum value of on-resistance as measured over the specified analog signal range.

Note 8: Guaranteed by design.

Note 9: Off-Isolation = 20 log₁₀ (V_{NO}/V_{COM}), V_{NO} = output, V_{COM} = input to off switch.

Note 10: Between any two switches.

Applications Information

Operating Considerations for High-Voltage Supply

The MAX4731/MAX4732/MAX4733 operate to +11V with some precautions. The absolute maximum rating for V+ is +12V (referenced to GND). When operating near this region, bypass V+ with a minimum 0.1μF capacitor to ground as close to the IC as possible.

Logic Levels

The MAX4731/MAX4732/MAX4733 are TTL compatible when powered from a single +5V supply. When powered from other supply voltages, the logic inputs should be driven rail-to-rail. For example, with a +11V supply, IN1 and IN2 should be driven low to 0V and high to 11V. With a +3.3V supply, IN1 and IN2 should be driven low to 0V and high to 3.3V. Driving IN1 and IN2 rail-to-rail minimizes power consumption.

50Ω, Dual SPST Analog Switches in UCSP

Analog Signal Levels

Analog signals that range over the entire supply voltage (GND to V+) pass with very little change in R_{ON} (see *Typical Operating Characteristics*). The bidirectional switches allow NO_, NC_, and COM_ connections to be used as either inputs or outputs.

Power-Supply Sequencing and Overvoltage Protection

CAUTION: Do not exceed the absolute maximum ratings. Stresses beyond the listed ratings can cause permanent damage to the devices.

Proper power-supply sequencing is recommended for all CMOS devices. Always apply V+ before applying analog signals, especially if the analog signal is not current limited. If this sequencing is not possible, and if the analog inputs are not current limited to < 20mA, add a small-signal diode, D1, as shown in Figure 1. If the analog signal can dip below GND, add D2. Adding protection diodes reduces the analog signal range to a diode drop (about 0.7V) below V+ (for D1), and to a diode drop above ground (for D2). Leakage is unaffected by adding the diodes. On-resistance increases slightly at low supply voltages. Maximum supply voltage (V+) must not exceed +11V.

Adding protection diodes causes the logic thresholds to be shifted relative to the power-supply rails. The most significant shift occurs when using low supply voltages (+5V or less). With a +5V supply, TTL compatibility is not guaranteed when protection diodes are added. Driving IN1 and IN2 all the way to the supply rails (i.e., to a diode drop higher than the V+ pin, or to a diode drop lower than the GND pin) is always acceptable.

Protection diodes D1 and D2 also protect against some overvoltage situations. Using the circuit in Figure 1, no damage results if the supply voltage is below the absolute maximum rating (+12V) and if a fault voltage up to the absolute maximum rating (V+ + 0.3V) is applied to an analog signal terminal.

UCSP Applications Information

For the latest application details on UCSP construction, dimensions, tape carrier information, printed circuit board techniques, bump-pad layout, and recommended reflow temperature profile as well as the latest information on reliability testing results, go to the Maxim web site at www.maxim-ic.com/ucsp to find the Application Note: UCSP—A Wafer-Level Chip-Scale Package.
